what does this have to do with someone jacking someones elses business from
them.. were they in love?

>
> Dan may have 'lost' but at least he can say that he has been there and
done
> that!> I can't. Can you?

==========
been there and done what ??? take someones business from them and start with
another someone else, then things don't go as planned because the other guy
doesnt need him anymore, then start up again and fail... Yeah sounds like
something I want to do.. fuck someone(dave) by starting xforce, get fucked
by the next guy(xforce) then try to fuck a few more(dave&xforce) and start
another amp line then not succeed

>
> Tesla died a pauper, but I sure would have liked to have been there
working
> for, or with, that 'loser'!
==========
how many people did tesla screw over? besides 123 is no Tesla ...perhaps he
was his janitor ..

no i dont sell amps but for $200 or less anyone with a soldering iron can build the exact same 2x4 amp and not pay $475- $539.00 either... the amp builders pay about 25-35 buxs to have them built, its about a 3 hour job i have been told . What do you think is a fair mark up? i could get/sell you the parts in kit form and make money at the $200 price that would be a minimum of 5 How many would you like?

> Leland, Please explain to the group why a Class C amplifier will not
operate
> in the linear region of the transistors. While your at it also explain
what
> makes the amp your referring to Class C.

You are confusing two different things. You can use transistors in their "linear" region, but have them biased for non-linear class "C" operation. The class of an amplifier refers to the conduction angle of the power device referenced to a sine wave, class A is 360 degrees, class B 180 degrees, and class C is anything less than 180 degrees. A class C amplifier will clip off the bottom section of the audio modulation waveform, thus leaving the peak. The degree to which this occurs is determined by the conduction angle. Needless to say clipping the audio waveform generates harmonics, which the causes the signal to "spread out" frequency wise, which is the reason people who use them "wash" out so many adjacent channels, to the one being transmitted on.

Now using transistors in a non-linear section of the curves will cause IMD, intermodulation distortion, problems. That is all most as bad as using a class C amplifier for linear service. You can get IMD problems by overdriving an amplifier forcing it to go into it's "saturated" power region. You can see this when you crank up the drive power, and the amplifier output power does not increase in direct proportion.

It shouldn't be to hard to remote switch that amp. I believe someone posted a schematic once. But you should turn down the key on the radio 1.5 - 2 watts seems to be a place. If you have a good tech he should be able to dial it in for you. I believe x-force offered a integrated unit with 2 2290 driving 4.

bill, competition is the american way and so is stealing trade secrets whetеher you want to admitt it or not. i am sure mc donalds dont like burger king and pizza hut didnt like that one of the founders started pappa johns, royal vaccuums didnt like the fact that john kirby took there ideas and made kirby vaccuums. the public doesnt care who did what first they just care about who has the best price for a equal product. if davemades have the better price then x force wont last forever same thing goes for xforce if they have the better price. the dave versus danny thing is strictly between you insiders. amp customers across the country could careless about you guys personal troubles with each other as long as the amps keep comming as cheap as possible. besides, playing in a illegal game like amp building is bound to bring out some shady characters. that ough not be a suprise. anyways as you said before dave isnt even in the building of the solid state stuff so why are you still fighting a battle thats done and thru?

I agree - but at 27MHz this is really an un-issue. If you want better connectors, use N type. They are easier to put on anyway. You can actually swap out the SO239 on the radio with a chassis mount N(f) quite easily. This is if you are neurotic and want the lowest loss.

> I wouldn't mount it between the cab and bed, but either on the roof or on a

ok doc, then why is ok for a ham guy to make his own amp and they call
them 'type accepted' and use it for his purpose. then some other ham
guy makes them, doesn't get the fcc stamp of approval as if they needed
to be consulted on this matter, and then sells them to cbers. somehow
this does not compute. aren't the ones you guys make, just as big a
splatter boxes as the ones we use on cb?????? amd don't tell me that
some guys who fires up his homemade 3000a7 box at his base and starts
dxing using his ham callsign , doesn't get some of that on his
neighbors tv. it has to. i don't care what kind of filtering you put in
it. why is it what you guys make in the comfort of your room at home ,
then use on the air, why is that type accepted????????,......duck
hunter out.................

A wide-band HF amplifier should work perfectly on 27MHz. You will need one that requires 4W of excitation power to get maximum output. To my knowledge it isn't illegal to manufacture amplifiers that deliver full power to 30MHz and beyond. Any amplifier specifically made for the CB service is illegal for sale in the USA.

MC

since it not illegal to sell these items and it's not illegal to own them or
buy them , what the hell is the problem
the law states you cannot use them, you can have a hole house full of them
and nothing can be done unless they catch you actualy using the them.

they dont have the qauilty of the 2510 but can be modified for a good freq
coverage. 25 to 28 megs if my memory serves me right

There's a fluke with the PLL on that radio. If you turn the radio on, while holding the mic button down. The radio will come on in the normal cb radio freqs. Also they run hot so you can't tweak the power, but if turn the power down, tweak the modulation, and use a good power mic. It will sound like a big radio. They also make good low power drivers for a good amp. They are great 11 meter radios (after mod) and just so-so 10 meter radios.

LONG BEACH, CA: The FCC has written Technician licensee Brett C. Rogers, KF6ZDS, citing monitoring information before the Commission alleging that the licensee has operated Amateur Radio equipment on and between 11-meter Citizens Band channels. "Information further indicates that you have deliberately interfered with the communications of other operators, transmitted sound effects, utilized non type-accepted equipment and illegal amplifiers" on and between CB channels, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth wrote. "The District Director of our Los Angeles office warned you about this type of operation on December 23, 1999." Hollingsworth gave Rogers 30 days to explain "the full circumstances of any operation" the licensee may have conducted on 11 meters since January 1, 2000, and the equipment used.

Richard,

You are right. Somehow I just can't get enthused about Mega-watts since I have been able to work what I could hear (most of the time) with the stock radio. Even with being authorized 1500 watts, I have never owned a base amp. To me, they are just another maintenance headache and something to be constantly re-tuning for different bands, etc.

I am about to admit something. I hope you aren't one of the AM haters. LOL! I DO like to run a little bit of AM once in a while on 7295 and 3885. Since I am not one of the "serious" AMers, I do so with a Kenwood TS50/dipole, or my IC706 mobile with a homebrew screwdriver. Both run about 25 watts. I get FB results, and when conditions are good, I can talk most anywhere with that. I'm not about to go out and buy a Globe King, Viking, or a T368, either. It is just a novelty to me, and I do it occasionally. And there are a nice bunch of guys on AM who don't act rude or tell you to "hit the road". Anyway, power is NOT where it's at contrary to the opinion of the uneducated. I am more proud of a contact made with 25 watts than one with BIG watts.

Because Brian, Unlike your snot-nose
knowledge, he comes out here to answers questions.
Not like you, who tries to impress people with what
little you really know.
I talk to Dennis about once a week, and usually
not about radio's, so I don't know where you come off
with "people like me" attitude. Oh well at least I
only have to read your shit for a few more days.....
Then it's off to Cabo for a LOT of Beer, Women
& Fishing..... Go die Brian.....

The Landshark

Aaron, I think it's six of one, half dozen of the
other. I myself would skip the one w/built-in
SWR meter and buy separate one, that way I can
upgrade/experiment/help a friend at a later
point. But that's just me, this may be the last
CB you buy for a long time and if that's the
case, go for the one with the built-in feature.

CD,

I am gonna try to reply to this. I just hope that I don't say anything to aggravate your animosity towards hams. I am only trying to answer this as best I know how. I assure you anything I say is not meant to belittle, aggravate, or insult anyone.

1. Regardless of the propagation characteristics of 11 meters, it was originally intended as a short range, business/personal communications medium. Think of it as sort of the "cell phone" of the late '50s.

2. The originators of this service were NOT totally blind to the "skip" on this band. In order to minimize the effects, and because the intent of the CB service WAS short ranged, local communications, power was limited to 4 watts ERP. Many sets of the day were less efficient than others. With 5 watts of input, some of them only got 2 1/2 watts out--which was enough to do the job. This was also because, when CB first began to achieve some recognition, people were much more polite and would stand by for a "break". There were less people on the air, also, which stands to reason.

3. The airwaves are sort of like a garden hose. You can only cram so much traffic on a given frequency before the "hose" bursts. The idea was/is that stations using 4 watts, or less, even when skip was in, you could still conduct your business/family affairs over the CB radio without causing much difficulty for Joe Blow 800 miles away. Sure, he might hear you, and you might hear him, but you wouldn't prevent him from using his CB, and vice versa. That was one of the reasons for low power.

Before I continue, let me say I don't agree with some of the "do-gooders" in here that put CBers, and you will notice that you don't find me getting involved in very many arguments. I don't see the point. The reason I made this statement is becaus of what I am going to write next. It is the truth, and I also realize that someone states facts as best he knows them, people get upset and starting slinging fire and brimstone. Are you ready, CD? Please don't get mad.

4. The Amateur Service was created as a hobby. Radio was discovered and developed by "hams", if you will. As the technology developed, and an industry grew, there was more and more hobby communications. Each segment of radio--hobby and industry--complimented one another. As a "ham" discovered another new thing, or a better way of doing what was already known, industry adopted these new things. Of course, many innovations were developed by professional engineers, but Amateurs were right along with them. As the hobby, emergency services, and development aspects of ham radio grew, the more hams were encouraged to experiment. This exper-

mentation is the reason hams can build and use linear amps....up to a certain number a year and up to a certain power level. Of course, it somewhat has to do with the history of ham radio since it was experimenters like Marconi and others that gave us the vast radio and TV media that we enjoy now. That experimentation is still encouraged. One example is the "Screwdriver" antenna developed to its fruition by Don K. Johnson, W6AAQ, who was frustrated by the inability to change HF bands without getting out of the car. He developed several versions of a multi-band HF antenna, some of which worked, some of which didn't. He finally hit upon using a Skil cordless screwdriver to move the coil up or down as needed to cover all HF bands. Now the antenna is used, built and sold by hams all over the world as well as commercial and military. Ham radio, and the progression thru the various classes of licenses, is designed to TEACH its enthusiasts increasing amounts of electronic theory, RF propagation, circuitry, and operating practices. As the ham progresses thru the license "levels", he is <<supposed>> to know a certain amount of related subjects. WE could debate the status of current testing practices all day long (I don't want to get into that now), but LEARNING is what is "supposed" to take place. Therefore, as a ham reaches, say, General Class, he is allowed to have, purchase, or build linear amplifiers up to 1500 watts PEP. Hopefully, by the time he is able to construct an amp, he will have enough knowledge to do so without creating a "splatter box". Yes, that doesn't always happen--I already KNOW that. Lots of things are "suppposed" to work a certain way. But when you factor in people with different levels of learning, discipline, and attitudes, it won't always go as designed. Same with CB.

5. Because Amateur Radio is an integral part of our National communications infrastructure, it is recognized as a resource in times of emergencies. Yep, we have our bad apples, but in general, hams are recognized as having the discipline and the on-air operating procedures to se that messages get passed quickly and accurately. Sometimes amps are needed to see that the vital traffic goes thru. Welfare of our troops overseas is one of the reasons amps are allowed. Barry Goldwater, recently deceased, used his in passing hundreds of health and welfare messages to troops in Viet Nam.

Lastly, again because so many new innovations have come about thru the efforts (read-tinkering) of hams, the Fed doesn't want to quash that experimentation. Thus, amateur equipment isn't subject to the same kinds of standards as, say, CB, so far as type-accepting is concerned. Manufactured ham equipment IS, mostly, of high quality, and a Mfr. has to meet certain requirements before he can market a ham rig. But the door is left open for the ham to build transmitters, antennas, amps, gidgets, gadgets, widgets, wadgets because there just might arise some new thing, some new product to make our lives easier.

WHEW, CD I hope I have helped a little and that I haven't come across as one of those "uppity" <<hammies>> y'all talk about. I am trying to present as much as I can to answer your questions. As to the part of ham radio that you think is SOOO bad, I just wish you knew the ones I

know! I also know some who would turn in their own mother to FCC. It's not ham radio that is bad, it's just certain people. And if you choose not to become a part of it, that's your decision. But it offers so much more spectrum, so much more freedom than is up on the 26-28 MHZ area. When I run into a butt hole, I just go to another band.

The best 73,

Jerry
K4KWH

Hello Maveric: That' a pretty good question.

The way the SO-239 connector or even stripped back coax is attached to the antenna, works hand in hand in how and what the impedance matching circuit is.

Let me make a few suggestions here for you since I have done all this and still I keep thinking how a better impedance matching device / mounting design can be made.

Look at what is out there, it may make things a lot easier to get a old CB or 10 meter antenna and modify it for what you want. And give you an idea as to what you want to do in another design.

Insulating the vertical element, and the impedance matching circuit/device and attaching the SO-239, is pretty much half the battle. The vertical element can be placed in a "L" type bracket, insulated with a Grey PVC piece of pipe or coupling. The loss in the material is not a player because the metal will be sounding the vertical element. So expensive Teflon is not needed.

Keep the antenna height at 5/8 wavelength, and not 1/2 wavelength, the 5/8 is easier to match, and has less LOSS!

I have seen the vertical element bolted to a 2 x 4 with counter sinked bolts, and the 2 x 4 bolted to a mast, also using counter sinked bolts which insulates the vertical element from the mast.

A real sharp guy would come up with a vertical element directly attached to the mast, not requiring insulators, and uses a shut feed, with a broad band design. The Jo-Gunn and Wolf antenna use this direct technique, and then use a gamma match match for the impedance matching device. But Jo-Gunn does this by making the antenna just short of a 3/4 wl antenna, requiring a series capacitance to match the antenna. The sharp guy needs to keep the antennas at 5/8 wavelength, and make a broad band impedance matching device for a grounded vertical element, with good RF isolation from the coax line.

Actually NO. The Sigma 5/8 (older design) is NOT DC grounded. The
last versions of that antenna were. There is a fiberglass tube that
separates the radiating element from the ground plane. What I still don't
understand is the use of the loop. The loop on the Maco is to set the 50 ohm
point. It doesn't work that way on the Sigma 5/8.

No, I try not to get too wired about things that don't get me paid, laid, or fed. So far as linears go, the lower the freq the more power makes sense; somewhere around 20 MHz and up power makes less difference, that's all.

I lived thru the amateur AM wars the first time so I have no plans to fight them again. We will let Jesse Helms re-fight the battles of his youth. At the same time, I don't see a lot of sense in performing resurrections for no good reason including reviving skills from another age. If you choose to, fine. At 7295 you present no great danger to civilization as we know it. You can only dream of some of the OT AMers who had so much clip/compression/freq discrimination that initial key-up sounded like an explosion in a junk yard; if the shack door was open you heard toilets flush for half a mile.

I do think the AM part of the CB community has more than its share of idiots, nincompoops, bozos, dirtbags, and rebels without a clue. These are the yo-yos that think 28.085 or 28.535 is Channel 19 only more so and will ultimately cause some people (more likely people making a buck off of them) to get buried in tons of hot skunk shit. That is really my only problem with Ancient Mary; not quite true: the latest incarnation of 1940 Taylor Modulation - swing kits - is amusing as hell.

CD, perhaps you don't have a clear understanding of the rules here and perhaps should peruse through Part 97. Amateur equipment does not have to be accepted, and certainly it stands to reason that any piece of equipment which I built from scratch using my own design or someone else's would not be certified either. As an amateur I am permitted to built one amplifier in a year's time for my own use. I have done this and it was worked on until spectrally pure. A splatter box it is not. Where the problem comes with CB amplifiers is that potential buyers with substantially no technical knowledge do price comparison shopping based upon what the various manufacturers perport to be the technical data. Quality control is attrocious. Boxes and subassemblies are assembled by individuals who may or may not be familiar with the theory involved, and are designed to go together as cheaply as possible to keep the profit margins as high as possible while at the same time remaining competitive with the other names.

This is true and you know it, if you are willing to admit it to yourself. Here's another indication of the 'splatter box theory': how often has someone posted a note that read in part that they had very good swr prior to installing an amp, but afterwards, the swr was through the roof. The antenna is resonant on one frequency and progressively out of resonance the farther the signal migrates from the intended point. Hence, in some instances, part of the swr problem is the result of signals going out which are far from the entended frequency. Increased swr can sometimes result in additional emi problems because the signal is not radiated where and how intended.

I think it also has to do with your mode of transmission . If your keying down on AM with a 2 to 1 then expect trouble . If your on SSB , you should be safe but it`s still a little high for transistors.

A VSWR bridge is kind of like a Check Engine lite; it tells you that you have a problem but doesn't give you a clue what your problem is. A 2:1 VSWR can mean:

1. You are feeding a 25 ohm load. Bad news.
2. You are feeding a 100 ohm load. Won't load but no big deal.
3. Your antenna is capacitive -- too short. Potentially disastrous if oscillation results.
4. Your antenna is inductive -- too long. Not great but probably survivable.
5. Some combination thereof.

You have described a pretty common situation for an efficient quarter-wave. Efficient radiators are not generally broad; you want broad load a 50 ohm resistor.

Richard,

Actually I do remember SOME of the AM days albeit at the very end. My introduction to radio came at the age of 7-8 when I became intrigued with the amateur and ship communications on my Dad's old 1940s Philco. I used to listen to the heterodynes and pretend I was flying an airplane because of the way it sounded--like an airplane engine. My Mom would tolerate this only for so long! LOL! As SSB became more popular, I spent hours trying to tune in the garbled transmissions not understanding that without a BFO, I could never do it. Aggravated me, too! Both activities--SWLing and "flying" pretend airplanes led me into radio AND flying the real things. At 15, I joined the Civil Air Patrol and by the age of 18 I had my own HF radio (not a ham yet). I forgot the model, but the rig was an Army surplus transmitter and BC348 receiver--still on CAP. In 1967, I installed a Lettine 240, a Master Mobile HF antenna, and a converter on my new Chevy running all of 50 watts. Being a "newbie", it wasn't the greatest Hf mobile in the world, but I thought I was in "high cotton"! Boy, did it take the current to run that thing! The dynamotor would dim the lights WAAAAY down when first started. And if you forgot and left the filaments on, it'd run your battery down in 30 minutes flat! Been there and done that! But I liked to hear the loud "CLACK" when the mike was keyed and the relay kicked in to start the DM35 dynamotor. Some of the old time CAP ops used to "compete" to see whose relay would "CLACK" the loudest--even placing empty paint cans over it to make it louder. By 1970, the days of AM were gone, and we transitioned to newer SSB gear. Now the old ops competed with Swans, Collins, and Drake on SSB. Of course, the next step was to get a ham ticket, and as the equipment for CAP became more complex, it no longer made any sense to buy multi-band HF gear just for a few freqs. So I eventually got into ham radio (I had already been on CB with a Johnson Whiteface--also bought new in 1967). I still have the invoice for it. I guess my infrequent excursions on AM are just a reminder of the "old" days, and, perhaps, the part of it I DID miss.

> harming the amp.?

In most cases, yes.

A quick check you can make is to check the SWR at the
output of the amp with the amp both off and on. If
it's not in the red (above 3:1) with the amp on, the
system is useable.

In almost every case the SWR will increase when you turn
the amp on. The idea is to see how much it increases
and make sure you have enough headroom to keep it out
of the red. When the SWR with the amp on is in the red,
that's when the problems start. The problems include
fuzzy audio, overheating, squealing, and an inability
of the amp to unkey reliably.

Comrade,

Be prepared to call everyone comrade if Comrade Goresky gets elected.
You will get moresky with Goresky! More taxes, more regulation, more gun
control, etc.

If you like things like freedom, low gas prices, the first and second
amendment, etc., do not vote for Al Gorsksy!

Guys, before we argue more, I'd like to say a good point was made about the repeaters being down. Around here, they just aren't. I cannot remember the last real hurricane or tornado we ever had around here. The weather can be overcast and miserable quite a bit, but the moderating effects of the Great Lakes cannot be overstated. Once or twice a year it may .. just may .. drop below zero (farenheit). Once or twice a year it might .. just might .. hit ninety. Towers just don't come down. Ice storms, yes we had a gooder in 1991. We had one that just missed a couple of years ago. Ours took out a lot of power lines in the area. The one a few years back did extensive damage in the northeast. It isn't that the cell phone towers aren't reliable, it is simply the complexity of the gear. Someone with more knowlege in the subject should let us in on details, but I would suspect that the cell phone repeaters must not only maintain the repeaters, but also a fair amount of other equipment. I would suspect (but am not sure) that they might have to supply some minimal heating and cooling to keep temperatures from going to extremes. This would call for a considerable amount of power - power that would probably need be supplied from an emergency generator - that would need maintaining and likely is not there due to expense and also that the phone company is also likely to be down (in which case, you wouldn't connect to anything anyways). Our ice storm took a lot of phones out of service as well. Please understand that the high end amateur or cb tower is not likely anywhere the size of a commercial installation. If you get a LOT of ice buildup, it is the smaller tower that is more likely to survive (if it is well built) since it will be supporting much less weight in ice and also have less wind loading with the ice. Look at the various towers you and I can buy. Often, a lighter weight tower that is shorter will be able to support a larger antenna! Things get dicey with the big installations. Also, although many amateurs are inactive, there are likely many more active amateurs than commercial installations. Also, guys, there are a whale of a lot more CBers than amateurs. Believe me, when that big ice storm hit a few years back, the affected areas could have used more amateurs AND CBers. When are we going to all realise that we can compliment each others' service - and indeed, with all the frequency grabbing by big business, we actually NEED each other. Now if we could all get along ... (many of us do).

73's from Rochester, NY

The Lil Wil if fine for a Highway antenna. It will handle an average radio 25-30 watts peak okay. I have had one on my wife's van for a couple of years and it does a good job around the city 2-5 mile range.

I had a good tech install a 'dial a watt' mod on my RG99 (Sean F for those who know him here). I can set my deadkey all the way down to 1 if I want - maintaining clear audio at those low dead key settings is sort of tough.

A schematic eh? I'll look around and see if I see one. I think this one looks like the same basic switches as I see on the Galaxy 225's.

Thanks for the input.

Out of curiosity then, what do you charge for them at retail? I'm just guessing at what I think is a reasonable price. And you're talking about this one with 2 2290's not the 455's (the 225 you have on your website)?

Of course now I feel extra smart for having paid nearly $200 for it! Say - you don't own any ocean front property in Arizona you'd like to sell do you?

Since you get these things wholesale, maybe you'd know about the big blue resistor that's in there. It's pretty huge - is that telling me this is really a 'High Drive' sort of amp? It doesn't say anywhere on the faceplate that it is, but somebody I talked with thought the big blue resistor would be found in the HD units.

I know very little on the electronics front. This big blue resistor is about an inch long and a little over a 1/4" in diameter. The stripes here are gold (5% tolerance right?) then black, green, brown - so 15 Ohms? Or am I reading the stripes backwards?

Mighty big resistor - must be capable of soaking up some wattage.

Thanks.

: to aggravate your animosity towards hams. I am only trying to answer
: this as best I know how. I assure you anything I say is not meant to
: belittle, aggravate, or insult anyone.

: 1. Regardless of the propagation characteristics of 11 meters, it was
: originally intended as a short range, business/personal communica-
: tions medium. Think of it as sort of the "cell phone" of the late '50s.

Not quite true. It was originally an Amateur band. When Amateurs were not using it much (why should they when they had 10 meters), it was reassigned to CB - with the intent that it be used for short distance communication. That sounds like a political decision - not a decision by the FCC, as they must have known the propogation characteristics of the band.

... deleted ...

: 3. The airwaves are sort of like a garden hose. You can only cram so
: much traffic on a given frequency before the "hose" bursts. The idea
: was/is that stations using 4 watts, or less, even when skip was in, you
: could still conduct your business/family affairs over the CB radio with-
: out causing much difficulty for Joe Blow 800 miles away. Sure, he might
: hear you, and you might hear him, but you wouldn't prevent him from us-
: ing his CB, and vice versa. That was one of the reasons for low power.

Again, that sounds like a political decision.

: instances, part of the swr problem is the result of signals going out which
: are far from the entended frequency. Increased swr can sometimes result in
: additional emi problems because the signal is not radiated where and how
: intended.

This CAN be due to harmonics/splatter. But if the SWR meter is between the
transmitter and the amplifier, it is probably due to the amplifier not having
a 50 ohm resistive input.

: A VSWR bridge is kind of like a Check Engine lite; it tells you that you
: have a problem but doesn't give you a clue what your problem is. A 2:1 VSWR
: can mean:

: 1. You are feeding a 25 ohm load. Bad news.

Not necessarily. But the antenna will not radiate as well as if the impedance
were higher. More power is disipated as "ground loss".

: 2. You are feeding a 100 ohm load. Won't load but no big deal.

Not necessarily.

: 3. Your antenna is capacitive -- too short. Potentially disastrous if
: oscillation results.

Oscillation of what?

: 4. Your antenna is inductive -- too long. Not great but probably
: survivable.

No different than an antenna that is the same percentage too short.

: 5. Some combination thereof.

See above.

: You have described a pretty common situation for an efficient quarter-wave.
: Efficient radiators are not generally broad; you want broad load a 50 ohm
: resistor.

How broadbanded an antenna is depends on a number of factors, primarily the
Q of the antenna.

I would suggest that you go to the following URL listed below and read section 97.315 and section 97.317 carefully. These rules, which applies to amplifiers used by Hams, since most medium to low power HF amplifiers are manufactured for use in this service. I think after reading this you will understand why so many Hams have such a negative attitude towards CBer's in general. Since Hams can legally use amplifies on all of our bands the rule, in Parts 97.315 and 97.317, makes it impossible to "legally" manufacture, and "sell commercially" amplifiers that work on our 12m and 10m bands right out of the box. Yes we can modify them after the fact, but why should have to? This rule is a DIRECT result of the wide spread illegal use of amplifiers, on 11m, by CBer's who don't give a damn about how their actions affects others, either on 11m, or on any other band. In effect Hams are having to pay the price for the sins committed by CBer's.

It's the callous disregard for the rules that cause problems for legal 11m operators, and Hams too. Your comment above is EXACTLY why 11m has turned in to such a cesspool of crap in most areas. CB is not for shooting "skip" or running "power". The Amateur Radio Service is designed for that. It's really strange why we Hams are the ones who seem to care about keeping our bands cleaned up, while CBer's, such as yourself, seem to have no such interest in cleaning up your band, even after you get a " pointed reminder" by others.

1. It is not uncommon for sensitive devices to generate a parasitic into a capacitive load at the cross over point. While possible, it is less likely into an inductive load. Ask your TV man, if he is old enough, about Barkhausens with both beam tetrodes and again with transistors when the solid-state shift occurred.

2. I guess I see your last point but I have never seen a deer with body armor or a Q control on an antenna. I will assume you mean such things as conductor size and I agree; there is a practical limit to this and a fierce law of diminishing returns. No doubt there is room for improvement over say 3/16 stainless but I am not sure I want 96 inches or so of four-foot water main on my car's roof. Current division also works admirably on bandwidth which is why loops, quads, plus folded dipoles and unipoles are popular in a number of applications. They are a favorite of mine in fact.

Low dipoles over roofs are broad as a city bus. This is largely due, however, to heating the roofing nails in the magnetic field as the near field arranges itself to be radiated at the 377 ohm input impedance of the universe. Making a loading coil out of #28 wire will result in great broaditude at least until it blows up. Reducing the resistance increases Q, increases radiation efficiency (a simple Ohm's Law problem) but will reduce the 2:1 VSWR bandwidth. There ain't no such thing as a free lunch.

Yes there is wiggle room and a few good dirty tricks but in the long run of things, efficient antennas are not broad.

> Mine does have the ground plane kit. I figure it helps
> keep the coax shield from radiating.

Thanks Bill, I've had a chance to eyeball one of the folks that has
the "Antenna Question" and I've told him about this NG. With your
permission I will give him E-mail address. [I don't know if he'll even
do this but I just want to be ready].

The idea of grounded guying [guy wires] helps him also with the TVI
problem with the neighbors. His version of the GPK was to use the guy
wires not only for support but to help decouple the RF from the coax.

He has wound 8 turns of coax around his mast at the base of the
antenna. His coax run is close to 125 feet. So his reflected SWR is
being lost in all of this length of run.

As far as performance, he likes what he's got, but did ask a similar
question.

Greetings!

Just mount it on a good spot [on the roof if you can] and you're off
and running.

Distance? Expect 3-5 miles for good reports on a quiet day, a lot less
if there is a lot of noise [skip and other traffic].

If all you want is a simple antenna - this one is it and will do a
pretty good job if you give it [or any antenna] what it needs. A low
SWR, and the highest spot on the car - the roof.

If your radio isn't permamently mounted, please be sure to ground the
chassis of the radio to a bolt or trim screw using a short jumper wire
or a braided strap being preferred.

Be sure to borrow and use an SWR meter [if your radio has one great!]
and tune the antenna before you go. 1:1 SWR and you're all set. If
everything is put together right, radio grounded, antenna on the roof
- you won't have any problems with the antenna or tuning hassles.

The Lil Wil is a mag mount antenna and will require the radio to be
grounded to the vehicle.

On Fri, 27 Oct 2000 18:35:30 -0400, while the modem was pondering it's

Greetings!

How are you measuring that SWR?

At the radio - before the amp, or after the amp?

There can be a big difference.

Before the amp, you're seeing the input impedance of the amp.

After the amp, you might be pushing the amp a little too hard and need
to turn down the watts sent to it by the radio.

Check SWR at both locations, with the amp on and off, the SWR reading
from the amp to the antenna is what you need to tune the antenna for.

On Sat, 28 Oct 2000 04:31:22 GMT, while the modem was pondering it's

sir, like i have said many times on here, i bear no bad tidings towards hams, and why should i? hmmmmmm????, i only ask relevant questions and the prior one still stands and was not answered correctly. taking into consideration that we all know the legality of using amps on 11 meters, the question still stands. perhaps another question would be, why is necessary to have to jump through hoops to learn what one wants when one wants. you know in this world it is bad enough that we have to do what we do when we go to work, but when a hobby is involved such as this, can it not be said that a little personal freedom is in order. i mean most folks on here do not venture into the forbidden areas of the radio frequencies, so why is it that what we do and what we talk about is such a problem. i realize we have not punched every ticket like we should according to you fine folks but nevertheless, reading and sticking our hands in things to learn is not totally confined to the ham ranks,.....duck hunter is out.....

Poor John didn't get anywhere before so I will repost, as I have the same question.

Is the 75-830 really the smallest handheld in the world?

I am doing a mountaineering trip in an area monitored by CB and don't want to carry any more than I have to. (every gram counts)

Is there something cheaper but almost as small?

3447. Re: More setup opinions please [77-120 and 77-255 suk - IMHO]

Newsgroup: rec.radio.cb
Date: 2000-10-29 09:06:06 UTC
From: CodysPC@Iserve.Net
Message-ID: <39fbe01d.66486793@news.iserv.net>
Source record: 57181

Greetings!

Where do I begin?

Sigh...Having personal experience with the Midland 77-120 and the 77-255 [they don't have the 235 out yet, that I know of] I don't recommend either one. They don't last long on a bumpy ride in a Tracker. Traces from the Front panel on both separated from the main PCB within two weeks of use. Not recommeded for Mobile or Base use, the ESP-II in them blanks out too many stations along with the noise.

In a few words, if you are in a remote location, pack it up and go home - these radios don't cut the mustard in performance.

They are simple radios - no frills, plain jane types. The 255 has the Scan feature and 3 memory channels which is nice, and the 77-120 has the "Frequency/Channel" display. Both have Weather, but can't be converted for "Extras". The 77-120 uses 10402 PLL and the 77-255 uses the 10401 PLL - these are new to the market and I've tried some mods to these radios - with little, if any, success.

Both have ESP-2 - which can be a big help or a horrible means to butcher the receive of a radio.

My results? I'll take a simple ANL off of a Uniden anyday over this piece of junk board...

Found both radios metering to "swing backwards" on an otherwise steady signal being received. Meter action like that is pointless.

As far as other receive quirks, the ESP, when it's engaged, doesn't just blank out the noise - more like muffles it. Makes it hard to hear a weak station just above the noise level - the ESP is trying to blank out the noise present in the signal. And when it senses the signal is strong enough to hear, it blares, it *BLASTS* out the audio from the speaker.

Once your ears stop ringing from the audio - and the speaker cone wasn't driven into the speakers grille like an umbrella, they sound good, just like any other radio.

The performance of the ESP - is comparable to the SoundTracker - both are pointless add-ons that do very little. A noise blanker or ANL switch is a hell of a lot better than the sounds you hear while using the ESP on these Midlands.

The TX side is pretty good, lives up to the Midland respect that I've got from previous experiences with Midland. However, what good is a

transmitter if you can't hear anything but crap? I'm not about ready to put *two* radios into a vehcile - and using the Midland for a receiver, you'd have to do just that - use one for receive [preferably a completely different radio] and the Midland for transmit.

For a while, due to the 77-115 and 77-113 having some minor problems like poor soldering of the "vertical boards" and mic squeals from poor layouts - the instant odds and memory feature made these radios popular. Midland did have a hit on their hands. I thought that Midland had a grasp of the requirements needed in a rough and bouncy environment like a typical vehicle on average roads. They held up well, once you got enough solder on the mounting pads and fixed the squeal problem.

That, and some weak solder joints, these two radios do not get a "recommended" in my book.

If you get one, you're on your own.

But, why fix a radio? Get yourself a PC78 and be done with it. SWR built-in is ok in my book. Spend the extra money on the Uniden, you'll be a lot happier. I bought both the 77-120 and 77-255 hoping I'd get some nice radios.

They aren't!

It's not worth the price and I'd have to tape a $2-bill just to get someone to take it - they are junk - and not worth it!

On Sat, 28 Oct 2000 11:09:19 -0400, while the modem was pondering it's navel, "Aaron Mooney" <aamooney@vt.edu> dissertated the following:

Change your settings to allow you to include the message you are replying to in your reply. Then, edit the included message. I don't know if you can do this with the webTV package.

> I didn't say that webtv was as fast as a computer . I said It's
> almost as fast as the AVERAGE computer . I never said anything about
> comparing it to a fast connection with a great computer .

I guess maybe we both read more into each other's posts then was actually there? ;-)

> Like I said , I do have an average computer and I prefer to use my
> webtv when I'am just surfing around .

See, if you had the ability to attribute, I would be able to see this without looking around for the original post. :-(

> As to your comment about webtvers trolling and then leaving , Its
> just not right to condem somebody because of the server they choose .

All I said was "they" have a reputation. I don't remember anything about trolling though in several other NG's that I frequent it is common.

> Comments like what you made unjustly discredit everybody that use webtv
> and create an attitude for others to disregard any posts that are made
> by someone using webtv .

I don't see how. I guess it's difficult to speak in generalities without running the risk of being accused of stereotyping.

> There's a few great techs in this group so unless somebody asks a
> question that I can answer just as well as the better techs , then I
> don't reply to them , but when I do rely to somebody I don't expect them
> to ignore my post just because I sent it from webtv .

I agree. Obviously I *do* read webTV'ers posts or I would not have read yours. I don't, however, remember your reply being one of, well, let's say, "substance".

> I come to this group to give and receive info . I have NEVER trolled
> anywhere on the net and I never will .

I agree with you and I never have either. I have enough to do without inviting disaster, and quite possibly, a heart attack from stressing out.

Maybe now you understand why I
> acted so thin skinned when when I replied earlier . What you said was
> the equivalent of a racial slur .

Wo-there, Buddy. I'm with you up until now but here I've gotta draw the line. I can agree that arguments such as ours could lead to accusations about discrimination or some such but you lose me at the "Racial Slur" comment. I ain't gonna go there.
Anyway, I only meant to point out that webTV was still rather primitive and that some of it's users had gotten a reputation for, er, ham-fisted behavior. I suppose any new service, in it's relative infancy, would garner it's fair share of that type of comparison. Note how Hamsters look upon "all" of those that use and operate CB's. I'm sorry if I offended individuals such as yourself when I was actually speaking with a much broader brush. That being said, it's still my opinion that the service does have the reputation I spoke of. Not individually, but all being in the same group, collectively.
Peace.

That shipping must be for a gold dust lined carton! $3.20 and a VHS type carton from USPS (FREE!) plus $.35 for Delivery Confirmation, shipped anywhere in the US would cost $3.55 for Priority. ;-)

Why would you like that piece of junk? You must never of heard of a Uniden Pro 510xl ! It is gobs better & a real metal case & channel dial!!! Dave!!!!!

webmaster@blitz.org wrote in message <39FB9D20.C6FF5082@blitz.org>...
I'd go up to 25 bucks. If AM were my one only appeal to radio.

Personally I always liked the Cobra 19+ for a strictly AM CB radio.

Maybe continue this horrible era of prosperity? I look at this election as voting for one to keep another out. Nothing more, nothing less. The 3rd party candidates do not have a snowball's chance in hell and can, and probably will, determine the winner of the election.

This "horrible prosperity" is going to come to a crashing halt due to the Clinton/Gore administration. The economy doesn't change instantly, so the prosperity that we have been experiencing is most likely due to the Reagan administration tax cuts.

here it is. the real reason he post this crap. he is mad we are dx'ing to as many and at times better places than he is and we didnt even have to get a liscence, oh i forgot he's a tech and likely isnt dxing anywhere. regardless of what cb was designed for 30 plus years ago things change and this band has changed. sometimes things grow bigger than there creator which was the case for cb. it isnt our fault the fcc was thinking small way back then. hey leland, how would you suggest we stop all the dx? maybe you experimenting hams can come up with a device that allows the 27mc wave to go right thru the ionosphere. a perfectly legal 4 watt radio can talk anywhere in the world. should we just stop using 11 meters during the solar peaks since its illegal to tx ovr 150 miles and theres really no way to stop it?

Just happened to be scanning through 11-meters and caught "The Original Red Panties Man" on 27.385 LSB yesterday afternoon. Sounded like the real deal: was talking about 14.313, 3901, Vietnam Dan, Dumb A** Donnie, Pork Butt, etc. Said his ham rig was in the shop, so he has temporarily taken to agitating on the CB instead. Funny stuff!

Anyone else hear this?

Shit No..... The flesh, skin , blood
& such would require Superfund status to clean.
Anyway, that would be a waste of money, because
I would have to have my wheels balanced.
No, I'll use the truck in low-lock, a much better
job, and all I have to do when it's done is go
to the car wash.

3485. Re: Antenna Coax connection

Newsgroup: rec.radio.cb
Date: 2000-10-29 17:51:11 UTC
From: tnom@mucks.net
Message-ID: <6noovsg1f4l1cfnn8eblnou4ijuo7l3v1f@4ax.com>
Source record: 57375

snip

I will repost an alternate method of matching the 5/8 wave:

Take two short pieces of coax, Call them B & D.
50 ohm is fine.

The reason I used B & D is because the antenna
is A and the feedline coax would be C.

Imagine the hookup of A,B,C,D, left to right.
See picture below.

B in feet =122/MHZ
D in feet =30/MHZ

A in feet = 585/MHZ

C = any length

###############

Form an intersection of B,C &D. Connect the center conductors
of all three. Then connect the shields of all three at the same
intersection. It should now look like the letter T with the feedline
being vertical.

Take the right side of D and short the center and outer conductor
together.

Take the left center conductor of B and connect it to the antenna.
Then connect the left shield of B to the ground radials on the
antenna.

Cross fingers.

TW,

Do you REALLY remember the Carter years? DO you actually remember 20% mortgages and runaway inflation that occurred during that time? During Reagan, the economy boomed and interest rates fell to 1960s levels. Do you remember the "givaway" of the Panama Canal that the US built? Do you remember the fiasco of the Iran hostages under Carter and the failed attempt at rescue because of the condition of our equipment and military readiness? Do you remember the upgrading of our military readiness under Reagan? Do you know WHY the Soviet Union collapsed? Do you REALLY think Desert Storm would have been successful under Carter? It was the policies of the liberals that gave us these fiascos. Sorry, I cannot vote for Gore.

Respectfully,

Jerry

James (and Tim)

When Hurricane Hugo hit the NC Piedmont in '89, it took out power lines for weeks AND repeaters, as well. The only comms. I had were via my mobile on HF. For us, 200+ miles from the coast, such an event was devastating, unexpected, and traumatic. NO one expected a 90+ mph hurricane to roar in at Charleston, SC and roll like a runaway train right up thru the mid parts of NC. Like so many others, caught by surprise, my family and I huddled in the basement listening to howling of winds like never heard here before. Trees were cracking and snapping as they fell. Houses were destroyed or sustained major damage--like one home where a huge oak fell thru the roof stopping at the bottom of the picture window in the living room! In my neighborhood, my house was the only one that didn't have a tree on it or thru it! The next morning, I went outside to a scene of massive destruction. Power lines and poles were twisted and snapped. Huge piles of debris were everywhere as if a bomb had been dropped. We were trapped in the neighborhood for 3 days because there were so many trees down in the streets, we couldn't get out. Working for those 3 days, we managed to literally cut "tunnels" thru and under the trees to drive out. My 60 ft tower stood thru it all --amazingly, but all antennas were either damaged or down. My dipoles were twisted like Maypole ribbons. But guess what? We had PHONE service! It never quit. I don't know how, but we had a phone. Power was off for 3 weeks. What an experience! Now if we could stop having ice storms.....

A man suspected his wife was seeing another man, so he hired the famous Chinese detective, Chen Lee, to watch and report any activities while he was gone. A few days later, he received this report:

Most Honorable Sir:

You leave house.
I watch house.
He come to house. I watch.
He and she leave house. I follow.
He and she go in hotel. I climb tree.
I look in window.
He kiss she. She kiss he.
He strip she. She strip he.
He play with she. She play with he.
I play with me. I fall out of tree.
I not see.

No Fee,

Chen Lee

Two little boys are visiting their cousin in the country when they decide to go for a walk down the back roads. After about three miles they find a used rubber lying by the road.

"Hey," one of the dumbass city boys says, "look, some cow lost one of its titties!"

"Let's go give it to the farmer!" the other one says.

So, they work they way up to the farm house. They knock on the door and out comes the farmer.

"Hey, Mister, we found a cow titty. Ya want it back?"

The farmer didn't feel like conducting a mini sex ed seminar, said, "Sure, boys, uhhh, here's a dollar for your trouble."

The boys hand over the rubber and head on back down the road.

After a little while one says to the other, "You know, dumbass, we could have got more than a buck if you hadn't drank the milk out of it!"

Well, I THOUGHT I answered your questions, but it must not what you WANT to hear.

You asked why hams could build an amp in the comfort of their homes and use it without type-acceptance.

It is because of the experimentation aspects of ham radio that has existed since the beginning. For an example of this, I cited the example of the Screwdriver antenna developed by Don Johnson of Esparto, CA.

It is because of the LEARNING that occurs and the commitment shown by people who are WILLING to accept standards, and take tests of those concepts demonstrating their understanding of the vagaries of radio, electronic theory that makes radios work, and the affects of the universe on their operations.

Jumping thru hoops. All I can say is that, due to the very nature of radio and propagation, there HAS to be some kinds of limitations on what a person can do. We here in the US have unparalleled freedoms compared to many other nations, and that freedom extends to the radio waves. However, the principle is to practice that freedom without impinging on or preventing others from enjoying the same activities you do. To do that, there has to be certain restrictions AND a way to demonstrate that you know what you are doing in such a way as to not inhibit others' freedoms as well. Hence, regulations, albeit not perfect, designed to do just that.

CB radio was never designed to be used to "shoot" skip. I think I DID cover that in my earlier post. Often folks post that, "Well, can I <<help>> it because I hear skip" implying just because it is there, one MUST talk to the skip stations. CD, if you'll go back and re-read what I wrote, you might see what I was trying to say. I often have to read things again to get ALL the text's meaning. No flames intended or implied here.

The thing about the amps is that they actually make things worse. Because of the LACK of training on the part of MOST of the general public--certainly not all--you have people everywhere trying to talk at the same time and some trying to talk OVER everybody else often using WAY more power than is needed. Example: Trucks talking to each other 50 yards away using 600 watt+ amps. Four watts would be quite adequate. While they are in the process, they are paralyzing others' receivers rendering them useless and preventing useful information from being

heard. Where amps ARE legal, as in the amateur service, it is incumbent on the user to make sure his operation is not interferring with other users. Thats where the <<demonstrated>> knowledge comes in. That's the reason for the tests, i.e., "hoops", as you call them. Sadly, even in the ham ranks, in spite of the exams passed, there are those who play the "King-On-The-Hill" game. Like I said, CB and ham radio are made up of people with different levels of discipline, attitudes towards their fellow ops, and training. There ARE people in CB who can out-"theory" many hams any day.

Finally, I guess it boils down to one thing: CB was designed for a certain purpose (which has been thwarted), and Ham radio wasn't designed for anything--it was there from the beginning and was the source of ALL of the types of radio we enjoy today--including CB. I didn't make it that way, it just, well....., is. Again, none of what I have said is meant to upset anybody. I sense that some people would like to see ALL restrictions, laws, illegality removed so they could do anything, anytime they like. If that were the case, no one would be able to use the radio--and includes me, the police, fire, aviation, and you, cd. People would DIE because of it, believe it or not. And that's the best I can do with this thread.

Best 73

Channel 6 is next? Well, maybe. Don't overestimate the power of the FCC to put a stop to ALL illegal activities on 11 meters.
Hollingsworth and his band of merry men will probably make a few well-publicized busts, and then hope that the influence of the busts will have a trickle down effect on the rest of the illegal 11 meter operators who haven't yet been caught. Uncle Charlie has been using this practice for many years with pirate broadcasters, and it works . . . for awhile. A few well-publicized pirate radio busts are made, and for awhile one hears little or no activity on 6955 USB. Then, once the dust has settled, the pirate broadcasters come out of hiding and are on the air again.

The high-power radio operators have been on the air for as long as I can remember, and my memory stretches back to the late 1970's when CB was at its peak. Amps and export radios were around 20 years ago, they just weren't as easy to purchase as they have been in recent years. My guess is that if the FCC does manage to stop the sale of amps and export radios over the net, the market for illegal equipment will just go underground again,
as it was in the 1970's and early 1980's.
As the saying goes, where there's a will, there's a way. If radio operators want to use an amp or an export radio, they will find a way to get their hands on one, FCC be damned. Think about it: manufacturing and importing cell capable scanners has been illegal in the US since mid-1994, but how hard is it to buy a cell capable scanner if one knows where to look?

Frankly, I think Riley Hollingsworth and his staff have better things to do than chase CB'ers with amps and export radios down the interstates of America, which is where most of the violations occur. And as I said earlier, don't overestimate the power of the FCC. Despite Hollingsworth's best efforts, some of the amateur frequencies like 3950, 14313, and 7258 are still a cesspool at times.

Hi Leland,

Thanks for bringing me up to speed. I don't think it is fair to blame CBers for this law any more than it is to blame ones self for letting the law get passed in the first place. I don't know what tricks the manufacturers are using to ensure the amplifiers aren't used on CB, but anyone with a smattering of ignorance in HF amplifiers ought to affect the modifications necessary to get the amplifier working on 11m. We don't have this law up here in the true north strong & free. The reality is, where there is a demand there is sure to be a supply.

MC

Jerry,

The next time I ever find myself grousing about our weather here, I'm gonna slap myself a couple of times and thank the Good Lord that I have never gone through a mess like that! The worst we've had here was the ice storm in '91 - many people without power, cable, or telephone. Why, I don't know, but I had everything - even with powerlines down or damaged at both ends of the street! Thanks for reminding me how good I've had it!

...and I respectfully cannot vote for Bush. Yes, I remember the seventies, quite well. 4 years of Carter was kid's stuff when you compare it to the cocaine dealings and illegal arms, the whole Iran thing that resulted when Reagan took over. Of course the economy improved with Reagan, it was open season and declaring "war" was , and always is fashionable to the extreme right, when in doubt, go to war..small country, domestic crime, drugs, PEOPLE...the list goes on. I am no Clinton fan, but find it quite ironic that the right screamed the loudest when he allegedly lied under oath (about his sex life) and wanted his head on a platter. When one of their own do it, they make him a hero...in the name of national security, of course. If Clinton should have been punished for lying about his sex life, then Ollie should still be doing time for lying about pertinent facts that DID affect the country, unlike Clinton's personal sexual habits, and mere "figureheadship" posturing as morality doesn't count. How can I forget the hostage crisis? One of the countries we are still playing around with after HOW many fiascos and under whose watch?
The Soviet Bloc fell because of evolution. It simply was time....bound to happen if even YOU were president. To attribute it to any sole entity is, well, at best, foolhardy.
Er, by the way, going by what is apparently taking place today, I would not exactly call Desert Storm, "successful".
I also remember 329 bucks to a private contractor with ties to the Reagan administration for a wrench. This epidemic was widespread concerning the "military readiness".
Concerning the Panama Canal..I respectfully concur.

The government does what government does best, it took the easy route. It costs less money to restrict the design features of HF amplifiers than it was to do any true enforcement of the Part 95 rules. I think the FCC has gotten to the point where they understand the cheap route didn't work. The E-bay thing is a small warning shot across the bow of the 11m operators operating illegal equipment that this is going to change. How much remains to be seen.

> I don't know what tricks the
> manufacturers are using to ensure the amplifiers aren't used on CB, but
> anyone with a smattering of ignorance in HF amplifiers ought to affect
> the modifications necessary to get the amplifier working on 11m.

With some that may be true, provided you can get the parts. Many products now days use proprietary parts that are custom designed for the application. If you can't get the exact part(s) you may be able to home-brew a replacement. Then on the flip side are the really nice solid state HF amplifiers for a few kilo bucks. To open those up requires contacting the manufacture, providing proof of license, to get the instructions on how to reprogram the amplifier to work on 12m and 10m.

> We
> don't have this law up here in the true north strong & free. The reality

Sad but true, just like the illegal drug trade that ruins so many people's lives, both the user and seller's.

Dave!!!!

Jerry Oxendine wrote in message <39FC645E.42ED@bellsouth.net>...
TW,

Do you REALLY remember the Carter years? DO you actually remember 20% mortgages and runaway inflation that occurred during that time? During Reagan, the economy boomed and interest rates fell to 1960s levels. Do you remember the "givaway" of the Panama Canal that the US built? Do you remember the fiasco of the Iran hostages under Carter and the failed attempt at rescue because of the condition of our equipment and military readiness? Do you remember the upgrading of our military readiness under Reagan? Do you know WHY the Soviet Union collapsed? Do you REALLY think Desert Storm would have been successful under Carter? It was the policies of the liberals that gave us these fiascos. Sorry, I cannot vote for Gore.

Respectfully,

Jerry

>hey leland, how would you suggest we stop all the dx?

Simple, pull the plug on 11m, no more importing, or manufacturing of 11m two-way radio equipment, and force all former 11m operations in to the FRS, MURS, and GMRS services. Then to further discourage those who refuse to leave the FCC can then license all new industrial equipment, that emits large amounts of RF noise energy, for operation on 11m.

You really need to think about why the FCC rolled out two new license free radio services, on VHF and UHF, in the last few years. I don't think it was solely economic, with the idea to stuff more money in to the government's pocket. The handwriting is on the wall.

The 11m band is no more protected from having its current users moved any more than the Ham Radio service does. We have had several of our bands moved at one time or another. Even now at the up coming WARC in 2003, the worldwide 40m Ham band may get moved. If you think that can't happen to 11m, you're living in a dream. If enough countries get fed up enough with the crap, or corporations with big bucks looking for bandwidth, its going to happen.

it will never happen because nobody cares about the situation except tech hams that dont even have hf privileges and thats not saying much in the days of 5wpm extras. your talking about widespread jamming which would cost huge amounts of time and money all to bust up a hobby that is not hurting anything? your ham bands and you hams have been moved because they have your ticket to hold over your head if you dont move. were already pirating so we dont have to worry about that. your seriously dilusional if you think anything other than token bust are going to happen. the fcc budget is too low. plain and simple. the only people being busted on 11 meters lately have callsigns after there name.

James,

Luckily, we haven't had another like Hugo, but every hurricane that threatens the east coast makes us understandably nervous! For the most part, our weather is fairly mild. We do get our fair(?) share of winter WX, but not like it used to be (Global Warming?). The ice storms are a source of worry for obvious reasons. Most snows only last for a couple days, but west of here, in the mountains, it can get really dicey. Temps usually run from the teens to the 30s in winter, and once in a while, we get some minus temps. Not often, thankfully. North Carolina has a variety of WX from balmy to bone-chilling wind chills. People who don't live here, somehow, seem to think we are in the tropics but it CAN get really cold. Just not as often, and for not as long as in the Great Lakes area. I remember a number of years back when I lived near the coast that the Albemarle Sound near the Outer Banks froze solid and the Army Corps of Engineers were busy getting/keeping the bridge supports from being pushed from under. The bridge is 2 miles long, so you can see what a problem they had. I mean, it looked really funny because the waves actually froze in place! It wasn't smoothe like a lake, but with peaks a couple feet high in places. I've seen snowfalls of 30+ inches, but that was a long time ago. Still, I like it here. When it gets cold, I just fire up the wood stove, make hot choc., and sit by the fire talking on the radio!

Got a radio used for about five days. Galaxy DX77 HML. Dual finals, three power stages,several bands of channels, with SSB and the beep. Complete with all, including all packing.
Also 2x4 Bulldog amp. very similar to x-force, good to very good condition mechanically.
Email me if interested.
thanks

Tim,

May I ask a question? Let's say that what Leland said DID happen. Let's say for a moment that there DID come a day when FCC reallocated 27 MHZ for something else (unlikely, but not impossible), DID get their funding restored, and gave a "sunset date" for everybody to move. What do you really think WOULD happen? What would happen if 27 MHZ got flooded with telemetry and other stuff that interferred so badly as to "ruin" CB as we presently know it.

Tim, I'm not asking this to be a smart aleck. I just want your honest opinion as to what would happen if this took place.

WELL I COULD JUST GIVE YOU THE AD. AT X-FART!!
BUT I THINK I'LL TELL YOU JUST REPLACE THE TIP42C & THE TIP 36C...
THAT V-REG. WILL ONLEY RUN 1 LEECE.
& THAT IS THE 250AMP.
SO IF YOU HAVE ONE 250 AMP. IT WILL RUN IT GOOD.
BUT YOU CAN RUN 2-165 AMP. LEECE.
ON THAT V-REG. BUT IT WILL RUN HOT!

SO IT WILL HELP IF YOU HAD TOLD US IF YOU HAD 1-250 AMP. OR 1-200 AMP OR
1 OR 2 -165 AMP. ALT'S
BECAUSE THE V-REG'S THAT ARE MADE WITH THE TIP 42C & THE TIP 36C JUST
DON'T GO OUT BECAUSE YOU HAD TURNED IT ON TO CHARGE UP THAT OLD BATT.
BANK!!

YES I AM MR.123 ILL.

Illegal CB Transceiver List
The FCC's Office of Engineer and Technology (OET) has evaluated the devices listed below and has concluded that these devices are not only amateur transceivers but can easily be altered for use as Citizens Band (CB) transceivers as well. As such, OET has further concluded that these devices cannot legally be imported or marketed within the United States for the reasons discussed below. Further, the FCC General Counsel has issued a decision in a specific case involving one manufacturer and has concluded that dual use CB and amateur radios of the kind at issue may not be approved under the Commission's rules and are in violation of several rules including the RF power level limits of 47 CFR 95.639. (letter from Christopher J. Wright, FCC-OGC to John F. Atwood, US Customs Service, dated May 17, 1999).

Transceivers used in the Amateur Radio Service below 30 MHz do not require FCC authorization prior to being imported into or marketed within the United States, but transceivers for other services, including the CB Radio Service (CB), do require Commission approval. The transceivers listed herein and other similar models operate in the amateur "10-meter band" and are often referred to as "10-meter" radios or "export" radios. The amateur 10-meter band uses frequencies that are very close to the channels set aside for use in the CB service. Some of the transceivers that manufacturers call "10-meter" radios either operate on CB frequencies as manufactured and imported or are designed such that internal circuits can readily be activated by a user, a service technician or a dealer to operate on CB frequencies. According to Section 95.603(c) of the Commission's rules, a CB transmitter is a transmitter that operates or is intended to operate at a station authorized for the CB service. 47C.F.R. § 95.603(c). The Commission's equipment authorization experts in the FCC Laboratory have determined that the transceivers listed herein and other similar models at issue here are intended for use on the CB frequencies as well as those in the amateur service because they have built-in capability to operate on CB frequencies. This capability can be readily activated by moving or removing a jumper plug, cutting or splicing a wire, plugging in a connector, or other simple means. Thus, all the transceivers listed herein and similar models fall within the definition of a CB transmitter. See 47C.F.R. § 95.603(c). A CB transmitter must be certificated by the FCC prior to marketing or importation. 47 C.F.R. §§ 95.603(c); 2.803.

Moreover, the dual use CB and amateur radios of the kind at issue here may not be certified under the Commission's rules. Section 95.655(a) states: ". . .([CB] Transmitters with frequency capability for the Amateur Radio Services . . . will not be certificated.)" See also Amendment of Part 95, Subpart E, Technical Regulations in the Personal Radio Services Rules, FCC 88-256, 1888 WL 488084 (August 17, 1988). This clarification was added to

explicitly foreclose the possibility of certification of dual use CB and amateur radios, see id, and thereby deter use by CB operators of frequencies allocated for amateur radio use.

In addition, the Commission's equipment authorization experts have determined that the devices violate or appear to violate a number of the rules governing CB devices. For example, they may use emission types not permitted, or emit RF power at a level in excess of the levels permitted in the CB radio service. See 47 C.F.R. § 95.639.

In view of the foregoing, the following "10-meter" transceivers are not acceptable for importation or marketing into/within the United States. Importation and marketing of these units is illegal pursuant to Section 302(b) of the Communications Act and Section 2.803 of the rules. Willful violations of the Rules and the Act may subject the violator to a monetary forfeiture of not more than $11,000 for each violation or each day of a continuing violation. The Commission continues to review this type of equipment, and additional makes and models may be added to this list in the future.

LIST OF TRANSCEIVERS
ILLEGAL TO IMPORT OR MARKET
GALAXY - models: DX33HML, DX 44V, DX55V, DX66V, DX 73V, DX 77HML, DX 88HL, DX99V and Saturn Turbo

CONNEX - models: 3300, 3300HP-ZX, 3300 PLUS and CX-3800

MIRAGE - models: 44, Galaxy 88, 9900 and 2950EX

NORTH STAR - models: NS-3000 and NS-9000

PRESIDENT - models: Grant, J.F.K., Jackson and Lincoln

PRO STAR - model: 240

RANGER - models: AR-3500 and RCI-2950

TEK - model: HR-3950

UNIDEN - models: HR-2510 and HR-2600

SUPER STAR - model: 121

HAY PEE-WEE
IS THE TAST STILL IN YOUR MOUTH??
'HO' YOU ARE STILL SUCKING ON IT!!

JUST TO SAY I MAY BE OUT? BUT I KNOW WHAT IS HAPPING IN THE DAVE MADE WORLD!!!

SO DON'T EVEN THINK FOUR A MIN.
THAT I'LL LAY LOW AND "NOT SAY ANYTHING" TAKE THAT TO THE BANK AND CASH IT IN MAN..........

AND IF YOU ALL ARE TRYING TO GET A DC AMP FROM THE DANE CAMP IN "NJ"
IT'S NOT GOING TO HAPP'IN!!
YOU ALL WILL HAVE TO JUST HAVE TO GET IT FROM "MR.GUNN" IN NC.

IT LQQK'S LIKE A 1 PILL TO A 32 PILL...

WELL GOOD LUCK TO ALL OF THE DAVE MADE FAN'S.....

IT COULD HAD BEEN A
'VARMENT WORLD'

YES I AM "MR.123ILL."

Really? Like "thinking" the following...
He started the internet, inspired a book, dicovered a town, picked tobacco(from the panthouse in DC), vowed to stop tobacco, accepts contributions from tobacco, accepts contributions from communist china, his father (he claims) fought for civil rights but voted against it, says he'll give "targeted" tax cuts which means nearly no one will get any, all guns will be licensed (with confiscation to follow), will make us completely dependant on foreign oil, the list goes on....
He's got the capacity to think alright...
in abstract.

Actually, from what I remember, in addition to being old news, this was un-enforceable..... You will notice the date was some 17 months ago, and no shortages have occurred... Then, this could be a delayed action enforcement mandate, sealed in a time capsule for enforcement May 17, 2099..... At any rate, what ever gets your ziz wheel spinnin', at least this keeps some folks occupied and keeps them from harming themselves, or others.....

Jerry (and Tim),

Excuse me for thread hopping..... CB is already faced with Hispanic traffic inband and out, South American telephone exchange traffic and some VOR-type signals that come and go. The heterodyne from hundreds of conversations going on simultaneously across the world on any given 3 kHz spread surrounding a channelized center frequency produces a complex tone that is as annoying as most telemetry would be; although maybe not quite as wide. For the same reason that normal receivers make bad choices for decoding wide bandwidth telemetry or high speed data, the 27 MHz gear in use may not see the full potential for disruption that telemetry or data transmissions had to offer. Noise levels are high from before sunup to way after sundown. Granted, wideband telemetry would make conversations on AM harder to copy, but DSP prices are lower than when first introduced, and most CB stations have more invested than many hams do in their gear. In many cases, the CB operator may not fully understand the mechanics of the "better mousetrap: accessories offered, but he knows how to make it work.

If 27 MHz was treated with some enforcement activity that had teeth and efficiency behind it, think of what the old Marine radio telephone SSB frequencies (now basically abandoned) would become, and how much more widespread freeband operation would be within the heart of HF band spectrum.

I am playing Devil's Advocate here, and not meaning to present an argument. Your question was meant to invoke thought, and these are some of the first points that came to my mind. I know there are at least a dozen counters to every point, but they won't erase these thoughts from the realm of possibility.

No, I didn't. I tried throughout the past years licensed and the 30
some-odd years of associations with other hams prior to my becoming licensed
to keep an even keel, while staying abreast of issues. I found that by
understanding both sides of an issue, I was much less likely to make
embarrassing statements publicly showing my lack of knowledge and
experience. A little of that goes a long way. I do an equal percentage of
elmering from the CB and Ham community sharing what I have learned from
experience over the years in the hopes of furthering the interest in
technology to folks from both groups. 8 Years is like a view of an Iceberg.
There is alot more of it obscurred by the water it is floating in, but that
doesn't mean it isn't there. Perception comes with experience.

The "posterity" is due to the flooding of the market with money that is not backed by treasury bond sales; resulting in inflation on a 1:1 ratio. This money is the "New Bills" which were supposed to be exchanged on a one for one basis with existing older bills in circulation. There was an 18 month exchange period for each newly introduced denomination, with penalties to be levied for bills showing up after the 18 months. This brought 2/3s of our Cash back into the country from the Drug trade, and flooded the market. The Y2K scare presented the chance to dump all of the previously exchanged bills back on the economy under the premise of preventing bank runs on 1/1/2000 if there were data glitches affecting the banking industry. On top of that, there was further introduction of freshly printed bills dumped to further provide insurance on a failing banking system. To top that off, the "margin Call" percentage was lowered from 10 % to around 3%. The only way the inflation has been masked form the public is due to the tremendous imbalance of trade with other nations, which allows us to "export" our inflation to them in the form of payment for imported goods.

If this is prosperity, I would hate to see the effects of hard times. I am no real lover of the Bush family, but will hold my nose and pull the lever to try to prevent the economy from being further "Gored" in the future by the kind of smoke and mirrors that have been falsely propping it up for the past 8 years.

Mathematics is a finite concept. Do the math. Even a cat will finally give up on trying to cover up the smell of limburger cheese dropped on the ground. The "prosperity" fallacy is getting harder and harder to mask, and the sandbox is getting full of previous attempts.

In a debt-based monetary system, the only way to show economic growth is to further increase the debt. Money that is not backed by any value has to be loaned into existence. Gore promises to reduce and even zero out the debt during his tenure in office. The only way to zero out the debt is to have a money system based entirely on coinage. All bills would have to be removed from circulation to remove their face value liability, them we have the issue of past interest owed on bond sales allowing those bills to be loaned into the market.

Check the Congressional Record from the special session called March 6th 1933. It resulted in the passage of HR1491 on March 9th 1933. If you read and understand the ramifications of this bill, you will realize that what Gore claims he will do is not only impossible, it will crash our fragile monetary system and render us a debtor nation to the rest of the world and leave us with a third world GDP and monetary system. Gore is very much aware of this.

I am not sure that there is anything Bush (or anyone else) can do to revive
the economy, but at least he isn't claiming he will take a direct path at
destroying it like Gore has....

Also try www.stevevaus.com . His music and that of Carl Klang should be heard by all. I am partial to the Carl Klang Album: It's Dangerous to be Right when the Government is Wrong.

Both provide a good musical look at out nation ; past and present.

Oh hell, never again..... I hope !
I have enough trouble locally.

Liberals are no good, we have a couple that "got in" here in Long Island.
Now its hell, constantly taking them to court to tie em up with there stupid
zoning changes.
They want to build low income housing projects all over the place as well
bus in something called ESL students. (ESL=English Second Language.....
WHAT This is AMERICA !
They are also hassling state government into re-assessing the taxes to sock
the people on the North Shore in the wallet.
Gore and a Hassidim vice president with interest in the mid-east.
The military has enough problems being run down by slick Willie.
I remember Carter having to let the country and the military look like
sitting duck fools.

Sorry, I will not vote for Gore as well as any other liberal's.

This is last year's dead news. Guess the Galaxy Melakas and plain 'ol Saturns are ok, not to mention a host of others that failed to make the list.

hi jerry,
the thought seems so unlikely i'll be honest and say ive never given it much thought. the fcc would have to get aproval for reclassifying the band from the itu. in the UK there channels are not ending on 5's like ours do and there channel 1 starts above our 40 while still being below 28 megs. and the same goes for brazil i believe. then you have new zealanders and aussies down below channel one for there legal 40 channels and quite a few others as well along witht he aussie coast gaurd working on the high 27's. the area we call freeband here is actually legal channels in other parts of the world and the anti cb'er attitude is really only lying with the american hams. thats why i get a kick out of the rf police here spouting off usa rules everyday when this is a international board. now if the fcc was to start enforcing the laws it would mean a huge budget increase on a percentage never before seen for a US government agency. they likely could stop a lot of the Kw channel 6 stations because there a problem to there neighborhoods and i'm sure get a lot of complaints so they would be easy pickings. but the sidebanders like myself running gear just as clean or cleaner than any ham radio would likely not have any trouble at all. wont catch me jamming anybodies transmissions or repeaters and that is what usually brings on the heat. the cb'ers are more resiliant than anybody wants to give us credit for being. if there telemetry and digital modes were to serve some communications purpose then we would out last them because they would soon find thereselfs with alot of problems from us just trying to have regular qso's if they were purely jammers it may be different. remember the free band is occupied by more people in foreign countries then there are here in the states and youll hear as many different laguages on 11 meters as anywhere so it would be hard to jam the whole world. besides, if all else failed there will still be them same people on at night after the dx and noise is gone talking local like there always have been and always will be. i find it real hard to even imagine there being a high power rtty station in every town.

I can think of a few, Jerry. If they stole the 11 meter band away from cbers, I think problems would INCREASE given the proliferation of cb radios in circulation. I foresee many more pirate radio stations (with music, commentary, ID's) in the future, ANYWAY. Many are getting smart and going about it mobile-wise, on any given day, at no particular time. True broadcast clarity suffers, but a market still exists for listeners. People are fed up with canned, piped in commercial garbage.
Could you even begin to imagine where the Feds would begin on enforcement with so many cb radios? Nothing surprises me anymore, though. Anything could happen at any given time.

ok dentronman,
when you get ready to sell that little box your so proud of let me know i need a new driver to put after my galaxy. after all i'm sure your like most hams and sell there boxes to cb'ers when its time to upgrade. for one this news is very old so therefore not news at all so i dont know why you posted. two these radios have been comming in since the 80's. they smuggle these radios inside big bricks of cocaine. they do this so customs will just think its regular coke and let the radios thru. very clever indeed! the guys importing these radios were probably at fcc headquarters helping to write the law that banned them. all this will do at the most is make these cheap to make radios cost more at street level and make the importers even more money off them. you know i see a couple of radios on that list that are sold at HRO and other places like that. maybe us CB'ers should lobby ole riley hollingworth to yank them from there product line since they are banned. and while there at it have them yank every yaesu, kenwood, and icom along with all the other brands because there easier to modify for 27 megs than any damn galaxy.

Well it has two tip's in it. Yes it does run hot. I do not understand why they did not put a heat sink on it. I was using it to charge 1 12 volt battery. Also on the back it has a place for plus and minus leads and also two field wires. I was using it to charge one battery in conjunctin with one 200 amp alternator

hey twist,

put the shoe on the other foot. how do you think all those guys in south
america feel about us speaking english? idiots here run echos and beeps on ssb
just like idiots there do. its just another part of dx'ing a world wide free
for all band. myself instead of hate them and cuss them i am always trying to
teach myself a little more spanish.

I don't hate 'em, Tim. I get the kid in to translate, you know the high school kids know everything. Some of the stations isolated by water in the islands just blast us here in the 'pile. I'm gonna throw a stone here and make myself a target, and maybe rightfully so, but is it just me, or do those espanol stations appear to key and talk and talk and talk and talk, all in one key. I mean, damn! I could scan the dial s-l-o-w-l-y and get back to where I started and still hear the same guy and he hasn't unkeyed ONCE.

> Dave KG5XR

The coupling between the mag-mount antenna and the metal of the car (or other iron-based abject) is capacitive in nature. The magnet does nothing but hold the antenna's base tightly to the car.... the capacitive coupling takes places across the thin film of paint (on a car) and the membrane on the magnet (which protects your car too). The plates of the capacitor are formed by the steel body and the magnet and the dielectric by the paint and membrane. High power and mag-mounts don't mix well as stated by Dave. If you use a magmount at home, without the metal beneath, you might try making some 'radials' out of copper wire, cut to about 103", and attached to the base of the antenna (same side that's connected to the sheild of the coax)... ought'a work OK.

Two Women waiting at the Pearly Gates strike up a conversation.
"How'd you die?" the first woman asks the second. "I froze to death,"
says the second. "That's awful," says the first woman. "How does it
feel
to freeze to death?"
"It's very uncomfortable at first," says the second woman. "You get
the
shakes and you get pains in all your fingers and toes. But
eventually,
it's a very calm way to go. You get numb and you kind of drift off,
as
if
you're sleeping.
How about you, how did you die?
"I had a heart attack," says the first woman. "You see, I knew my
husband was cheating on me, so one day I showed up at home
unexpectedly.
I ran
up
to the bedroom, and found him alone, watching TV. I ran down to the
basement, but no one was hiding there, either. I ran up to the second
floor, but no one was hiding there either. I ran as fast as I could
to
the attic, and just as I got there, I had a massive heart attack and
died." The second woman shakes her head. "That's so ironic," she says.
"What do you mean?" asks the first woman. "If you had only stopped to
look in the freezer, we'd both still be alive.

3616. The Midland 77-120 - Quick review...

Newsgroup: rec.radio.cb
Date: 2000-10-30 22:29:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <39fdd9a9.11991625@news.iserv.net>
Source record: 57454

Greetings!

After that -rather scathing- opinion on the 77-120, I guess I'd better give out my thoughts on this radio.

Looking over the 77-120, I was first reminded of the Pro-538W in a new shell. And in many ways, it is...

Featured...

On/Off-volume control, Mic gain - in one concentric knob along with Squelch, RF Gain - in the second concentric knob.

Channel Selector is a rotary knob.

Front panel - 4pin mike accepts Cobra/Uniden standard wiring mikes.

Buttons for...
Channel 9
ESP
WX
Frequency/Channel

Buttons are translucent and are backlit using green leds.

LCD display...
WX/TX indicators, S/RF meter with seven segments of resolution and are numbered like this...

sig 3 5 9 30+
RF 1 2 3 4

The nice thing about the LCD display is the Frequency or Channel display. The button toggles the function and gives you 5 digits with 3 digit accuracy after the decimal - XX.xxx - regular channels are displayed as XX with no decimal.

If you've read this far, hang on - I have the channel mod for you!

By my own personal experiences with Midland as far back as 1992 - with a Midland 77-160 [Road Max] I personally enjoyed the durability of the Midland Brand. They seemed durable enough...

Well, it wasn't going to last...
Since the introduction of the 77-113/77-115 series, this evolution seems to have gone the opposite.

The 77-120 is a new chassis design that looks promising in inital looks, for they have done away with the "Vertical Boards" that were so

prone to break connections due to frail solder traces and lack of solder to hold these boards. Vibration of ordinary driving made the main board flex, and hence the intermittent and eventual failure of the receiver side of these radios.

They've gone back to the basics, and it looks like they've learned some lessons. But, this is not a "durable" chassis like you'd expect. What it does have, is the "all in one Main" PCB but still have the vertical front board that handles the display and button selection.

Dynamite so far...
One glitch, with plastic being the main component of the front panel - my own personal radio is already showing segments dropping out and some other TX problems related to the front panel/display combo.

But I digress...

It has, ESP-2 noise reduction technology in SMD - using 2 simple LM384 audio amps and a TL064 dual op-amp, which when combined together make a small board thats bolted to the side of the chassis panel. It's wired in and can be bypassed. The ANL/ESP work at the same time, with the ESP off, you hear "ALL THE NOISE" and due to the small front firing speaker - has a poor audio quality too. Use an extension speaker if you're a quality nut or give out a lot of radio checks.

ESP works with receive only, so none of the main problems with ST and it's "expansion" for both receive and transmit. This radio does away with that and uses this little board as an audio filtering system. It's premise is the same as the ST, develop an general "RMS-weighted" value that sets a value of the initial noise present, and the circuit [using 3 trim pots that are adjustable], when engaged, samples audio from the first audio amp section on the main PCB and processes it either as a "pass thru" [above the noise] or compress [signal buried in the noise] lowering overall volume and changing the tone to a bassier "muffled" sound when the signal is too far into the noise level. There are 3 small trim pots which allow some "tailoring" but I don't recommend adjusting these pots. One adjusts the level of expansion, while the other two adjust the threshold of when the device activates or bypasses/releases the filtered and clipped audio that makes up the "muffled noise" when ESP is blanking out the noise.

What is promising about this radio is the display, having the frequency and channel selection, with the status of RF/Signal and what mode the radio is in TX or WX. It also has that famous "S/RF" mini-plug in the back for "using a VOM for greater resolution of Received Signal Strength", just fine if you like driving around looking at a VOM instead of the road - have fun! ;-) OK, so you can mod it to use it for remote keying of those special current muchers and heaters some of you folks have...

Major quirk? The S-meter display. On strong signals, the stock meter segments worked backwards.

The meter did not give good accurate readings listening to radios with heavy modulation with the ESP on or off. The segments would "vibrate" and be hard to see just what the person is giving you - this effect also occurs when skip noise is heavy and ESP will not blank it out for you. Although it tries to be nice about it, a fluctuating signal arriving to the radio under power lines and other attenuating objects, makes this a difficult radio to listen to.

A trick to help this is to use the RF gain control until the ESP can sense the noise and blank it out for you. You may need to ride the RF gain control a bit until you find the right level of the RF gain needed.

I have seen something on the Main PCB - C66 as part of the problem with the "swinging backwards" metering, and is a large value cap 470uF [Big value eh?] on the line for S/RF metering. Removal of this cap take care of this "backwards swing" problem to a point.

TX is good, using a condensor element - the audio is fair to good.

They have done away with one type of audio chip - the KTA7217 series, and are now using a TDA2003 style audio amp chip simplifying the audio section and is an improvement from previous designs. No more Phase Compensation and Gain problems causing some radios to squeal due to presence of RF on the input and output pins. You can run a power mike on this radio and enjoy the results!

To handle AGC/Squelch functions, they are using the NJM4558D [8-pin dip] and since it's dual - it also acts as a mixer for beep confirmations of front panel activity while pressing buttons and during the "boot" turn-on process.

Overall, plan on being surpized at this radios "capability". However theres a lack of good documentation to help you figure out the radio good enough to understand it before you use it.

Take a look at the owners manual and you'll see what I mean [It looks like and reads like, an Aircraft Manual designed on a TRS-80 computer - very sketchy and poor renderings] Midland has approached a new low. Someone at Midland found a cheap source for producing the manual - but the word "cheap" also applies to how it's put together. I wish Midland would offer a means or a site to view more details about how to install their radios - I hope they listen. No schematic supplied.

The radios receive, although good, the tone leaves a lot to be desired but typical for such a small speaker. With ESP engaged, it's a real dissappointment. With the ESP off, sensitivty is very nice but lots of background noise. With ESP engaged, stronger signals pass-thru which helps, but many weaker stations that other radios can hear are blanked out - an ESP quirk. Because of this, you may not hear the important calls. Something to think about.

The main controls are Off/On-volume, Mic gain - ganged together in a concentric knob, and RF Gain and Squelch ganged in the other -

although saves space on the front panel - a bane for fat or big fingers trying to quickly adjust something. Channel selection is thru the use of the 3rd knob on the panel. But no channel selection thru the mike. [Hello Midland! We need you to fix that!]

Overall? Even if it's on sale - the cheapest thing in the store, you might want to re-consider buying something else - this is nice radio, with a lot of quirks that can leave you frustrated.

As I work on the mods - as a list is developing here, you'll see why I feel the Midland worked this radio too quicky and did not iron out all the bugs before selling this item to the public.

Handy Andy - Unit 38 of the Sierra Bravo Club

Channel 35, 22 - Greenvile, Michigan

Channel Conversion...and RF meter correction...

Remove both covers, and remove C66 - it's the large value cap by Xtal and it's trim cap. Remove the foil covering the PLL chip to obtain access to the soldering pads.

Obtain 1 - 1N4148 diodes, open bottom panel Locate 10402 chip - it's under a foil shield - remove the shield by carefully unsoldering it to expose the chip and traces underneath.

Orient the board with the foil trace up, with front panel facing away from you.

Look on the bottom RIGHT CORNER - notice a large foil trace extending away from the bottom right pin on the IC. This and a set of solderpads just above it arranged in a row...

```
1 2 3 4
________ x x o x x x x x
PLL IC |= |
|= .-.
|= |-| <-band of diode towards top/front panel
|= |_|
10402 |= |
9BA0 |= ,******* <-large foil trace
________|=----'
```

Scrape off the "green paint" protecting the foil trace and tin it with a soldering iron. Install the diode with the band side towards the front panel - soldered to the 3rd solder pad.

Check for shorts and close cover.

Power up the radio. It should default to channel 19.

This gives you 120 channels - 40 up and 40 down - display in channel mode shows shows 19d - this is the CB band, rotate the channel selector and as you get to the ends 1 or 40 of the channel band, the

display will show C for below 40 while it will show E for 40 above. Pressing the FREQ/CH button will display the frequency of the channel.

This does disable the WX function. So if you want weather too, you'll have to install the diode on a switch mounted on the back panel so you can turn off the diode when you need to use WX. You'll have to turn off the radio first, switch off, then power back on again to enable the WX function. Repeat the above steps with the switch on to enable the extra channels.

You can't "toggle" thru the different bands with the Ch 9 switch anymore like the 77-113/115 series did - you'll have to use a separate switch and when you change the truth table - do it with the power off.

For some real fun, mount a series of 4 toggle switches and 4 diodes and solder each switch with a diode in line with them to the 4 leftmost solderpads. The 3rd one gives you the 120 channel conversion, but you can get 400 channels and nickels and dimes if you throw the switches as a truth table for logic controls.

All switches off gives you WX and normal CB.

I'll let you figure out the rest on that.

For Power and Tweaks...

To disable limiter, remove R503 - I use 330K to obtain some control over the limters recovery time and range.

Change R134 from 5.6 ohm to 2.2 ohm [1/4 watt] for more wattage on Final.

Tune T1, T2, T3 and T4, T5 for RX

Tune T8, T9, T10 and T11 for TX peaking - leave L4 alone but a slight tweaking of output coil behind C114 33pF will give some swing to the radio and improve the modulation headroom.

For Educational purposes only - not responsible for errors or ommission or any damages resulting from using this information.

You're on your own...

Tim,

There is validity to what you are saying about the door swinging both ways. However, a lot of the Central and South American stations using CB for their telephone have the same noisemakers. If you have the distinct pleasure of hearing one of the operators handling land wired to CB switchboard traffic saying 2 or 3 words repetitively for 3 to 5 hours with a noise maker on the end on every single transmission, it will soon get old.

On trying to get along with our neighbors, we hear the Hispanic truck drivers switch from English to broken Spanish about 10 miles south of our community. Monitoring them with beam antennas, we hear discussions about having fun with the M.F. Rednecks, the M.F. CBers, the M.F. Gringos, anything that can be preceded with M.F. All is in amazingly good English. When they roll into jamming range, they breakout into highly animated Spanish, speaking English long enough to throw an insult preceded by M.F. to anyone trying to use the channel for local communications.

I am all for putting the shoe on the other foot if a molecule of co-operation enters into the issue. However, these folks are not deserving of it, as demonstrated by their actions. We have tried again and again to tell them we will be glad to talk to them if they ask for a break, go out to meet for coffee, swap lies and exchange cultural info, whatever... if they would respond with a little civility. Last Summer, we had a driver come back through on vacation specifically to meet some of the folks he met while passing through the area over the road. And no, the locals do not hang out on channel 19. All of this takes place on channel 10; one of the "Official Hispanic Channels" If you don't believe it, just ask 'em.

When I mention the Hispanic problem, this is some of what I am referring to.....

David

Hello all,

I recently aquired a cb base station antenna but i have no idea what
make/model/brand it is.
I'll give you the best description that i can.

It is a groundplane antenna that has 3 telescoping pieces, 3 groundplane
radials and 3 whisker looking things attached to the very end of the top
tip. This is the second one of these that I've seen up close... just
wanted to know if any of you new what brand this baby was.

3628. Another truck antenna question / opinions needed.

Newsgroup: rec.radio.cb
Date: 2000-10-31 02:36:25 UTC
From: Tom Hutt <commando61AT@hotmail.DOTcom>
Message-ID: <cfqL5.753$5v6.10762@iad-read.news.verio.net>
Source record: 57466

Thanks for all the replies to my question about which antenna to use.
I decided to go with the Wilson 5000 for now till I find a tool box.
I ran the coax forward to the marker light, then
snaked it down the roof pillar to near the emergency brake. From
here it only needs to go another foot to the heater.
My question is what should I do with all the extra coax?
Should I coil it up or spread it out from driver to
passenger side under the dash and back to the heater?
Could I shorten it?
More advice needed.
thanks
Tom

Tom,

Use only what it takes to get from the radio to the antenna. That coax
length thing is a myth. Tune the antenna AT the antenna. That's all.

Just finished an install tonight of a TS500V driven by a 2950 in a friend of mine's late model GM passanger car. Vehicle has a factory 120 amp alt and 700 CCA battery. There is no problems what so ever and does not even load down the vehicles electrical system. Hardly even dims the lights at idle. No weird symtoms of any type. It can be done, just pay attention to detail and route all coax on opposite side of vehicle, away from vehicle computer. Make sure swr is 1.5:1 or below and use high quality coax. Use 4 gauge wire to amplifier. Good luck!!

DO NOT cut the coax shorter than 14' on a Wilson 5000. I prefer 15' min. If you have excess just spread it out.

Well it was getting very hot. I wonder why they don't put the correct
sized transistors in these things to do the job and then some. Has
xforce ever heard of overbuilding? I imagine it would save time on
repairs.

As he beat the podium with his shoe...

Did you know that Krusher's son is a 60'ish professor at an eastern university that just became a US citizen and is going to participate in his first, meaningful election? He was interviewed today on NPR.

There is nothing about legality or anything else involved here other than eBay caving in and doing what the small % of hams that have complained want them to do. Ebay sometimes shoots themselves in the foot over issues such as this. It's not the FCC that makes them do it. It's eBay that decides to do it.

I'm not sure how fast "WEBTV" is but it obviously is missing spell check, after reading most of your postings I must apologize, I wouldn't be right for me to criticize a person that is handicapped (mentally challenged) Here, I'll give you something to studywhile you are unemployed, you won't find any reference to this in your pocket guide to homosexuality, where you have apparently learned to screw anyone you come in contact with. Take a look at yourself! most people just find you amusing, and nothing more then that "amusing"!

Main Entry: friend
Pronunciation: 'frend
Function: noun
Etymology: Middle English frend, from Old English frEond; akin to Old High German friunt friend, Old English frEon to love, frEo free
Date: before 12th century
1 a : one attached to another by affection or esteem b : ACQUAINTANCE
2 a : one that is not hostile b : one that is of the same nation, party, or group
3 : one that favors or promotes something (as a charity)
4 : a favored companion
5 capitalized : a member of a Christian sect that stresses Inner Light, rejects sacraments and an ordained ministry, and opposes war -- called also Quaker
- friendï¿½less /'fren(d)-l&s/ adjective
- friendï¿½lessï¿½ness noun
- be friends with : to have a friendship or friendly relationship with
- make friends with : to establish a friendship or friendly relations with

Can anyone else hear these nuts
on channel 32?
....
Are you talking about the jerks in the cranes in Miami that are cursing and nothing is sacred to them? We heard them in North Carolina all day long all summer, but not now. Somebody else has to suffer for a while. They run about 300 to 600 watts, and peg your meter on and off all day. If you respond to them, or tell them to clean it up, they try to get personal with you by talking about one of your family members. I went to Fla on vacation, but couldn't hear them there, just 60 miles away from Miami.

Tom,
Cutting the coax to the proper length and re-soldiering the connector is the best way to go, but if you don't want to bother with that, snake the coax versus coiling it up. Coling it up into loops of the same size can produce funny results and even damage the radio.

Correct. eBay is not selling amplifiers, only allowing third parties to list
amplifiers for sale.

Would the FCC also hold a newspaper responsible if someone listed an amp for
sale in their classifieds? I highly doubt it.

That particular design usually works fine. Apparently your is faulty.

the
> first place, got what they deserved.

I disagree. Just like the drug trade, there would be no problem if there were NO BUYERS, regardless of who the seller mite be. In the case of illegal amplifier use, on 11m, the CB operators all have access to a copy of the Part 95 rules. The CB operators, using the amplifiers, in almost all cases know for a fact the use of the amplifier is illegal, but they go out, and buy them anyway because they don't give a damn about rules, or how their actions hurt others.

That callous disregard for the Part 95 rules is demonstrated by the frequent posts attacking anyone who points out the problem of illegal amplifier use on 11m. Out of band operation is another problem too. The level of denial is totally amazing. I don't see any interest putting and end to illegal amplifier use, and suggesting that the CB community work to clean itself up. Ham Radio is not perfect either, but at least I see many operators who are really interested in keeping the bands cleaned up. We have Official Observers to keep an eye on things etc., and enforcement does happen. Anyone can read the enforcement news on the ARRL web site for example. However here I see nothing but posts by CBer's who like nothing better than to keep 11m the over powered cesspool it has become.

You don't want to be familiar with this company. While I don't
have a problem with them stealing USA designs, I think they should
build a more robust antenna!

I remember when their "Sigma IV" knockoff came out! One little wind
and the top section would fold over PERMANENTLY!

If they are going to steal designs, they should have at least used
better aluminum!

Also, some antenna manufactures use that corrugated (extruded) aluminum
tubes. They do this for strength. Problem is is that they are NOT
stronger!

Ask yourself this...if corrugated aluminum was better, why do NONE of
the top antennas use it?

..and just like the drug trade, the government is making criminals out of otherwise law abiding citizens. IF there were no buyers...IF is a big word...simple economics 101...supply and demand. There is a demand, and frankly, Mr. Scott, there isn't a damn thing you or any other entity can do about that demand...like it or not. You are amazed at the level of denial? What? Did you just buy a radio? Are you new to this? Radio has been this way for years. There appears to be no denial, most of what you are referring to is intentional, pertaining to big watts and DX. I am amazed at your own abstract thoughts. The FCC has impotent laws, some which were passed involving no thought process at all. If it wasn't for people challenging laws which were questionable, and in certain instances, downright quasi-totalitarian, what masquerades as a democracy would rapidly deteriorate. Frankly, if cbers are ok with the situation on the 11 meter band, why do you give a damn?

Same old fatal dumb mistake other Hams make with Tech Class operators, so I'm going to point out a few things for you. Many Tech class operators, including me, don't care about HF DX, period. There is too much fun to had working satellites, ATV, various digital modes including packet and APRS, EME, Meteor Scatter using HSCW, to name just a few, can all be done with JUST a Tech Class license. And yes one can work VHF DX, if your wondering its even been done on 1.2GHz and 2.3GHz, and it takes more skill, and better equipment than working HF DX. So why would I want to be wasting time talking to the old timers, on 75m, about their health problems? Yuck. As a matter of fact most of the new developments in Ham Radio happen on VHF and up, particularly on the microwave bands. In short there is far more to Amateur Radio than working HF DX, something the old timers forget about all the time, and you.

Since a Tech Class license is so easy to get, a simple multiple choice exam, no code required, and you can run up to 1500 watts all day if you like. I passed the exam the first time, and I did not even study for it. Want to work HF DX, pass a simple 5 wpm code test, take another simple multiple choice exam, now you have your General Class license. With the General Class license you have your choice of bands from 160m to 10m on HF.

So the real question is not why I'm not working HF DX, but why CBer's, who like to work HF DX , don't get a Ham license, which is now easier to get than ever. If all you CBer's here are so very smart as you claim you are, then getting a Ham license should be a piece of cake. Its time to graduate from the band populated by outlaws, freebanders, over-modulated over-powered idiots with more money than brains, echo mics, roger beeps, jammers, channel control freaks, and the little kids who use the CB as a play toy by transmitting sound effects and various disgusting body noises or language.

Mr Scott,

While you were busy pointing out others' mistakes, you made one yourself. Tech licensees cannot run 1500 watts. As to the linear thing, you don't seem to get it that the illegal ops don't CARE! Thus, you are preaching to the "choir". Either that, or you just enjoy rais-ing peoples' blood pressures/reading the negative replies you generate. Now, I'm not saying I AGREE with the illegal amps--people here already know how I feel. I just try to get along with everybody and help with technical questions if I can. If I don't know the answer--and I DON'T know as much as some of the others on here--I just keep quiet. If you can't contribute something helpful--and the flames DON'T---I suggest you do the same. You, I, or all the hams around on the board could yell bloody murder all day long and it simply won't do any good. You keep talking about getting ham tickets. I'm sure those here are perfectly capable of doing so. But I suspect it's the posts like yours that turn CBers off to ham radio, doing an injustice to BOTH CB and ham radio at the same time. Ham radio does, indeed, offer more than CB (my opinion), but by ranting at the very people we whould be making friends with, you keep them from enjoying those experiences, and prevent ham radio from recruiting much needed new people. OK?

since you just amitted in another post that all your operating is on VHF why do you have a problem with any thing that goes on 11 meters? the only valid complaint amatuer operators have is the outbanding by export radios on 10 and 12 meters. since this problem doesnt effect you because your not even allowed to use these bads what is your complaint?

From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <8tmu71$2eq$1@mark.ucdavis.edu>
Source record: 57533

: Neomorpheous <vergaras@bigfoot.com> wrote:
: As far as I know, and linears for CB are Class AB,

For the most part, your are right. Tube amplifiers have subscripts of AB which describe certain types of operation in more detail. That would be AB1 and AB2 which is best described in an ARRL Handbook.

As you probably know, amplifiers are not legal for use in the CB band and amplifiers which operate near that frequency range can not legally be produced and sold. Ham amplifiers have to be modified to work in the 10 meter band (which is next to the CB band) where legal licensed operation is allowed.

: now, can anyone go to a
: Ham radio shop and buy a Class AB linear from them, and use on CB?

You can buy probably buy an Amplifier, but it will not work on the CB band. Most radio shops are so busy trying to hustle a dollar that they sell anything if you throw the money out there.

: Would it
: work, or does the amp has to be AB specifically made for CB?

There are many amplifiers sold which do other modes... like class C which is popular in FM operation and combinations there-of. For a mode like AM or SSB which is considered "linear", you want something that will reproduce the signal with the least amount of distortion. It's a trade off, but the general rule is that AB is about the best operation point for linear operation.
Hams also prefer class AB for linear operation. Class C for linear operation is a big mistake. Operation of any class C amplifier with a linear signal produces distortion and spurious output that you hear splattering up and down the band. Most often your neighbors hear it in their tv's and broadcast radios. I'd hear it in my guitar amplifier...

So one would prefer an AB designed and biased amplifier for SSB and AM operation. Because of rules in place by the FCC, you can't buy one out of the box legally which will operate on CB. Most ham HF (2 to 30MHz) radios output at least 100 watts, so most common ham amplifiers drive with that amount of input power.
A "converted to 10 meter cb" with 5 watts input would be wasting your time with so low drive.

Amplifiers were legally made at one time which operated with CB's, now they're still produced, but not by legal mfgrs.

cheers

Because it is blessed hard to do on 4-5 watts even without E and F layer skip. I noted before that because, or more precisely I believe because, of the TVI potential of the old TVs with 25.75 video i.f.s the power limit was set lower than was needed to do the job. Next time you see a Gooneybox, the old Gonset Communicator series, you will see what it was thought at the time in the amateur community the minimum mobile. If I recall, it ran about 25 watts to a 2E26 choke (Heising) modulated which limited audio to about 80%. In retrospect, the world would have been a lot happier with a few gazillion gooney boxes than with 4 watt pipsqueaks.

Since things have gone to garbage, it takes 300 watts to talk across the street.

Oh, you can here those stations on the ol' A99. Just fine. At least in Minnesota.
getting back to them is another case entirely. I very briefly qso'd with a unit
out of New South Wales about 3 weeks ago on the Antron. Swapped numbers and 73s...
and thats it:-)

seven don't sell that damn thing to that hawaiian, its bad enough i
have to listen to him with that damn 8 pill going on for hours on end.
if he got a hold of that thing, ain't no tellin what he would do. he
might even pump it up, God forbid, and it would be just awful for the
wonderful channel 6 community. also if you do sell it to him. be
careful, those hawaiians have a habit of not coming through on their
end of the bargain, just ask that puppy dude,........cd is out.....

Just like this...

November Whiskey SSB/AM DX Club
http://novemberwhiskey.cjb.net

Type in the full url and title if you want, thats all.

73s this Hallows Eve,
Land O' Lakes Station NW000 back quiet.

IT'S THE SAME THING AS IF YOU USED A TRANFORMER AND 1/2 OF ONE.
TO MAKE THE PORT COMB. YOU NEED.

THE WHEEL IS STILL ROUND MAN!

IT DON'T HAVE ALL OF THE BRASS AND COPPER CLAD ON THE ENDS.

SO YOU ALL TELL ME HOW COULD YOU COMB. A 24,32 48,64.AND SO ON.....

"MR.123 ILL."

Agreeing with Wild Bill. The Tech Plusses on 10 were subject to Novice power limits on HF only. One tech of recent acquaintance does EME work with an amp and array that would lift up the bowl and dump the soup.

What reason do they have to smack Joe around he is in partners with dave from my understanding , and Joe didnt come out here posting and using daves full name trying to start shit and be an asshole ..123 he deserves more than a NG smack around that is a fact. Is he really still in love with dave that he wants to be him on the NG? What does knowing rf have to do with someone doing somebody wrong ? you werent the one on the recieving end perhaps your tune would change if you were .. I'll guarantee this if it would have been me he , well he would have been building xforce out of a hospital bed. BTW, This asshole 123 you know the guy who you are sticking up for was going to turn the owner of Xforce in to Riley Hollingsworth of the FCC a few months back,why I can only think its jealousy and 123 knows its the truth because he talks to much and people find out thru the grapevine.

So if this is the guy you want on your side God Bless you deserve each other but watch the hell out and dont turn your back you have been warned

Dead key = The transmitted signal without any intelligence
(modulation) added to it. A carrier wave.

Modulation = Normally voice intelligence (audio frequencies)
added to the carrier wave.

hmmm,
you wouldnt be implying he is using illegaly high power now would you??? as far as the array i am sure it has anything on the bowl beat strictly because the antennas are so much smaller and easier to stack. there is more than a few guys running a pair of 8 element yagis stacked really high off the ground on the bowl and i personanlly know one running 4 stacked. dont ever underestimate these guys and the money they spend just to talk on that one frequency only and even then not having real conversations.

Deadkey is when you key the mic (depress the ptt switch) without sound.
Modulation is when you talk into the mic (activate the carrier with sound) .

hey wild bill, nobody ever made any mention of that being daves full name until
you just told the world. i tried to make a joke out of it but dave owes all the
thanks to you for drawing everybodies attention to the fact.

>
>What reason do they have to smack Joe around he is in partners with dave

Quite an antenna. I wish I had a pic of the rhombic we used back in 68. One guy ran phone patches regularly to the states from that thing. It was located at the US Naval transmitting facility on Guam Island. He only ran 20 watts and could work patches almost every day. The rhombic was 600 feet on each leg and 200 feet in the air! We used it once - the executive officer wanted a patch and the band was virtually dead. The killowat stations in California were running S-2. When a station out of L.A. told us we were pretty well buried in noise, we gave up on the Henry 2K into the TH6-DX beam up 102 feet and .... turned on a 40KW military transmitter into one of the rhombics. We got a guy in San Francisco who asked 'what in hell are you guys running? I can't even hear Japan and you're 40 over 9!!!' Yes, the XO got his phone patch!

I don't know anything. But when ducks and geese fall out of the sky
pre-cooked one gets a tad suspicious.

It is the array that is impressive particularly when it must rotate both
azimuth and elevation. It is in a league with the one on a recent cover of
Q-Street; the one that looks like an explosion of aluminum spaghetti until
someone tells you it is an EME array.

Near the park in St. Louis where our club met was an aluminum cloud on a
tower well over 100 feet with stacked 20 meter beams and a host of other
ones in which the entire tower was rotated on a platform with a big gear and
chain drive.

I never underestimate the extent of insanity or ego.

Hi All....

I know this has nothing to do with CB Radio.... but are there any NG's related to the Body Shop Trade? (As in Auto Body shop) I'm starting a new trade and was wondering if there's any body shop related NG's around.... or web sites?

just wondering....

(oh, and if you're wondering, I'm a painters helper...)

P.S. Any other Bodymen or painters in here???

It just gets old hearing the same old shit. Believe me I know in FULL detail the whole deal behind him leaving Dave and doing his thing. I just get tired of hearing the same old shit. He is not the one that went around bragging about how X-force was a DaveMade copy, and that was the main thing that made them sell. I never once agreed by any means of what he did. This happens all the time in the business world. Anyone could have done it, and you are right I would of felt different if it happened to me, but it would not of surprised me either way.

JAY LENO ON AL GORE!

"Al Gore ... he once was pro-life, now he's pro-choice.
He once was against gun control, now he's for it.
He claimed he invented the Internet.
Hey, Gore just needs to debate himself!"

"Al Gore visited a bookstore today. He was shocked to find
a book about everything he has said in his campaign could
be found in the fiction section."

"Our country has come a long way: first we had George
Washington, who couldn't tell a lie. Then we had Bill Clinton,
who couldn't tell the truth. And now we have Al Gore,
who can't tell the difference..."

3764. Re: Al Gore He is our Man he can't do it NO Damn Bush Can!!!!!!!

While Al Gore has a habit of exaggerating his record,
these numbers tell us the real truth about his record on
education, healthcare and taxes:

AL GORE'S EDUCATION PLANS...

$10,000... tax deduction that Al Gore says will be received
by "all students who want to go to college".

$800... tax deduction is the reality.

0... students working their way through college getting a
tax credit because they do not pay enough in income taxes.

30,000,000... low-income households get no benefit on
Gore's education plan.

0... families making over $20,000 get a benefit.

5,000,000... upper income families are ineligible.

0... deductions or credits for room, board, books, supplies,
and travel.

1... education plan that is almost identical to the one that
failed in the Clinton White House.

AL GORE'S PROGRAM ON HEALTHCARE:

$600... access fee per year to obtain prescription drug
coverage under the Gore plan.

412... new regulatory mandates created by the Gore
Medicare plan.

182... new regulations dealing with prescription drugs alone.

64.5... the age you are when you have your one and only
opportunity to buy into a government HMO.

8... year wait for Gore's plan to be implemented.

2... times the price of Bush's plan to create more government
bureaucrats

THE VICE PRESIDENT ON TAXES:

88... separate tax increases along with 42 new user fees Gore
proposed in the 2001 budget.

11%... how much the tax burden has increased over the last
8 years.

$500... per child tax credit was never included in previous
Clinton/Gore budgets.

50,000,000... taxpayers will not get tax relief under Gore's plan.

$1,400... couples will pay in taxes because Gore opposed
the Marriage Penalty tax cut.

4.3 cents... tax increase on a gallon of gas because of
Gore's tie-breaking vote.

THE MOST IMPORTANT NUMBERS:

7... days until the election.

PLEASE PASS THIS ON TO ALL YOUR FRIENDS!

Hi Guys,
I posted earlier and didn't get any help so
I am sending out a plea again.

I need the VCO or a parts radio for the
Cybernet 40 channel SSB PLL02A chassis.
Mine is the Midland 79-892 but this popular
chassis went by many names. I will list the
models below. If you have a parts radio listed
or the part that I need Please email me. The
designation on the part is "ZZ-Z017". This a
partial listing. It is also used in the Dak X,
and the GE Superbase but I'm not counting on
finding these as parts radios.
Thanks... Larry

Apollo AP704
Boman CB950
Cardon Iroquois 40
Colt 480, 485DX, 890, 1000, 1200
Gemtronics GTX77
GE 3-5825A
HyGain 2705 (V), 2785,3108 (VIII)
JC Penney 981-6247

From: primecase@my-deja.com
Message-ID: <8to8ho$4q7$1@nnrp1.deja.com>
Source record: 57657

Hi All
I'm looking at buying a Jackson for my humble shack and I was a little disturbed to find that the Jacksons they are selling are not the same as those in the 80's PB042 chassis (I know, progress etc.)The newer versions have more bands but that is about as much as I can find out. What is the difference between the older and the newer radios? maybe a techie can answer this question. What I really need to know is have they ruined the excellent receiver performance? AGC problems withstanding :)

thanks

Kevin

3784. Any good amp techs around Pittsburgh, Pa ????

Newsgroup: rec.radio.cb
Date: 2000-11-01 13:45:41 UTC
From: lzboyz@aol.com
Message-ID: <20001101084541.24541.00000960@nso-mg.aol.com>
Source record: 57672

I need a 2x4cx250b amp repaired. I bought this unit from The Tube Man, Richard Hale, and it doesn`t work. He sold me a junk amp.
Need the location of a good repair place that can handle it.
Thanx for your help
Randy

3785. I got ripped off by Richard Hale "The Tube Man" Please read

Newsgroup: rec.radio.cb
Date: 2000-11-01 13:45:44 UTC
From: lzboyz@aol.com
Message-ID: <20001101084544.24541.00000961@nso-mg.aol.com>
Source record: 57673

I wasn`t real sure I wanted to put this on here, but if it helps someone else it was worth it.

I purchased a used amplifier from Richard Hale, from Florida, that uses 2-4cx250b tubes.I was told that the amp does 600 to 700 watt deadkey with 1 watt drive (will take a max 2 watt drive).1200 to 1400 watt output with a 12 watt swing. This is using a bird meter. It has a larger transformer installed to handle 350 tubes. I was also told that on a scale of 1 thru 10 this JohnBoy amp was a 9+.

Well, you can pretty much guess what I got.

Lets forget the 1 thru 10 scale completely. Even though I would have been embarrassed to sell this thing myself, I could over look the "junk look" as long as it does what it should. It doesn`t do what it should do. I`m getting 140 to 150 watt deadkey with a 2 watt drive and this is with the unit on hi. He now tells me that this amp was designed as a driver with a 150 deadkey and lots of swing. More bullshit.
I`m not real happy at the present time so I`m controlling what I am typing.

I asked for my money back. I told him to get it fixed and sell it to someone else and I would pay for any damage that I might have done to the amp. This was not acceptable to him. No friggin wonder, with this piece of shit amp he sold me.

Buyer beware. Don`t make this same mistake.
Stay away from;
Richard Hale
The Tube Man
from Florida

Unless you want to toss money away. If you do, I`m taking donations so I can get this friggin piece of shit fixed.
This kind of shit makes me sick. You trust someone and they stick it to you.

Does anyone know if this guy operates out of a house or a shop ???
I`m curious.

Thanx for reading.
If you have had good dealings with this person, I`m glad for you. This is a warning to anyone who may be thinking about dealing with this person. You have been warned.

Any good amp techs around Pittsburgh, Pa. ????????????

> you do the same.

Sorry, but no. The flames are generated by those posters who seem to have an agenda to KEEP things just the way they are. Now why anyone would logically want to keep 11m in the chaotic state it is in beats me. You really need to sit back and look at the content of those posts. I have yet to see one poster, CBer, who agrees that amplifier use on 11m is illegal, AND ACTIVELY ADVOCATES their elimination from the band.

What is being attempted here, by those who are most distressed by my posts, is not unlike what happens in the drug trade. When the drug dealers move in they bully everyone in to submission to leave them alone, then the neighborhood goes to hell. Here we have rouge CB operators, or posters, who try to bully those that are interested in keeping things cleaned up, in to submission, then they do whatever they feel like, regardless of whom it hurts. Just look at the "Superdave and the pottymouths on ch 32" thread for example. It seems to me the question there is not which side of the amplifier issue a CBer is on, but which side of the amplifier!

see jerry just made a simple mistake. he assumed since your always complaining about cb'ers that you must have 10 meter priveledges since that would rationalize why your always complaining and the 200 watt level would be true on ten. but indeed he was wrong and your just complaining just to complain since the closest thing to hf you talk on is 50 megs

No bullying going on MR. Scott, you just simply have not presented one good merit concerning your stance other than "it's the law". Also, no one is "distressed" by your posts, you give your self too much credit. Bemused is more like it. The analogy to drugs was addressed yesterday. If you perhaps missed it, or didn't understand, go back and reread.

> Since things have gone to garbage, it takes 300 watts to talk across the
> street.

A good chunk of that garbage is the "300 watts". Cber's have a solution if they want to spend the money. A good CB SSB rig can communicate across town for a reasonable range on the legal 12 watts PEP they generate, which is only 3 db or half a "S" unit down from the 25 watts you spoke about. I know because I did when I was in to CB over 20 years ago. The real problem is all of the really cheap, and crappy, AM rigs in use from, for example, Rat Shack for 50 bucks. It is hard to pick out a voice when you have dozens of heterodyne tones to pick through, which you don't generate if all operation was SSB.

If you stop and look at two CB stations, one running 300 watts AM in to a 5/8 wave, and the second a stock SSB rig working in to a good multi element beam antenna, the two stations are about equally effective at communication with a like station. The difference being one is running legal, while the other is not.

From an operational, and technical, stand point CBers would be better off putting their money in to better radios, SSB, and antennas. We know from experience, in Ham Radio, that amplifiers are not needed most of the time, except when conditions are poor and we are operating at the noise floor, which is frequently the case when operating DX stations.

CBers have to remember that 11m is not meant to be a DX hobby radio band, that is what Ham Radio is for. I think it was Alan Dixon, a Ham by the way

writing for Popular Communication, filed with the FCC requesting the 150 mile limit be removed from the Part 95 rules on behalf of CBers. The FCC denied the rule change request, and pointed out what I have outline above, about DXing and hobby radio.

So if the collective CB community moved from mainly AM to SSB, I think things would be much better, and of course, less need to run "power" to talk across town. The cost now days of a CB SSB rig is not that much more than a "good quality" AM CB.

I don't get it?!!! The BIG beam is a full blown quad! Not a Moonraker knock-off or a quagi!

You can't see the wires? NOPE! What you see are the SPREADERS!

Now I think it is odd that he went for a diamond shaped antenna, but it is his to do with as he sees fit.

So everyone....get off it and understand it is a QUAD!

Thank you...have a nice day.

> for some reason you guys are thinking its not a full qaud when it is....

It's a quad-type antenna allright..... but a single element Quad is nothing more than a vertically mounted (NOTICE, I did not use the word polarized) full-wave loop...

A Quagi is nothing more than another name for a Yagi-type Quad... multiple elements (a driven element, directors & a reflector) on a boom, similar to a Yagi... Therefore, Quagi.

It could also be called a 'Beam' antenna, but that's far less descriptive .. like saying its a Quad.... or for that matter, a 'full' quad' (your words... ever hear of a 1/2 Quad? ...1/4 Quad?.. no such animal). Saying its a 10 element Quad tells me its got 10 elements... not much else. Tell me it's a 10 element Quagi and I know it's a Yagi-type design with 10 elements that has PROVEN performance.
What I saw in the picture was a Quagi.... (with proper Yagi-style element spacing and design) I'd guess in the neighborhood of 10-13db gain (NOT dbi).

It's a quad-'type' antenna alright..... but a single element Quad is nothing more than a vertically mounted (NOTICE, I did not use the word polarized) full-wave loop...

A Quagi is nothing more than another name for a Yagi-type Quad... multiple elements (a driven element, directors & a reflector) on a boom, similar to a Yagi... Therefore, Quagi.

It could also be called a 'Beam' antenna, but that's far less descriptive .. like saying its a 'Quad'.... or for that matter, a 'full-blown' quad' (your words...
ever hear of a 1/2 blown Quad? ...1/4 blown Quad?.. no such animal). Saying its a 10 element Quad tells me its got 10 elements... not much else. Tell me it's a 10 element Quagi and I know it's a Yagi-type design with 10 elements that
has PROVEN performance. What I saw in the picture was a Quagi.... (with proper Yagi-style element spacing and design) I'd guess in the neighborhood of 10-13db gain (NOT dbi).

I wouldn't buy from anyone that is not prepared to prove what they say. Take your own wattmeter too. This will protect both of you in the event of a breakdown or misunderstanding. We all know someone that bought a four thousand watt 8-pill and the meter too. To me this ranks just below CB credit. It can turn long time friends into public and embarrassing enemies.

3831. Today's Joke #2.

Newsgroup: rec.radio.cb
Date: 2000-11-01 18:23:21 UTC
From: scsiudma@aol.com
Message-ID: <20001101132321.13342.00000023@ng-cv1.aol.com>
Source record: 57768

A man walks into a pharmacy and wanders up and down the aisles, the sales girl notices him and asks him if she can help him.
He answers that he is looking for a box of tampons for his wife. She directs him down the correct aisle.
A few minutes later, he deposits a huge bag of cotton balls and a ball of string on the counter.
She says, confused, "Sir, I thought you were looking for tampons for your wife?".
He says, "You see, it's like this. Yesterday, I sent my wife to the store to get me a carton of cigarettes and she came home with a tin of tobacco and some rolling paper. So, I figure that if I have to roll my own, SO DOES SHE!"

It is illegal but there is more than a 100,000 people who do it. Legal or not it is happening and the fad is getting hotter it seems and you seem to be one of the few people that really give a damn. I could see it bothering you if it was interfering with your daily life, but it looks more to me like a personal bitch you have and nothing more than that. To me you seem to be wasting time. Seriously why not find something more useful to do with your time like the fight against drugs or gang violence. Hell start a charity to help feed the less fortunate people in the world. Peace is a nice word but very hard to achieve especially when you see people like you stirring the pot and starting trouble. I understand that a lot of the radio policing that goes on involves the amateur radio operators but don't you ever feel you are taking it a little too far.
Peace

ok so i'll ask you. what should be done to this antenna to make it a quad and not a qaugi? i just got to hear this.

>
>It's a quad-type antenna allright..... but a single element Quad is nothing
>more than a vertically mounted (NOTICE, I did not use the word polarized)
>full-wave loop...
>
>A Quagi is nothing more than another name for a Yagi-type Quad... multiple
>elements (a driven element, directors & a reflector) on a boom, similar to a
>Yagi... Therefore, Quagi.
>
>It could also be called a 'Beam' antenna, but that's far less descriptive ..
>like saying its a Quad.... or for that matter, a 'full' quad' (your words...
>ever hear of a 1/2 Quad? ...1/4 Quad?.. no such animal). Saying its a 10
>element Quad tells me its got 10 elements... not much else. Tell me it's a
>10 element Quagi and I know it's a Yagi-type design with 10 elements that
>has PROVEN performance.
>What I saw in the picture was a Quagi.... (with proper Yagi-style element
>spacing and design) I'd guess in the neighborhood of 10-13db gain (NOT
>dbi).

I have a tube amplifier forsale... 2-tubes, does just about 100watts and gives a nice warm audio quality... The only name on the unit is "Afterburner" and there is a metal plate rivited to the back transformer saying it is for use on the 10 & 6 meter bands, but the amp works great on 11meter band. The amp plugs directly into the house current so, no extra power supply needed. I have the original tubes (which are still good) that came with the unit, but have since installed a new set about a 6mos ago and I also have another new set of tubes - just in case. It has, AM/FM - SSB/CW switches, standby/TX switch, Tune & Load knobs and of course, ON/OFF... Price is $125.00 - maybe I will pay the shipping, depends where you are located...

serious inqueries only... 73's Rich BCNY@aol.com

news:Mb_L5.377$0M1.27600@nnrp3.sbc.net...
> Your right but what if someone just plain doesn't like SSB.

It was like that many years ago, when most Ham operators used AM, on the Ham bands too. It was called "duck talk", SSB, by those who disliked it. Now most use SSB while a few still enjoy using AM. There is nothing technically "wrong" with AM, but it is not efficient as SSB, and occupies 2 to 3 times the spectrum compared to SSB. The only problem I see is a good SSB rig will set you back about 200 to 250 bucks. A cheap AM only Rat Shack special is 50 bucks. A CBer's money is better spent on a good SSB rig and antenna. Money spent on an AM rig and an amplifier is poor economics. There is even movement to get commercial international broadcasters to switch over to SSB only transmissions.

An AM radio connected to an amplifier is a huge waste of power, money, and spectrum space that on 11m is in short supply. I did some quick calculations to see the numbers for myself. Lets use an example of a 300 watt linear. The way I see it for an undistorted signal 300 watts output is the maximum. For a 100 percent modulated signal half of the power found in the carrier is in both sidebands. So at 300 watts of output that would be 200 watts on a dead key, and a swing to 300 watts under full modulation. That now leaves 100 watts in BOTH sidebands. ONLY one sideband is really needed so we can drop half of the calculated sideband power, which now leaves us 50 watts. Now if we do some more math (10*log(50/12)) we find the SSB power is only 6.2 db (about 1 "S" unit) down from what could be done by a stock CB SSB rig, if it was connected to the same antenna as the AM rig, WITHOUT an amplifier! Seems like spending so much money on a linear, only to use it on AM is a bad joke at the AM operator's expense. The guys selling these things to AMers must be laughing all the way to the bank. Of course it looks cool when you make that little needle fly way up scale, until you figure out that's what almost all of your money, and power, is doing, just that - making that little needle move.

When Hams figured out that AM was too inefficient, the wide spread switch to SSB came as quickly as equipment could be built. The only reason things like AM and FM are around are the circuits are simple, no complex balanced modulators with crystal filters in the IF section are required. FM is used because the audio quality is better than AM, and the modulator is nothing more complex than a varactor diode in the oscillator section many times. Frankly I don't understand why CBers don't move to SSB operations in general, other than the money issue. When I was in to CB over 20 years ago the above facts were not lost on me. That's why I was on sideband mostly, then some of the idiots in the neighborhood got amplifiers..... a few hundred watts of carrier doesn't sound good on SSB.

<< The flames are generated by those posters who seem to have an agenda to KEEP things just the way they are. Now why anyone would logically want to keep 11m in the chaotic state it is in beats me. You really need to sit back and look at the content of those posts. I have yet to see one poster, CBer, who agrees that amplifier use on 11m is illegal, AND ACTIVELY ADVOCATES their elimination from the band.

What is being attempted here, by those who are most distressed by my posts, is not unlike what happens in the drug trade. When the drug dealers move in they bully everyone in to submission to leave them alone, then the neighborhood goes to hell. Here we have rouge CB operators, or posters, who try to bully those that are interested in keeping things cleaned up, in to submission, then they do whatever they feel like, regardless of whom it hurts. Just look at the "Superdave and the pottymouths on ch 32" thread for example. It seems to me the question there is not which side of the amplifier issue a CBer is on, but which side of the amplifier!

Leland C. Scott
KC8LDO >>

Leland, you are so right on. Unfortunately there is a group of regulars invested in keeping rec.radio.cb more or less devoted to the practice of operating "outside the law".

I have seen a few legitimate CB users attempt to disagree with the emphasis on power and freebanding here. They are almost immediately shouted down by the regulars.

More than a few here are involved in the hard core side of the illegal cb business. Appealing to their common sense is futile. They don't care about other people's rights. They thrive on the chaos of 11 meters. It's like a game played by particularly mean children where instant gratification is the only rule. These are the kind of people that would consider a store with its door unlocked "fair game" to be looted.

Your posts, however well meaning, merely aggravate and stir up this group. In some cases, your challenges only increase their resolve to remain gleefully anti-legal.

Better to devote your energy to defending the 28MHz line.

The fact that "anything goes" is accepted on CB, and in fact is one if its unfortunate "traditions". It is much like a Wild West town without a Sheriff. The loudest voice prevails.

Notice that you will NEVER hear any discussion in rec.radio.cb about receiving. It's all about more RF power output, bigger amplifiers, bigger antennas, more powerful microphones, etc. Not one word about receiver stability, sensitivity, or dsp filtering. Not one word about receiver audio fidelity. Not one word about antennas that help pull out weak signals. Nothing. The entire emphasis is on TRANSMITTING.

I think you are getting the picture now.

I already figured that much out, CB is NOT about communications at all. The manufacturers could save a lot of money by not installing speakers in the radios, since nobody, on 11m, cares about what they can hear, by your comments. 8-))

Yes, a higher gain antenna works BOTH ways, on TX as well as RX. The antenna can't do anything about how the signal is modulated, but a high gain antenna can put a higher signal level on the air, and can boost the received signal level too. Its all about "gain" and if you sit down and work out the gain vs. dollars you may see it make more sense to spend money on a better antenna system. That's why you always see Hams working on their "antenna farms". The saying goes "if you can't hear them, you can't work them".

I have to agree with 123, he might not type worth a shit but he was right when he said to add another 36C. He did not go into detail but he did say to do this and it will double the allowable field current on that regulator.

i downloaded the picture and opened it with photoshop I can see the wire now albeit it is faintly on my 15" screen. The funny part is my comment as seen below triggered all these great replys from the NG geeks. Did anyone read the part where it says from what I can see? the brighness of the picture is not the greatest and the rear wire is much more apparent than any others.

Tim, I am not doubting the wires are there I do see them now with a different viewer , but my post was > "very impressive but it is not a true quad from what i can see ..It is like a moonraker"... That is all I said "from what i can see" everyone else is making a big deal about it Frankly I dont give a rats ass what they see or think. I am not doubting your word that they are there... I am not calling it a six meter antenna like hillbilly, I only said from what I could see that is all i have to go one is what pops up on my lousy screen.. I am not rich like you other guys out here i have a old 15 " monitor and have to go out and milk the cows everyday to get by.

Hi,
I haved owned both radios and i think thed Grant XL is more user friendly
than the LT the radios
output is about the same, the reciever on the LT has a lower noise floor but
it is not worth changing radios for. the Clifier on the XL is a lot smoother
and easer to use than the LT and the DSC only works when there is not any
SKIP. Hope this helps you!!!!!!!!!! OLDTIMER

And what I am saying is, do you think that by coming on the boards and preaching at those who already KNOW what they are doing, and don't CARE that the illegal amp use is going to come to a SCREEEEECHING halt just because of YOU? I know that there's a lot of illegal activity going on just like everybody else knows it, BUT there ain't a durned thing I can do about it. We already KNOW what ole Riley's doing or not doing, so posting this stuff ain't helping a thing. All it does is create a long thread of flames which you ENJOY reading. Instead of complaining about the stuff on 11 meters, how about monitoring 28.085 and snitch on the bootleggers up there?

Yes, I did make a mistake on the 1500 watt rule on VHF. I make mistakes sometimes, OK? Since I don't USE 1500 watts on any band, I never spent much time thinking about it. I CAN, but I doubt I'll ever own a high-powered amp or run such power. I do fine with 500 or less on 80-15 me-ters. Mostly less.

Since your Don Quixote methods (jousting at shadows and tilting at wind-mills) isn't working, why don't you chill out?

NEWINGTON, CT, Oct 30, 2000--Recent FCC reports suggest that the operation in and around the 11-meter Citizens Band by licensed amateurs continues to be an enforcement issue. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth thinks he knows why a few hams--who already have extensive spectrum privileges--are drawn to 11 meters.

"I think they feel they can do what they want to, whether it's to cut up or play," he said this week. In addition, Technicians lacking HF privileges may be attempting to skirt that restriction by resorting to 11 meters instead of taking the Morse code test. According to FCC enforcement reports, some Amateur Radio operators have operated on CB channels or between them (the so-called "freeband") using ham gear that is not FCC-licensed or approved for the purpose.

"They think it's not taken seriously," Hollingsworth added. But it is taken seriously, and at least one now-former ham has received a stiff fine as a result of his 11-meter operation.

On July 12, the FCC issued a Forfeiture Order telling Leonard D. Martin, formerly KC5WHN, to pay a $4000 fine for repeated unlicensed operation on 11-meter frequencies and for failing to allow the FCC to inspect his radio equipment.

Martin, a former Technician licensee, first ran afoul of the FCC two years ago. FCC agents using mobile automatic direction finding equipment tracked voice transmissions on 27.370, 27.535 and 27.545 MHz to an antenna at Martin's residence.

Last year, Martin voluntarily turned in his Amateur Radio license for cancellation but he apparently couldn't stay away from 11. Last fall the FCC again tracked transmissions on 27.535 MHz to his residence. He initially faced a $17,000 fine.

This month alone, Hollingsworth sent enforcement letters to amateur licensees in Georgia and California regarding unlicensed operation in and around 11 meters. Curiously, at least some of the

alleged offenders have identified by using Amateur Radio call signs.

While some of the offenders may believe that operating on 11 meters is the functional equivalent of flying under the FCC's radar--thus offering greater freedom in choice of language and discussion topics--Hollingsworth says other amateurs seem to think it's great sport to QRM CBers and freebanders.

"Some are doing it because they don't like what they hear on 11 meters," he said. Hollingsworth says a few amateurs believe they can maliciously interfere with CB and freebanders and not get caught.

In one recent case, Hollingsworth cited "monitoring information before the Commission" alleging that one West Coast ham may have deliberately interfered with other operators by transmitting sound effects as well as using non-FCC-certificated gear or illegal amplifiers.

But whether or not the other stations are operating outside the law is immaterial, Hollingsworth says. "It doesn't matter why they're on there," he says. Hollingsworth points out that the 11-meter Citizens Band is allocated into 40 specific channels, each requiring the use of relatively low-power FCC-certificated equipment. Ham gear may not be used on CB under normal circumstances.

Operating on the so-called "freeband" outside of the 40 CB channels raises other legal issues, since those frequencies already are allocated to government and industrial users or as so-called "guard band" channels that help fence off CB and the other services. Transmitting on those frequencies could result in harmful interference. Even worse, if a perpetrator is caught, the fines for unlicensed operation--as already noted--are steep.

The bottom line, Hollingsworth says, is that amateurs should resist any temptation to transmit anywhere on 11 meters unless they're using equipment that's FCC-approved and/or licensed for operation there. Otherwise, they risk fines and possible loss of their amateur tickets.

FYI, for what it's worth....
****

The ARRL Reports.

NEWINGTON, CT, Oct 30, 2000--Recent FCC reports suggest that the operation in and around the 11-meter Citizens Band by licensed amateurs continues to be an enforcement issue. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth thinks he knows why a few hams--who already have extensive spectrum privileges--are drawn to 11 meters.

"I think they feel they can do what they want to, whether it's to cut up or play," he said this week. In addition, Technicians lacking HF privileges may be attempting to skirt that restriction by resorting to 11 meters instead of taking the Morse code test. According to FCC enforcement reports, some Amateur Radio operators have operated on CB channels or between them (the so-called "freeband") using ham gear that is not FCC-licensed or approved for the purpose.

"They think it's not taken seriously," Hollingsworth added. But it is taken seriously, and at least one now-former ham has received a stiff fine as a result of his 11-meter operation.
On July 12, the FCC issued a Forfeiture Order telling Leonard D. Martin, formerly KC5WHN, to pay a $4000 fine for repeated unlicensed operation on 11-meter frequencies and for failing to allow the FCC to inspect his radio equipment.

Martin, a former Technician licensee, first ran afoul of the FCC two years ago. FCC agents using mobile automatic direction finding equipment tracked voice transmissions on 27.370, 27.535 and 27.545 MHz to an antenna at Martin's residence.

Last year, Martin voluntarily turned in his Amateur Radio license for cancellation but he apparently couldn't stay away from 11. Last fall the FCC again tracked transmissions on 27.535 MHz to his residence. He initially faced a $17,000 fine.
This month alone, Hollingsworth sent enforcement letters to amateur licensees in Georgia and California regarding unlicensed operation in and around 11 meters. Curiously, at least some of the alleged offenders have identified by using Amateur Radio call signs.

While some of the offenders may believe that operating on 11 meters is the functional equivalent of flying under the FCC's radar--thus offering greater freedom in choice of language and discussion topics--Hollingsworth says other amateurs seem to think it's great sport to QRM CBers and freebanders.
"Some are doing it because they don't like what they hear on 11 meters," he

said. Hollingsworth says a few amateurs believe they can maliciously interfere with CB and freebanders and not get caught.

In one recent case, Hollingsworth cited "monitoring information before the Commission" alleging that one West Coast ham may have deliberately interfered with other operators by transmitting sound effects as well as using non-FCC-certificated gear or illegal amplifiers.

But whether or not the other stations are operating outside the law is immaterial, Hollingsworth says. "It doesn't matter why they're on there," he says. Hollingsworth points out that the 11-meter Citizens Band is allocated into 40 specific channels, each requiring the use of relatively low-power FCC-certificated equipment. Ham gear may not be used on CB in any event.

Operating on the so-called "freeband" outside of the 40 CB channels raises other legal issues, since those frequencies already are allocated to government and industrial users or as so-called "guard band" channels that help fence off CB and the other services. Transmitting on those frequencies could result in harmful interference. Even worse, if a perpetrator is caught, the fines for unlicensed operation--as already noted--are steep.

The bottom line, Hollingsworth says, is that amateurs should resist any temptation to transmit anywhere on 11 meters unless they're using equipment that's FCC-approved and/or licensed for operation there. Otherwise, they risk fines and possible loss of their amateur tickets.

good for hollingworth. best i can tell from this memo he is going after the jammers that need to be gotten regardless of what band. this leonord guy has been a real idiot for a while and deserved what he got simply because he has been warned too many times. notice the fcc didnt do anything the first couple times just warn him and take his ham call but no real physical or monetary punishment. i think this is a very good thing. i think it means riley will be going after big time bob as well as the guy richard and the others that has been jamming triple nickle. notice for some reason riley has only busted hams for freebanding??? nobody else so far

Most CB'ers don't read those, I don't mind pertinent info regarding CB or freeband updates, although FRG intends it as "scare tactics" instead of simply posting the info.

3909. Cured fuel pump noise by accident.F.Y.I.

Tim, I think you are missing the point. Riley is Special Counsel for AMATEUR Radio. The defense of the 28 line has at least three parts:

1) Doing in a few well-known burrs under the saddle in the Amateur Service. This continues apace; there is a backlog and as I noted, undermanned enforcers tend to like public crucifixions.

2) A beating up on a few of the more egregious invasions of the non-commercial spectrum by commercial interests. Riley is only a part of this effort.

3) An economic attack on goofball CB gear. You will and have seen some sabre-rattling (E-Bay) done mostly to impress the amateur community (that word again) and to establish some rocks and shoals in the stream of trade. As time grinds on, the net will expand to the export rigs and, pure guess here, culminate in a monumental civil and criminal indictment. Most will sign consent decrees that will forfeit their left testicle if they do it again, pay their fines and lawyers, and march into the sunset. But were I the Dave of Davemade among others, I would be buying roadmaps of the general environs of Leavenworth KS for potential visitors. Crucifixions, remember. Users don't have a lot to fear, builders and dealers most certainly do. Taller nails are hammered first.

You can only ignore the authorities so long and so far.

Hollingsworth thinks he knows why a few hams--who
already have extensive spectrum privileges--are drawn
to the 11 meter newsgroup. "I think they feel they can do
what they want to, whether it's to cut up or play," he said
this week. In addition, Technicians lacking HF privileges
may be attempting to skirt their inadequacies by resorting to
posting in the 11 meter newsgroup instead of taking the
Morse code test and getting a life. They then re-direct their
inferior feelings to a self-dilusional dislike for the peron/people
whom they actually admire and want to emulate.

Hi Capn,

I run HF mobile also. If I don't happen to have my CB in the vehicle,
I listen (not talk) on 19 a lot on my Icom 706. The truckers have a
lot of comments to make about my 3" dia screwdriver. Some are very
amusing if not hilarious. For example, one day while on the Interstate,
there were 2 of them hanging back discussing this "monster" antenna on
the "little" station wagon ahead. You know, "he could talk to the moon"
and "I wish I had an 'antenner' like 'at on my truck" etc. Just to see
what would happen, I pressed the switch and started the loading coil
moving up out of the lower mast. One of them remarked, "LOOK! The damn
thang's a-growin'." I laughed SO hard! Best laugh of the day. I've even
had them to call me by my callsign on the car. If I have the legal rig
in the car, I'll answer and tell them what the "big" antenna is for. If
not, well, I just keep on diggin'.

ROFL - mutually exclusive! You don't take a Morse test if you've
got a life!

> They then re-direct their inferior feelings to a self-dilusional (sic)
> dislike for the peron/people (sic) whom (sic) they actually admire
> and want to emulate.
LMFAO! Don't kid yourself, bucko!

Freeband happens because enough people believe that there's no reason
why it shouldn't happen. Any laws that are held in such disregard need
amending. Or you could just say "No, we don't like it", bury your heads
in the sand, and try and make a "prohibition" work. Like we have so
much success with drugs!

Supply and demand, it's quite simple. The desire to control other
people, it's quite straight forwardly a problem.

Thankfully I don't do drugs OR freebanding - but if I wanted to I'd
be real cheesed off!

Glorioski Meg, rehab programs DO work after all. Pretty much agree.

Many years ago, the wives on our repeater system pointed out that their partners in crime, other wives, could pick up the mike and tell the OM to bring home bread and milk. Quoting Part 97 (the amateur rules) to them for some reason didn't cut it. So we invented Sally and gave her a real honest call sign (actually mine before I got my old 1954 callsign back) and Sally showed up on the repeater. So what if she had six voices -- maybe she got a cold in the last 15 minutes. Weren't no way she was going to take the 5wpm the Tech needed in those days.

Rules are meant to be tactfully disregarded, the key word is tactfully. The Commission in days of yore were a generally sane bunch and even had they known I doubt if much would have come of it because it was pretty tactful.

The CB rules were written by a bunch of summer interns and almost invited violation. When enforcement came to a halt (actually never got moving at

all) the race was on.

There is no doubt in my mind that the FCC is groping for a workable solution to the bootlegging problem, probably partially at the request of other governments. I expect a few public crucifixions, partially because understaffed enforcement does them and partially to deliver a few heads on platters to the grousing governments. You guys serve a mean Stilton, Meg, and no good bureaucrat wants to miss out on the hospitality at Geneva. :-) or HI as serves your fancy.

The reading of Parts 95 and 97 or the Riot Act for that matter has about the same chance of having an effect on bootleggers as it had on the wives.

Dick

> because of YOU?

The solution starts with the first person, and proceeds one person at a time from there. YOU have to decide if you want to be a part of the solution, or sit on the side lines doing nothing.

> I know that there's a lot of illegal activity going on
> just like everybody else knows it, BUT there ain't a durned thing I can
> do about it.

If you applied that logic to all criminal behavior there would be no need for police, or laws. The guy with the biggest club, or gun, can take whatever he wants from you, or anyone else.

The logic that states "since nothing can be done ..." is no excuse to do nothing. Yes we can never completely eliminate criminal activity, BUT with active enforcement we can reduce it to a small level. That is what needs to be done on 11m.

> We already KNOW what ole Riley's doing or not doing, so
> posting this stuff ain't helping a thing.

I think it does. It shows that at least ONE person is not going to be chased off by the thugs on this news group. I have posted these same views here before, in the past, and have experienced the same sort of child-like-behavior from other posters who like the chaos to continue. If I can convince only one CBer to operate legally, it is worth the effort.

> All it does is create a long
> thread of flames which you ENJOY reading.

The flames don't bother me. The part I do enjoy is the slow realization on the flamer's part that I don't care what they post about me.

> Instead of complaining about
> the stuff on 11 meters, how about monitoring 28.085 and snitch on the
> bootleggers up there?

I do. However I would much rather cut the problem off at the source.

> Yes, I did make a mistake on the 1500 watt rule on VHF. I make mistakes
> sometimes, OK?

People make mistakes all the time, that's means we are only human.

> Since I don't USE 1500 watts on any band, I never spent
> much time thinking about it. I CAN, but I doubt I'll ever own a high-
> powered amp or run such power. I do fine with 500 or less on 80-15 me-
> ters. Mostly less.

Yup, if the band is open you don't need much power. If it is closed, running a megawatt will not do any good. Most Hams don't run more than 100 watts, and many run even less, and do just fine.

> Since your Don Quixote methods (jousting at shadows and tilting at wind-
> mills) isn't working, why don't you chill out?

It looks more like you have just given up. But just because you have does not mean I have to.

I`ve got a couple of leads I`m working on now. Someone suggested a shop in Circleville, Oh. and ask for Rooster.
A shop that is in Wv. told me to try new tubes and if that doesn`t do it bring it over and they will try to fix it or buy it from me. They don`t have the 250`s, only larger tubes. I have done business with them before and they treated me good.
I`m trying to run down a person who is still working on radios I`ve been told. He owned a shop 3 blocks from where I grew up. He goes by Camel Jockey. I used to hang out in the shop. I haven`t seen him for quite a few years. He can probably help.
I`ll let you know if I can locate someone who can fix this thing.
Take care 302

news:3A00B575.2309@bellsouth.net...
> Mr. Scott,
>
> Do YOU run SSB on 2 meters and 440?

As a matter of fact I do, as well as on 6m. I run all modes, on all three bands, both mobile and base. I have a Yaesu FT-847 for my base rig, which I am trying to get active on the satellites too, and I run an Icom IC-706MKIIG mobile. You can check the spec's for the rigs yourself on the Yaesu and Icom web sites.

I replaced the crappy filters in the FT-847 with a InRad crystal filter for SSB receive, $150, and the transmit filter with a Collins filter, $130. So between the rig and the filters I spent nearly $1800 on the radio. I built my own antennas for 2m, and 6m SSB operation. For FM I use a high gain mobile whip antenna. Since I live in an apartment I can't use large antennas, so operating is a little more "interesting".

The Icom IC-706MKIIG has the SSB crystal filter, and the +/- 0.5 PPM high stability reference oscillator installed in it. I need the high stablity oscillator to keep the rig from drifting too much, on SSB, from temperature changes since it is used mobile. So between those two I have about $1250 in that radio.

I am also in the process of installing, in my mobile, two Mirage brick amplifiers, 25 watts in -160 watts out on 2m all mode, and 10 watts in - 100 watts out on 70 cm all mode. I got a good deal on the amplifiers used at local Hamfests. Each amplifier new cost about $300 to $380 each, and I paid about half that used.

I also have a MFJ 1278 multimode TNC I have to get connected to my FT-847 some day. It's not doing me any good sitting in the box right now.

If you want to know my background just look me up on the QRZ, and Buckmaster web sites.

>
>Do you remember the Kraco SSB Base station, c.1978? A very nice unit!

I have one, the KCB-2355 "SSB DeLuxe". It looked cool back in its day, but was really a mediocre performer. The one I have has a big problem with crystals, ie, most of them are bad! That was a common ailment with many of the low-end CB rigs of the 1970s. I have some rather aggressive plans for my KCB-2355. I'm going to yank out the crystal switch and most of the crystals, and install a VFO in place of the switch, and convert the thing into a VFO-controlled 10m rig! I may also modify the AM mode to work CW.

>Whatever did happen to the Kraco company?

They just sorta faded away in the early 1990s. At one time, they were selling a huge line of CB radios, car stereos, and automotive accessories, and they even sponsored Indy and NASCAR race teams. I haven't heard a peep from them in many years.

Someone else suggested that they were part of K-Mart Corp, which is not true. Kraco was an independent company.

the ft847 is a decent rig but doesnt perform as well as a dedicated hf radio would or a dedicated vhf and uhf but you wouldnt know about the HF part. too many compromises. i've read to many so-so reviews on this radio and the cb'ers i have talked to running them said theyve been more impressed with other radios that were a lot less money. dont think i would want to spend 1800 for so-so performance and then come onto this newsgroup and stick my chest out for it. the ic706 is a pretty good radio though for a mobile and the fact its icom. there getting better these days then they were in the past.

Subject: Bell 4

A fireman came from work one day and told his wife, "You know, we
have a wonderful system at the fire station.
Bell 1 rings and we all put on our jackets. Bell 2 rings and we
all slide down the pole. Bell 3 rings and we're ready to go on the
trucks."
"From now on," he said, "we're going to run this house the same
way."
When I say Bell 1, I want you to strip naked. When I say Bell 2, I
want you to jump into bed. When I say Bell 3, we're going to make love
all night.
The next night the fireman came home from work and yelled, "Bell
1!" and his wife took off her clothes. "Bell 2!" and his wife jumped
into bed.
Bell 3!" and they began to make love.
After two minutes his wife yelled, "Bell 4!" "What's this Bell 4?"
the husband asks.
"More hose," she replied, "you're nowhere near the fire!"

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't
mean a THING if you ain't got that SWING!!!!!!!

Hey,

I know this is a little off topic so I'll
try to make some kind of a "connection"....

Maybe you're listening to you favorite
frequency some afternoon and out of the
blue you wonder, whatever happened to those
guys? What guys?....You remember, The Beatles!
Some stretch, huh? Well, for the radio operators
among us who favor the "Fab Fours" musical talent,
the web site will be live on November 13. Here are
a few links below for the interested.

http://www.beatles.com/
http://www.worldnetdaily.com/page2.shtml

"INTERNET NEWS"....Beatles'dot-com together'

3 remaining members of Fab 4 go online 30 years after split-up

Disclaimer:

For those of you who don't give a hoot about
the Beatles, sorry for having taken up your time.

For the rest of you, enjoy........

73,
NAO911/Jack

I was looking for an xl awhile back and ended up getting an LT. It does the same watts as my friends old XL that we tuned up. Also the receive is pretty damn good as well. If the XL is a radio that you like, then you will not be dissappointed with the LT.

The XL controls are smoother and easer to use. Both have about the same power. The noise floor on the LT is better, but not worth changing radios for.....DSC is only of value when there is on SKIP at night.....Both good radios.....Hope this is of some value to you .....

haha what a horses ass yes you would probably have to replace some parts if it doesnt work whos to say there isnt a broken wire in it , a technican diagnoses the problem he doesnt just replace parts in an effort to repair something without finding out what the problem. Unlike a maytag parts jockey as yourself . go back to hanging sheet rock you parts replacing, illiterate fool and leave the technical electronic work to the guys who have the know how .

Don't know where he is, but he does fall out with the skip. Definitely a recording, as well. Just started hearing him within the last month.

People often fight for a cause they believe in, even if it does not affect
them personally, simply because it is the right thing to do.

It is because of the illegal amplifier use on 11m that the FCC requires all amplifiers below the Ham 2m band be certified for one, along with design elements to prevent those amplifiers from being converted easily to 11m operation. You can read the specific language in Part 97.315 and 97.317 for yourself. These requirements make the conversion of these amplifiers to other legal Ham bands harder, and drives up the cost of new equipment.

It's a tongue-in-cheek joke about the pro-code group who think CW is the holy grail of Ham Radio. If you read it again you will see that the functions of the human, and the CW/rig combo, have been reversed just for the fun of it.

Hang in there Leland....you have the goods on the high-power so-called "freebanders" and down deep they know it too. No amount of word twisting is going to change the fact that freebanders and those others running high power on the legal CB bands are nothing more then criminals.
You know it , I know it and those CB guys know it too. Stick to your guns Leland.....

Cat,
'Taylor' is a 'house brand' made by Penta Lab. in China,
along with a few other 'house brands'. $49.95 is too much
for ~any~ tube made in China...

Hi. What is "skip".

Also, if you buy a new radio that is supposed to be 4 watts and have it "peaked and tuned" to a higher wattage, does that void the radio warranty?

Thanks!

Anyone have any info. on the fellow who frequents 38 LSB and goes by the handle of "Mr. Wonderful"? He claims to be in Dallas, Texas and enjoys playing music he's downloaded off the Napster site on air, as well as ranting about the "homos" for hours on end. Funny thing is,
Mr. Wonderful sounds kinda like 101 Charlie or even the infamous Frank Burns from Phoenix, Arizona, so one has to wonder if all the weirdoes on SSB aren't one in the same person.

Those body men are pretty low-tech. Won't find many on the 'net if I had
to guess.

Here's how to make some serious money:

Get in good with the tow truck maggots and you'll get a steady stream of
business.
Pay off the insurance adjusters to -bump up- claims values.
Hire non-English speaking illegal immigrants to do the work for next to
nothing.
Use cheap, second rate parts and supplies.

Then try and sleep at night.

Jeff,
I looked up the 12aq5 and they are rated for 10 watts output
per tube. That would seem to make the amplifier have a 100 watt
output. No idea what the drive would be.
I know this isn't something you want to hear, but your friend
would be smart to find a new owner for that amplifier. Aside from
the availability(?) problems he may have with those tubes, it
makes for a very good space-heater during the winter months...

doc,
read it again. thats the KEYING CIRCUIT tube.

>Jeff,
> I looked up the 12aq5 and they are rated for 10 watts output
>per tube. That would seem to make the amplifier have a 100 watt
>output. No idea what the drive would be.
> I know this isn't something you want to hear, but your friend
>would be smart to find a new owner for that amplifier. Aside from
>the availability(?) problems he may have with those tubes, it
>makes for a very good space-heater during the winter months...

Lying? Let's focus on that. When one goes for a job, a simple question is asked on many applications. "Have you ever been convicted of a crime?" Some even ask about a DUI. To openly admit it, one may stand a chance of getting the job. But lie about it, by intentionally not disclosing it and have the company find out on their own, that job is gone! Should not the president be held to at least the same standards? As i said, they both suck! KO! Round over!

That's like

"I didn't know the buddhist temple meeting was a fundraiser"
"I didn't delete emails that detailed illegal activity"
"I wasn't unlawfully in posession of FBI files"
"I didn't make illegal fundraising calls from the Whitehouse"
"I served on the front line and was under direct enemy fire"
"The medication my dog takes is less than the medication that my mother takes and they are the same medication"
"There has never been a time when I've said something I know to be untrue. There's never been a time that I've said something untrue."
"I took the initiative in creating the internet"
"I was the inspiration for the main character in the book "Love Story""
"I discovered Love Canal"

And those are just the ones I can remember off the top of my head.

If you want a whole list of them with specific details, go to "gorewillsayanything.com"

And you want to know something even better? Would people continue to do business with a doctor, lawyer, mechanic, etc. that lied to them? Why would they wan't a liar as President?

The Sil used the same 3 kc wide USB filter for AM. It only shifted the
feed through frequency by rubbering the circuit for AM. A total of
3 kc's is not enough for high fidelity AM. 6 kc is preferred. Even
with the D 104 the audio is still not the best, but only so so.

What final did he use to replace the 1969?
How much bus wire did he lay on the board to take the extra current?

I'd believe 25 watts, but no way will an LT swing 40 without some
SERIOUS modifications to the power supply, regulator, modulation
circuitry, and the board itself.

Be neat to see one actually do it, tho.

A man suspected his wife was seeing another man, so he hired the famous
Chinese detective, Chen Lee, to watch and report any activities while he was
gone. A few days later, he received this report:

Most Honorable Sir:

You leave house.
I watch house.
He come to house. I watch.
He and she leave house. I follow.
He and she go in hotel. I climb tree.
I look in window.
He kiss she. She kiss he.
He strip she. She strip he.
He play with she. She play with he.
I play with me. I fall out of tree.
I not see.

No Fee,

Chen Lee

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't
mean a THING if you ain't got that SWING!!!!!!!

Hey PEAK,

In my case, I make plenty of mistakes! LOL! I had to laugh at my-
self not too long ago. I built a new mobile antenna. I finished the
construction, and proceeded to test the thing on my car. I put my ana-
lyzer in line and the darned thing wouldn't resonate. It took about
1 minute to realize something was VERY wrong. With a coil that should
load easily on 75 meters and a 70" whip, it was taking about 1/4 of the
loading coil to load on 10 meters. HUH? I took it off, put it back
on the bench, and took it apart. Ah HA! Guess what I had done. When
I assembled the coil, winding it, etc, I failed to connect the windings
to the brass fitting at the top, rendering the whip useless! Well, I
saw it immediately. I was TOP LOADING the 3 foot mast instead of the
entire coil/whip assy.! Hmmmmmm! I wonder if it would've worked
anyway? ROFLMAO!

I heard about the DUI. I think Bush should have outed himself about that a long time ago. Due to groups like Mothers Against Drunk Driving, a DUI now is thought of a lot differently now than it was in the '70's.

I am curious as to why you and others think Gore is better. Please enlighten me.
If you can, I may change my vote....

I do not believe another member of the skull and bones club needs to be president. The Bush clan is too tied to the new world order and world globalization, which some may see as a good thing, but I do not. Even the diehard republicans realize Dubya (a "C" student at Yale) is at best, a yes man, another puppeteer to those in control. If the republicans thought for one second this man could think and act on his own, he would not be their candidate. Then we have the demos, whose candidate might has well invented the damn wheel, for all we care. There is no voting for the best candidate. Comes down to voting against someone. Unfortunately, the candidate that I would support is a third party candidate, therefore he is automatically excluded and precludes me from casting a rational vote.
One more personal note, and I can catch hell for this one, but the next president has the rare ability to stack the supreme court. Bush said he would appoint justices with the pro-life stance, which coud lead to a reversal of Roe vs. Wade. Doesn't mean I'm for or against it, but there will be blood in the streets should Roe vs. Wade be overturned.

I agree that they are puppets. Gore and Clintong are tied to the NWO and all trilateral commission and council on foreign relations and all that stuff too.

I doubt Roe vs. Wade would be overturned. If anything they would go after the partial birth abortions. It's amazing how hysterical women get about the "right" to kill their children.

Speaking of Supreme Court justices, he'll appoint radical leftist judges. What does that mean to us? Bye bye 2nd amendment. Once the 2nd amendment goes, the first and fourth are right behind it. Not to mention, the armies of the night will now feel free to take your wife, daughter, car, or tv set at will...

It isn't the manufacturer's. It is the FCC that created this restriction. Hams cannot buy a 10 meter amp. They either have to buy an amp and PROVE they are licensed, OR if it is an HF rig, have to provide PROOF of licensing to operate out of band, I.e., MARS or CAP to open up the ability of the transceiver.

If I had a fraction of the spare time you have my house would have been completed months ago!Hell,I could have even attended the function in H.S. this year.For shits and grins I had my wife listen to several ham freqs and different freqs on 27 megs including 27025.When asked if she could tell a difference she replied "they all sound more or less the same."Not to take anything away from the ham guys,the majority of cbers I know are so much more talented and educated in the ways of electronics.I know many talented hams and most are more than willing to educate me but there are a few that have a Holier than Thou attitude.
It is illegal to run power on cb but it can be done cleanly if done properly.I can run 1500 watts on my base and not bleed on my neighbors and my kids can still watch tv!Im looking out the window right now and a guy just j walked across a busy intersection which is illegal.Very dangerous to himself and others.Just think what could happen!Food for thought!!Gotta go,another client just walked in.

In pharmacology, all medications have a generic name;
Tylenol is Acetaminophen, Advil is Ibuprofen, Rogaine is
Minoxodil, and so on.....
The FDA has been looking for a generic name for Viagra, and
today settled on the new name.

So when you order from now on, be sure to ask for the generic
and save money.

It is known as Mycoxafloppin.

4045. Re: Siltronix Question

Newsgroup: rec.radio.cb

Hey there,

Here's a quick follow up to this post I found. I've got a basic Siltronix
web page started at http://sonic.ucdavis.edu in the Amateur Radio Pages,
check it out and let me know what you think... It'll expand with time.
Here we go...

: Dave Hall <nojunkmail_n3cvj@worldlynx.net> wrote:
: CJ Jeff wrote:
:> I am looking for some information on a Siltronix 1011D radio . How was the
:> audio on these rigs ? How did it go from 11 to 10 meters , using just the
:> VFO or does it have a switch ? The VFO , marked with channels or just the
:> frequencies ? Just curious if you can get to the freqs. between 11 & 10 .
:> Any other input /help would be greatly appreciated , Thank You
:>

First, lets do a follow up to the first questions:

The audio on the Siltronix was excellent, both receive and transmit. It
went from stock 10 meter transmit down to the 11 meter band in receive
only mode with a two position front panel bandswitch. The vfo convered
large ~500KHz portions of each band position. The vfo dial is marked with
both frequency and cb channel positions. The 1011c was vintage 23 channel
and the 1011d had the channels up through 40 on the front panel. The
frequency coverage was similar for both radios. The "holes" between every
4th channel are the original remote control device (model airplanes and
similar) frequencies. Yes, the Siltronix would cover the hole channels
with no problems. check out my web page if you haven't been there. See
the url at the top.

OK, that's the first part... Now lets clear up some of Dave's post.

: An oldie, if not a classic radio. Another example of a "ham" radio, that
: was really intended for the freeband market. It had 11 meters in it for
: "receive" only, however an easy mod allowed transmit as well. Had the CB
: channels marked (at least the first 23). This radio was "interesting" to
: operate to say the least. If you were a hard core SSB user, the radio

It was actually intended as a swan type ham radio for cb'ers and hams. You
would have had to ask Herb Johnson (rip) what the original intention was,
but he past away last year.
A little history about the 1011 series is on my web page. The vfo front
panel is also mentioned. Mostly the front panel shows the time era for
each version, frequency wise. Most all the knobs and locations stayed the
same.

: worked fairly well. Audio quality was good and it would do 100-120 watts
: out.

For the technology of the time, the radio was a real work horse and a solid preformer. Depending on the model, the radio would output about 35 or 40 watts (in proper operation) AM Carrier and 120 watts pep sideband.

A one sweep tube final was the order of the day. Worked real well...

: Now for the bad news. The rig drifted quite a bit, especially if
: the band switch was dirty.

The radio has a very standard drift path for that type of rig. Cold start to full warm up on a clean radio was a few KHz at most. Some of the newer solid state export stuff is about the same. If you didn't keep the radio clean, the bandswitch contacts would oxidate (as most radios of similar construction do) and the stability would get worse. Care and cleaning is mentioned on my Siltronix web page. You have to remember that compared to the monsters of the decades before this radio was made... the siltronix was almost rock solid. Those of us in the know would often place reverse temp caps in the rig to reduce any drift to <1KHz. A lot of newer radios don't do that well...

: A freq. counter is a must when using one of
: these radios. Many people that had them, used to keep them powered 24/7
: to minimize the drift (which was unacceptable for SSB use). The rig has

I and thousands of others used a 1011c for years without a counter. It's a great radio that works well, even a few minutes from cold start (in an average temp household). A few khz worse case Drift wasn't a problem when spread over a few hours. My rigs drifted less than 2khz when set up an kept clean. Most of the warmup required was for the final and driver tube to become really temp stable. Most RCA tube hand books say the average tube is up to operating temp in about 11 seconds. So in 15 seconds, you could transmit if you wanted to. Just not a great idea... mostly time allowed the power tubes to physically settle in.

Yes, many people did keep them on 24/7, which I don't like or feel was proper. Based on my many years of using Siltronix rigs (all models) (and Swans on Amateur Bands), one could operate the rig quite well and stable after a few minutes of warm up. Again, see my web page for more about that part. Leaving the rig on 24/7 let's it be inline for power surges and reduced tube life. Not my kettle of tea thank you.

I don't agree with your "not for ssb use" statement. The rig was an excellent ssb preformer. Because the circuit included a conventional design using a real crystal filter, the receive window was "very tight" a desired feature... Drift was quite slow and not a much as you portray in your post. A person using the rig after a few minutes warmup didn't have much trouble with drift.

: an "AM" mode in it, but it's not a true AM. The receiver was still in
: SSB mode, which meaned that you had to zero-beat the other stations
: transmit carrier, to make for a clear copy.

Wrong...! The radio is a true am receiver. Because of the tight 3.1KHz crystal filter in the circuit, the radio had a narrow receive window to incomming am signals. This is where you noticed that early cb radios were all over the place frequency wise, you had to tune them in. If one were listening to a conversation between two other operators that were on the same channel, you'd have to sit there and tune the guy who was 1.2KHz low in frequency... then move up to hear the guy 1.2KHz high because they would be on each side of the narrow receive window. Remember a cb channel is 10KHz wide and the radios are supposed to transmit in the center. That hardly happens... both then and now.

It's a common cb receiver that has a wide window that wouldn't care about such poor transmit frequency placement, but the siltronix does. You were working against their problems, not one on the siltronix side. Ham radios provide extra slots for additional filters. This allows one to choose their own prefered selectivity. Many CB'ers had never seen this tight of a receiver up close before the siltronix.

The spot button was a common ham radio type "zero beat" feature that allowed one to zero beat into the received signal's carrier frequency. One normally didn't operate with it on. It was a nice feature, not the way the circuit operated.

Again, it was an excellent preformer for ssb and the tight am receive bandwith made it very useful for operation in crowded places. Like most radios, one had to know what they were listening to. For casual many person chit chat in a rural area, a regular cb would have been more practical. This radio was the sports car rig of the cb bands unless you were running a full blown ham rig converted down.

: AM transmit was equally
: poor. It was still in SSB mode, except for a deliberate unbalance of the
: carrier balance circuit, which gave it a carrier for AM. It was very

Am transmit was great. The rig in proper operation would output about 35 watts am carrier and the modulation was clear. Yes, you could crank up the power, but the sweep tube final took more abuse and you didn't want to replace it sooner than you had to. Run it clean and the way it was suposed to be operated as described in the manual.

Your description of "still in the ssb mode" is goofy. The circuit is a common balance modulator type circuit still used in new solid state radios. The method of unbalencing the circuit is a long used common way to generate am. No rocket science here... any ARRL Handbook describes the operation in detail. Late production rigs actually had a 1496 chip in the modulator. That's the exact same chip found in many solid state cb rigs.

: easy to over drive the carrier, and the audio would mush up like an SSB
: signal if the audio were overdriven. It was definitely not a good rig
: for AM, especially if you're a fan of loud audio.
: Dave
: "Sandbagger"

The owners manual describes proper setup and operation on am. It worked well, most often the operator go greedy and set the knobs a little higher which was a big mistake. Greedy operators often followed with a golden screw driver. I did my share of repairs from the golden screw driver types.

No, the radio does not provide modulation limiting, you had to learn how to do it right. The modulation on am contained no compression which is something lost in todays hosed up - over driven audio circuits. One had to learn how to set up the radio mic for standard natural audio. When it was done right... it was sweet and loud.

As described on my web page, I built a simple compressor circuit to bring up the average level of audio before going into the rig. This makes the radio sound louder on am. Two much audio is easy to do and you sound like crap, the right amount shows others you know how to run the radio properly and it sounds good.

In ssb, compression or limited audio is not really desired when the radio is operated as described in the owners manual. In ham radio, over compressed audio is often refered to as "contest operator audio." The groups I chat with, will often rag on you till you kick your processed ssb audio off and go back to normal.

I hope to have an owners manual available on my web page soon, free for down load. Feel free to send me pictures of your siltronix equipment. I'll post what comes in and give you credit as the source.

If you have repair questions, let me know. I'll be happy to answer what I can, as time allows.

cheers

THE CONTEST

The National Poetry Contest had come down to two finalists,
a Yale graduate and a cowboy from Wyoming. They were given a
word, then allowed two minutes to study that word and come up
with a poem that contained it, and the word they were given was
"Timbuktu."
The first to recite his poem was the Yale graduate.
He stepped up to the microphone and said,

"Slowly 'cross the desert sand
Trekked a lonely caravan
Men on camels, two by two
Destination: Timbuktu."

The crowd went crazy! No way could anyone top the Yale
graduate, but the cowboy calmly made his way to the microphone
and began his poem:

"Me and Tim a-huntin' went
Met three whores in a pop-up tent
They was three, and we was two
So I bucked one, and Timbuktu."

I don't agree with your assessment that the "AM transmit was great"
The popular opinion about the sound of a Sils AM signal is known to be
somewhat muffled or low in fidelity. Even when run properly at low
modulation levels it is less than great. You have the right to your
opinion, however most people would not prefer the audio of a Sil to
that of a Cobra.

Richard,

I think I posted on here that I said "I would pay for any damages that I might have done."
I think I told you "I trusted you with my money. How about sending my money back and I will give the amp back and pay for anything I might have done and you can sell it to someone else."
I had also told you that I took the cover off of my radio and turned the deadkey down so I could not make any mistakes.
I also took the amp out of the ckt after it would not develope more than 145 watts on high and installed a solid state amp and it worked, then a tube amp, and these both worked fine.
I also told you I wasn`t happy and that if we could get this resolved I would keep my mouth shut. That obviously didn`t happen.
You did tell me you have sent me more tubes to try and I told you I will even send them back to you if the amp doesn`t work. How do I know the tubes you are sending me are good ?? Would the average person tell you that he would send the good tubes back if the amp doesn`t work ?? I don`t think I`m being the bad guy here.
I have a lead on a guy in Ohio that can possibly fix this amp if it is not the tubes that need replaced. I WILL POST THE RESULTS OF THAT WHEN I GET THEM. EVEN IF I SCREWED THE AMP UP.
I am not afraid to tell these people I forked up the amp, if in fact I did. The real problem is that it did not work correctly when I got it. I can`t tell if I did anything wrong or not !!!!!!!!
With a 1 1/2 to 2 watt drive and all connections made properly the thing should work !!!!!!!!?????
Even if and when this amp ever developes 600 to 700 watt deadkey like it should I would be embarrassed to sell it.
Meanwhile, back at the
ranch.....

I appologize for all this folks. My intentions are not to do anyone any harm. I just don`t like to buy excellent condition stuff and open the box and mutter to myself.
"What the fuck is this ???" Then hook it up and it doesn`t work. What would you do ???? Back in my younger days this would have been a real problem.

If/when I get this fixed I will tell everyone about it. I know, you can`t wait.
Take care
Mr. Culp aka Randy

How about Dubya?

Ted Williams, the baseball great, has endorsed the Bush campaign. Sad for Ted, he doesn't realize that when Bush sticks his finger to his nose, it is not a bunt signal.

A woman was fined thousands of dollars after forging documents that enabled her to get into Yale. Apparently, the poor lass learned an expensive lesson. Only those with the last name of Bush can buy diplomas from Yale.

The new cb? After you purchase it and get it home, the first thing it does is distort your modulation. This resorts to everyone asking, "What'd he say?" When you attempt to correct the problem, it is designed to deliver a lethal, electric shock, rendering the user "quite dead", so that he may no longer err, since the radio is designed to accept no blame for "faulty stuff".
When talking DX, it automatically shuts off when reaching areas in the far east, such as Pakistan, for it "fails to recognize" many locales. The memory scan buttons are generally scrambled and in no coherent order. Closer examination reveals a white, powdery residue used for contacts and connections. The radio does have it's good point. Since the price of the radio is in the top two percent of expensive radios, there is no tax due on it. The radio? President Dubya!

John
The 2312 has a slightly higher SOA than the 1969 and in a uniden
clone chassis (superstar, galaxy, president, cobra) 50ma bias will be
fine, be sure to check on an oscilliscope for waveform purity and if
you can, on a distortion analyser adjust the bias to get all spurious
emissions 50db down on a dead key.

Aaron,
'Skip' is a property of how radio waves travel. If you would imagine a long room with a mirror for a ceiling, and you stand at one end of the room with a flashlight. If you shine the flashlight at a point on the ceiling (mirror), the light will reflect on to a spot on the floor. This reflection is sort of like 'skip'. A radio wave bounces off of the ionosphere and comes back to earth, that's one 'skip'. If you would imagine the floor being a mirror too, you can see how you could get multiple 'skips' or reflections...
Make any sense?

And yes, it will void the warranty.
'Doc

Preesi,
I've never seen it specifically prohibited, so I would
say you can do 'phone-patching' until someone complains,
and the FCC makes a ruling about it. With the number of
cell phones around, and the coverage they have, who'd
want to do one though?
'Doc

I don't remember the wording in the rules (don't read 'em too often ;)
but I do recall seeing something about phone patching and it *IS*
allowed with certain conditions. I think it has to be manually patched
not like what's on repeaters etc.

If you knew anything about Leland you would know that he is here in
this newsgroup for one main purpose. To flame the group.

Hinting at publishing his number is nothing in comparison.

Here is a quote from Leland himself........
"Well I don't, but I do come down here to read the silly posts and get
a good laugh. Reading the posts on this news group is more funny than
many of the comic strips in the local news paper. CB isn't called the
"Children's Band" for nothing you know."

> > your door.

If it is perfect, you can actually advertise that amp
as a 600 peak watt unit. In other words, you'll pro-
bably sell it quicker saying it is a 600 peak watt unit
than you will saying it does 300 to 350 watts--because
it really doesn't do that. On AM the average power is
supposed to 25% of the peak. If the unit really makes
600 peak watts, the average is going to be 150.

The Taylor tubes work fine in the 2100Bs.

The big deal with the 2100Bs is excess gain.
As far as RF Parts is concerned, the Svetlana
and Cetron 572s that they sell have enough
gain (amplification) that they (RF Parts) think
that that there may be a problem.

The bottom line is that a pair of Taylor 572Bs
will work just fine in your 2100B.

Well all depends what province you are trying to enter. each province has in a figure of speech Different laws. If you have ham gear and you don't have a valid ham licence, It all depends on the province you are entering. Some are way more strict then the others. I travel between BC and the states often. but I do have ham licence plates, they don't bother with the radios. radar detectors. I think manitoba and another province don't allow it. Last time we went thru back to canada. the US customs stopped us. did a search cause they thought we were bringing drugs. their search was peeking in the windows. If you don't ahve drugs. all should be fine. but I ain't no customs. things change.

Does anyone know how to get the midland 70-290 into the higher freqs. I looked on the Internet and those modafications do not seem to work. It was just bought last month.

4096. Do some of these electronic parts "wear out"?

Newsgroup: rec.radio.cb
Date: 2000-11-03 04:16:21 UTC
From: Aaron Mooney <aamooney@vt.edu>
Message-ID: <8ttdv4$4bs$1@solaris.cc.vt.edu>
Source record: 57956

Hi.

I notice several posts regarding new tubes and the amount of "key time" on a radio. Are there parts that actually "wear out" on a radio? I thought electronic
stuff didn't "wear out" like mechanical stuff does.

Thanks!

4097. Re: Do some of these electronic parts "wear out"?

Aaron,
In the way you're thinking of, most electronic parts do
not wear out. Mechanical parts such as volume controls, or
switches can certainly wear out. Tubes, sort of wear out,
they get 'weak', or 'gassy', and their output goes down, they
aren't as efficient as they were to start with. Transistors
actually do 'wear out', but it's very, very quick. It has to
do with how they are constructed, in layers, and the flow of
electrons through the layers deplete that particular layer,
leaving a 'hole'. Don't think in terms of seconds, but in
microseconds, which in the 'real world' means 'pop', and it's
gone.
'Doc

You know that, I know that. The Federal DA may or may not know that. The object is to perform a public crucifixion or two or three. If he gets 27 cents a year off the name it is an offense itself, certainly a conspiracy to violate, and more than likely meets the RICO standard or comes close enough to bankrupt him paying his lawyers. This is not precision surgery, this is a rip-tear search-and-destroy mission. By being the tallest nail, the BMFH will get him first.

Cross-posted to: rec.radio.cb,rec.radio.swap

I have a Realistic TRC-212 (21-1662) for sale. This is the full size
40 channel unit with carrying case. High/low TX power switch. Around
5 watts output on high. LCD display with TX and receive meters.
Great shape. Original long (around 5 feet) center loaded antenna. Has
external antenna, power and charging connections. Has an 5-pin
external mic connector as well. Requires 8 'AA's or 10 'AA's
rechargeables and you can recharge the batteries WITHOUT taking the
batteries out.

Asking only $ 45.00 (US$) INCLUDING shipping from Canada
Great deal ! ! !!
A Picture can be e-mailed.

hi all, a friend has a 10 tube phantom amp with a 12aq5 tube keying circuit and would like to know the following.

1. switch on rear labelled "BL" what is this for?
2. how many watts should this amp do on AM
3. how many watts to drive this amp.

also is there anyone out there who has a schematic for this amp?

thanks in advance.

Jeff

yours may be different but I remember the phantom as being a 12 tube
amp....4 driving 8.... all 6LQ6's (one mean machine) I don't
remember a switch on the back.... perhaps someone has put a receive amp
in it (bilateral) and thats what the BL stands for.

how would you like to retube that baby at todays prices.....shudder!...

Source record: 58014

I do wish that Mr. Culp would have been kind enough to post my side of the story....as well as advised that I have agreed to do most anything "within reason" to the amp repaired to his satisfaction!!

Before selling the amp to Mr. Culp, I had the amp in the shop on two occassions as well as replaced the tubes...at a total cost of almost $400-I do not sell junk and I had no intentions of doing so--the amp worked great when it left here....

After discussing this matter with Mr. Culp I have agreed to 1) send him another set of tubes in case the first set were damaged in shipment 2)work with him to get the amp up to par (I am NOT a tech-so I have to reply on others skills in this area)

But Mr Culp did say in all his commuications that he "would pay for any damages that HE MAY HAVE CAUSED"....which leads me to believe that he 'may' have over driven the unit which can cause the tubes to short out and possibly can burn the transformer out too.

I have sold a lot of equipment as well as a lot of tubes over the years, and I NEVER have sold ANYTHING intentionally being 'junk' and I have always stood behind my sales...I resonded to Mr. Culp's Emails IMMEDIATELY and am working to satisfy his concerns as to the operation of this purchase...

Regarding all other comments regarding this post~~> the gentleman that was commenting about buying a bad 8 pill~~>was NOT talking about me as I never have owner nor sold an 8 pill.

Thank you for reading my side of this matter.

Just wanted to let anyone know that is interested in a new President radio, Palco Electronics is going to have a big sale on them next week. Palco Electronics has a web page and you can call in now to find out what the prices are going to be. The web address is www.palcoelectronics.com
I do not work for Palco but they have given me very good service in the past and all merchandise is brand new. NOT factory refurbished. Service manuals are also available on all the new line of President radios. Just thought I would mention this to anyone who wants to get the jump on the sale.

Mike

4138. help converting mobile phone antenna to cb

Newsgroup: rec.radio.cb
Date: 2000-11-04 00:00:00 UTC
From: JB <jb3320@worldnet.att.net>
Message-ID: <3A0404BB.A127461E@worldnet.att.net>
Source record: 58050

I have a glass mounted Mobile phone antenna and currently use a handheld portable cell-phone. So the antenna on the car is currently doing nothing. I would like to utilize the mounting because it's clean , and hook up my Cobra CB to it. the first thing I notice is incompatibility of the connector . The CB having a larger screw-on than the mobile phone. That may be solvable with radio shack parts. My biggest concern is impedance loading. How does the two antenna compare and how do you recommend I deal with it. Thanks for your help.

Please don't do this! Thru the glass mounting is a waste of time for cb's.
Do yourself a favor and get a dedicated cb antenna, preferrably one hard
mounted to the metal on the car, or a magnet mount Wilson 1000 or 5000.

4152. Re: Need-Schematic & Manual on Uniden Grant XL/ and Tech Information

Newsgroup: rec.radio.cb
Date: 2000-11-04 00:00:00 UTC
From: sideband <sideband@cac.net>
Message-ID: <dr880t4t1fehndts5lishulk661l19t99p@4ax.com>
Source record: 58064

The schematics for the 148 and the Grant are nearly identical, with a minor part substitution here and there. The board layouts are different. All it would take would be for your to locate the parts.

When you say it quit transmitting, what do you mean? Does the radio go into transmit mode (the LED change from red to green) but no signal? Or doesn't the LED even change? Does the radio transmit on LSB or USB, but not AM? What?

Let us know... maybe we can help.

-SSB

On or about Sat, 04 Nov 2000 04:08:37 GMT, TLNixon@home.com (Terry Nixon), using the forum rec.radio.cb did say:

:Does anyone know if there is a service manual available for the above?
:
:I have a copy of Sams # 249 with the manual on a Cobra 148 GTL, but
:this board is slightly different. Sure makes it difficult to
:troubleshoot without the proper manual!!
:
:This radio suddenly quit transmitting . As of right now, I have not
:been able to figure out why. Voltage regulator is OK, and predriver,
:driver and final seem okay. Normally I would not invest this amount
:of time and effort in a rig, but it belongs to a close friend and it
:has become sort of an obsession to fix it!!

DO NOT use a tru the glass antenna. You might as well take a wire and wrap it around the PL-259 connector on the back of your radio. I myself use the Wilson 1000 with very good luck. Even if you do not have a big strapper for a radio the antenna is what makes the rig at least 80% better.

Greetings!

You should use the paragraph below to notify users, for I have heard the results of using the Ceramic versus the standard Dynamic elements...

There is a tremendous difference in fidelity - although tinner, the overall filtering narrows down the tonal response to a very likeable tone that is comparable to some better desk mikes, like the Turner +3 with compression on.

Sure there is some distortion due to the bandwidth and filtering, but overall a lot more intelligible than many "atypical" radios using bassy, overdriven - power mikes.

Sound is comparable to a M576 Astatic.

I wouldn't go too hard on an older Silly-tronics, getting one to work well does take a lot of effort on the operator.

Now, if we can keep the operators out of the ETOH and the radio at the same time, we may have something...;-?

On 4 Nov 2000 00:19:11 GMT, while the modem was pondering it's navel, Skipp <skipp@pilot.ucdavis.edu> dissertated the following:

>: tnom@mucks.net wrote:

Clearance Special.
Trucker 450 Power amplifier
Manufactured by the Messenger people.

Features: Qty 4, Thompson SD-1446 Power Transistors.
High/Low Power selector switch, Class C power amplifier.
Receiver Pre-amplifier. Should not be used with SSB.
Good for AM/FM operation. Requires 35~40 Amps Peak
at 13.8VDC for proper operation. Average current 24~28 Amps
on High power level with a input carrier power of 4 watts.

All sales are final.
Units are bench tested before shipment.
$175.00 DOA Warranty.
$200.00 90 Day repair Limited Warranty.
Will not cover overdrive, or misuse.

Prices do not include Shipping and Handling.
Purchase three or more on one order,
and shipping is FREE!

Hello Tim: Great web site!!!!!!

Sounds like grass roots type CB story.

I started out with a old Gonset G-12 tube rig, 102 inch whip antenna, and a car battery on the bedroom floor. The battery acid ate thru the carpet. But I had a great time listing in on all the other stations. One guy comes to mind "Rebel" he was on channel 5 in the San Fernando Valley, and talked all over the world, had Johnson Viking Ranger II, and a Gizmotchie 5 element beam antenna. And this was back in 1966.

Then in the 1970's CB became real popular. We had CB Breaks had door prizes, raffled off big radios, linears, and Moonraker Beam Antennas. Even the old fart hams started to show up and have a few drinks and get sociable. And many hams got cb radios so that they could join in the fun.

Great web site, keep it up.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

u r all very funny, but totally mssing my point. let's say i am looking at a msg. then people repond to that msg, and i want to read their responses. i have to scroll all the way back to find the original msg in oder to see the responses, or if it is relisted, same story. vice-versa, if i list an item for sale, the odds of people wanting to scroll thru all the old msgs to see it r small compared to if it is showing up as a new msg. if i were looking for something, i wouldn't want to go back thru all those msgs to find it, i'd rather look at new postings. in fac, i set my server to delete msgs over 10 days old so i don't have to see all the old stuff. is that so hard to understand?

>

well it does tie into cb twist, and i can't help it if numb nutts rich doesn't know it. heck this guy prince is a big time cb radio operator when he isn't pursuing his other hobbies whatever they are. i was wondering why i haven't heard him on the radio for a while. well what do you know. he is in deep do do. the word is this. al gore our wonderful democratic presidential candidate, made an appearance in houston in march of this year and talked at a black church somewhere. well old prince being the nice guy that he is and knowing how these assholes do business, lined up a meet with the veep at the church and they struck up a deal. prince offered to pay al gore $1,000,000 in cash if he would assist him in his efforts to shake the dea and houston narco units off of his tail. seems they have the goods on him and were going to present evidence to the grand jury under the drug kingpin statute. well you know what. old al gore accepted the money . and he told the dea through whatever contacts he had to lay off of prince on this thing. the only question i have is where is that damn money and what happened it, hmmmmmmm?????? . a search of campaign records produced no trace of it . so where is it???? the fact that al gore accepted this bribe is certainly no surprise to me. but i guess i am continually bamboozled by the lack of good press coverage on things like this. the only reason it started making waves is that the dea and hpd are raising hell about it and our wonderful attorney general bulldike reno, has finally relented and started a so called investigation. heck give me a break . she couldn't investigate shit for shit. but what are we going to hear about this weekend? certainly not this. what we hear is a lot of talk about some silly drunk driving arrest in maine some twenty five years ago. oh please, beam me up scotty. this is just too much. so cb radio and politics do come together sometimes. i wonder if prince is going to sell some of that cb radio stuff to help pay his bills. i might be interested in his big box. he won't need them while he is in cooler at leavenworth. heck i think prince and al gore should have adjoining cells and they can work on new rap songs for al gore's new cd, 'al gore paradise'. anyways this is your cb radio reporter working the beat, somewheres waaayyyyyyy down south, cd is back quiet.....

4175. Re: Do some of these electronic parts "wear out"?

Newsgroup: rec.radio.cb
Date: 2000-11-04 00:00:00 UTC
From: jamesrhampton@my-deja.com
Message-ID: <8u1nah$p5c$1@nnrp1.deja.com>
Source record: 58087

Yes, electronic stuff does 'wear out'. There are many forms of this, but take a look at your computer. The heating/cooling cycling that occurs when we turn our 'puters on and off causes mechanical expansion/contraction on the integrated circuits. This stresses the interconnecting wires which attach to the ics (and then are brought out of the package to whatever will make contact with the circuit board or socket the IC fits into. Also, when the gear is running, electrical charges exist across very tiny dimensions. Consider your automobile bumper. Chrome. Electroplating. Yes, atoms and molocules will move (very slowly over a long period of time) and can ultimately short across connectors, causing improper operation. I have seen designs using underrated parts. One particular electronic organ used a 400 volt diode in a 150 volt supply - consider that diode had to withstand the 150 volts plus the peak ac voltage - it was normally exposed to voltages a bit over 300 volts. All you needed was a good power surge and .... I warned a couple of organists here in Rochester. One took my advice and I replaced the 400 volt 1/2 amp diode with one rated at 1000 volts 1.5 amps. The other did not take the advice. About 2 years later we had an electrical storm and she was playing a professional job. Yup, the diode shorted - and destroyed her transformer in the process! I don't recall what the transformer cost, but it was $85.00 just for the air freight to fly another transformer in. Yes, then we put in the 1000 volt diode ...

73s from Rochester, NY

Don't surprise me none. Gore has an affluent touch at keeping things quiet, but so do the Bushmen. Maybe the 'ol prince of a guy won't do any time at all, then we'll know where that million went. One thing I can tell ya', word from other folks close to the demos in Washington Dee Cee is that IF Gore loses, him and Clinton have a plan to burn one in the rose garden before vacating the Pennsylvania avenue premises, just so they can say they did it. You won't catch THAT one in the news either. Then again, maybe you will, I heard about it. Then the Bushmen can commence a frattin'!

Source record: 58095

Thats a mitsubishi transistor. It isn't listed on the web site or their data book. Closest bet is the 2sc1969. Limited info I have from a japanese manual is the following:
Ic : 6A Icbo(uA):500 hfe Ic(mA):100 hfe Vce(V):10
hfe:50
Pout:18.5w @ Vcc=12v, f=27mhz, Pin=1.5w

My understanding is that it's slightly beefer that the 1969...
2sc1969 : Pin=1w, Pout=16w CW, 22w PEP, Gpe=12dB, Ic=6A
2sc2312 : Pin=1.2w, Pout=20w CW, 30w PEP, Gpe=12dB, Ic=7A

Source record: 58107

A heterodyne is also known as a beat frequency. It is caused by mixing different frequencies. Any time two frequencies are mixed, you get 4 outputs: the original two and a sum and a difference. In order to simplify radio design, it is easier to have only one tunable circuit. This circuit is known as the Local Oscillator (LO) as is the basis of modern radio design.

Radio 101...

A local station broadcasts on 1090 KHz (WBAL) My radio is tuned to 1090. The LO generates a small RF signal on 1545 KHZ and is mixed with the incoming signals. This creates 4(+) signals. They are in KHZ: 1090, 1545, 2635 and 455. These signals are fed to the Intermediate Frequency (IF) amp. The IF amp is tuned to only allow the signal at 455 KHz to pass and be amplified. The other 3(+) signals are lost in the radio. The (+) signals are every other radio station that gets to the antenna. However their heterodynes are not at 455 khz with the exception of a strong signal at 2000 KHz. Why is this? This happens when you mix 2000 and 1545 KHz. The outputs from that combination are: 2000, 1545, 3545 and 455 KHz. This is known as an Image. Double and Triple Conversion can prevent this from happening.

Skip is this guy that like to talk to you only during the day. He hides and varies his power so it is really hard to pinpoint him. Sometimes he is in the far west and sometimes he is in the far east. Sometimes he speaks Spanish and other times he speaks French. That skip sure is smart cause no one has been able to catch him yet.

It appears as if the Coax Kid is no longer in business...
His web site shows he's relocating. It has been that way for months.
Anyone have any first hand knowledge?

Yo Tim...

Glad to DX witcha. I haven't held a QSO in a long while ever since the beam came down (as you could tell). I guess the homemade 5/8wave still works. Now I gotta get off my butt and stop by Jay in the Mojaves' place and purchase a real antenna. Take care Tim and hope to get better conditions back your way. 73...

Not much to know, turn em on and wait 45 seconds if they are working correct
Simple antenna tank coil tune on the side or back
I had an old Comstat 25b and a Sonar E 0r G ? (with the meter)
Make sure you mic is wired correctly
I loved how the 100 volt + Keying circuits bit and smoked mic preamps.
They were a pleasure to listen to with them crystal IF filter's, big
speakers and class A audio circuits
Ohh, I would die to have that Sonar back.
:(

I have a Texas Star DX-400 pretty much brand new, and barely used. It's in excellent condition. There are no scratches on it. The mounting bracket is included. I used it on my base station, so it hasn't had the rough life of being used as a mobile. $230 + $15 shipping in the lower 48 states only. First come, first serve.

: tnom@mucks.net wrote:
: I don't agree with your assessment that the "AM transmit was great"
: The popular opinion about the sound of a Sils AM signal is known to be
: somewhat muffled or low in fidelity. Even when run properly at low
: modulation levels it is less than great. You have the right to your
: opinion, however most people would not prefer the audio of a Sil to
: that of a Cobra.

Hi there,

Of course you can add your own thoughts in here... Lets talk about why a lot of siltronix owners had muffled audio. THE MICROPHONE..! Many people used the popular astatic 10da head or sure 444 (or equiv) low impedance microphone. That's the problem.

If you were to look at the Siltronix mic input circuit, you'd see it's a very high impedance, just like a guitar amplifier. Those mics are all pretty low z mics.

The best choice for a 1011 radio was a non powered D-104 with a crystal cartridge head on it. My personal mic is a powered unit driving a small compressor circuit set for light compression. It's a crystal clear talker.

Don't blame the rig... blame the wrong microphone.... which is also funny because Swan sold a sure type mic for the siltronix. Big mistake... bad audio.

The crisp audio of a properly run siltronix will punch right past the cobra. "That's a fact... jack!"

cheers
skipp

: Jeff <dupuisj@nortelnetworks.com> wrote:
: hi all, a friend has a 10 tube phantom amp with a 12aq5 tube keying
: circuit and would like to know the following.

Hi Jeff, I've worked on a few in my day... quite the beast isn't it..?
The common setup was 4 tubes driving six.

: 1. switch on rear labelled "BL" what is this for?

don't know... I'll have to look at one I have or the diagrams I have to
see. Doesn't ring a bell. If the front panel doesn't have a high low power
switch, it's probably for that feature.

: 2. how many watts should this amp do on AM

A phantom 500 would do an easy 500.

: 3. how many watts to drive this amp.

About 4.5 watts am carrier max.

: also is there anyone out there who has a schematic for this amp?

I don't think D&A is around anymore... Their diagrams for the 500 and 700
were the same with dotted in sections for the parts past the basic
circuit. So, most any good 6LQ6 amplifier diagram should be helpful.

The hooks in the phantom were the older original tr relay tube keying
circuit and NO BLEEDERS ON MANY OF THE HV POWER SUPPLIES! Be real careful
when working on the amplifier. I won't tell you how I found out.... :-)

The phantoms were a raw and rude amplifier, but they worked and seemed to
be solid in construction. I remember hearing many on the bands when skip
rolled through back in the late 70's.

: thanks in advance.
: Jeff

Just hope you don't have to retube the amplifier and all will be well.

cheers
skipp

Does anyone know if there is a service manual available for the above?

I have a copy of Sams # 249 with the manual on a Cobra 148 GTL, but this board is slightly different. Sure makes it difficult to troubleshoot without the proper manual!!

This radio suddenly quit transmitting . As of right now, I have not been able to figure out why. Voltage regulator is OK, and predriver, driver and final seem okay. Normally I would not invest this amount of time and effort in a rig, but it belongs to a close friend and it has become sort of an obsession to fix it!!

haha, yes your big flashing taillight.. lol your automotive light "flasher" will never fly. No way on gods green earth would the NTSB allow someones brake light to flash, thats what turn signals are for thats what they need another distraction on the road. So lets see if people buy your junk we will have some people with turn signals that flash at different rates of speed already , some with brakes lights that are on steady when applied and some with flashing taillights so motorists are not sure if you are turning or stopping or stuck somewhere in between.

<MR123IL@webtv.net> wrote in message
> SO YOU WERE BUYING & SELLING BEFORE I WAS EVER THERE! WHAT IS YOUR
> POINT?
==========
what is your point? thats what stooges say when they have no answers You are pointless from day 1 out here, you are saying just because i am from Virginia I cant know whats going on proves you know nothing again.

> SOME ONE HAD TO MAKE THE AMPS FOUR YOU COULD EVEN BUY THEM..
==========
uhh duh Let me see if I can understand your dislexic post. No shit someone made them but it certainly wasnt you

> I GUESS I DON'T REMEMBER A "WILDBILL" FROM VA. OR DAVE EVER TALKING
> ABOUT YOU . SELLING THEM FOUR HIM.
==========
Why would dave need to talk to you about me? who are you? do you know everything he does? i have done business with him off and on since 1994 met him thru 2 guys actually 925 and "five -oh" todd surely you know these guys if you were the big man with dave todd used to roll by my shop on his way to the carolinas you can call dave and confirm this yourself, how long did you work for him 6- 8 months and what year was that? I sold the amps for myself not for him . when hunting season rolls around i do more business and need more amps

> SO NO I DON'T THINK YOU ARE WHO YOU SAY YOU ARE! THAT IS WHY I HAD PUT
> THAT POST ON TO PEAK A BOO IN TX.
> DON'T GET ME WRONG I STILL THINK YOU ARE A DUMB ASS!!

I dont care who you think I am I hang with alot of fellas who are into the keydowns i personally am not and you have outworn your welcome son with everyone as I have said good and bad news travel fast, you may think i am a dumbass but we know you are

> SO WHEN YOU QUIT YOUR JOB! IF YOU HAVE ONE. WE CAN HACK ON YOU AND CALL
> YOU SKUM!!!!!
==========
I dont need to quit my job i am self employed. Go hack on your own crank.

> THE PEOPLE IN THE "CB WORLD" LIKE YOU IS THE SAME REASON I GOT OUT OF
> IT!!
> AND THAT'S BECAUSE YOU ARE THE SKUM AND DON'T HAVE A JOB OR A LIFE!!
---
how could you talk about people in the "cb world" when you have proven to be

the biggest backstabber going today you did them a favor by getting out you are a nobody trying to be somebody and it failed you miserably. I am far from "scum" and have more of a job and life with my family and friends than you do son. Wake Up!

> SO "WILDBILL"
> WHY DON'T YOU JUST GO BACK UNDER THE ROCK YOU HAD CAME OUT FROM!!!

Thats funny I was going to say the same to you since it is you who has came out here crawling and again try to be someone you are not.

I think I'll hold onto my Golden Eagle for awhile. Let the price go up
even more! Somebody told me that in one part of the country, they
were going for $1000! Can you believe that? What is so special about
a Golden Eagle?

I have a Ranger RG99. When I key up the mic, I get an awful squeeling noise. I have tried different mic's, I checked my ground etc. I did some mods on it last year but the problem has only just begun. Any ideas? Could it be the talk back? It also transmits the squeeling too....

Sorry Tim. Had to run. Wife's pregnant and there was alot of stuff I needed to do around the hacienda. I figured on my break time, I'd checked the NG to see what was going on, found your website, got on 580 real quick and found you there. I tried to get a quick QSO earlier, but couldn't get in. So I left the Radio Room and did more chores. Came back and thought you were talking to another guy with the same numbers as me. So I tried one more time and thats when you told me to standby (but I couldn't). I had to run. I'll be back on later though and stop by when I get a chance, alrighty? 73 bro...

Don't surprise me none. Gore has an affluent touch at keeping things
quiet, but so do the Bushmen. Maybe the 'ol prince of a guy won't do any
time at all, then we'll know where that million went. One thing I can
tell ya', word from other folks close to the demos in Washington Dee Cee
is that IF Gore loses, him and Clinton have a plan to burn one in the
rose garden before vacating the Pennsylvania avenue premises, just so
they can say they did it. You won't catch THAT one in the news either.
Then again, maybe you will, I heard about it. Then the Bushmen can
commence a frattin'!

well that will be easy if you have a signal generator and know how to
use it..... get in the wrong cans and you mess up the NB/ANL
system..... I've seen that done a million times....ends up with super
receive a very noisy all kinds of trash coming in.... thats not what
you want,,, hard to get it back....

Well... as you know... this is a very hostile market. Just look at your typical CB customer posting here on the NG.

Bashing this, bashing that, wreckless slandering, this is great, this is shit... and when everything is said and done... we find out he doesn't know a friggin thing about electronics and has no money to spend any way.

With a customer base like that... it makes the hard job of making a buck... almost impossible!

It only does it on AM, not on sideband, and it is almost like it is
overdriving the modulation on AM and after a length of time it starts
to squeal. The saga continues.....

Source record: 58196

I have quite a collection of tube rigs. I have Brownings (Mark III AM and AM/SSB - 5 piece Mark II), Tram D201s, DAK Mark IX, Cobra CAM 88s, Robyn T123Bs, Courier 23, Kris 23+, Shakespeare 740, Regency Range Gain II, Lafayette Comstat 25Bs, Johnson Whiteface and Blackfaces and others that I am ommitting due to being packed away and out of view. I also have some of the esoteric solid state rigs: a pair of ARF 2001 Scanning Transceivers, Colt Excalibur SSB, Handic 2305, Cobra 2000s........

Unless you service older rigs and have a readily available parts supply, or are good friends with someone who does..... You would do best to stay with solid state. It pains me to make that statement, as I collect older technology, but it is the truth. Even after what would seem to be a "complete restoration" you will never know which component will fail next due to age. Each time you turn the rig on, it's a crapshoot. You will never know from day to day if it will work properly or even come on at all when you power it up. I try to rotate my tube "treasures" on the air as possible as I can, and never know if a set that worked flawlessly the last time it was used will give a repeat performance.

If you must operate hollow-state, provide adequate cooling, don't stack on top of the rig, allow a few minute warm up, don't expect anything near the high-level AM modulation offered on many current solid-state rigs, don't expect to be able to lower the output power and still get performance, look forward to better potential for adjacent channel rejection, but be ready to settle for decreased sensitivity. There are exceptions to all the items that I list as negatives, but seldom in one package that "glows in the dark".

There is nothing like the warm sound of tube audio, but in a field of 30+ over S9 signals fighting to overcome a S9+ noise level, who could possibly notice. Even on a quiet day, the warmth of the tube audio will be overshadowed by the amplitude and increased forward output of a solid state rig using high level modulation circuitry.

Enjoy the hobby, get a tube rig in good shape and run it often. However, don't depend on it as your primary rig and keep plenty of room available for swapping the antenna over to your modern rig when you have to use it to continue a conversation on a frequency or mode of operation never offered on the vintage tube offering.

Hello Dave: I have the assembly instructions and will be glad to send them to you. I have made friends with my scanner now, so now I know how to use it. I can scan them or send photo copies to you, in the US Mail.

The Super Scanner Antennas I have worked with had holes in the aluminum tubing where the screws went.

In a bio segment being played on many of the networks, look for a shot of young GW Bush circa 1978 or so in West Texas where he drives up in a car and emerges with his soon-to-be wife. Clearly visible on his car is a familiar looking trunk-mounted CB antenna!

Good Condition. Hi/Low Power switch (4 Watts), LED Channel Display, Nice analog S-meter/RF power out. Takes 10 AA batteries. Real nice older unit, a bit larger than today's hand-helds. Works great. Telescopic antenna tip broken but modified to look like new.

Price is $15.00 plus shipping

Thanks, Frank

<< Will The Real Dummies Please Stand Up???

1. A HIGHER INTELLIGENCE...

AT&T fired President John Walter after nine months, saying he lacked "intellectual leadership." He received a $26 million severance package.

Perhaps it's not Walter who's lacking intelligence.

-----

2. WITH A LITTLE HELP FROM OUR FRIENDS!

Police in Oakland, California spent two hours attempting to subdue a gunman who had barricaded himself inside his home. After firing ten tear gas canisters, officers discovered that the man was standing beside them, shouting "Please come out and give yourself up".

-----

3. WHAT WAS PLAN B???

An Illinois man pretending to have a gun kidnapped a motorist and forced him to drive to two different automated teller machines. The kidnapper then proceeded to withdraw money from his own bank accounts.

-----

4. THE GETAWAY!

A man walked into a Topeka, Kansas Kwik Stop, and asked for all the money in the cash drawer. Apparently, the take was too small, so he tied up the store clerk and worked the counter himself for three hours until police showed up and grabbed him.

-----

5. DID I SAY THAT???

Police in Los Angeles had good luck with a robbery suspect who just couldn't control himself during a lineup. When detectives asked each man in the lineup to repeat the words, "Give me all your money or I'll shoot," the man shouted, "that's not what I said!"

-----

6. ARE WE COMMUNICATING??

A man spoke frantically into the phone, "My wife is pregnant and her contractions are only two minutes apart!"

"Is this her first child?" the doctor asked.

"No!" the man shouted, "This is her husband!"

_____
7. NOT THE SHARPEST KNIFE IN THE DRAWER!!

In Modesto, CA, Steven Richard King was arrested for trying to hold up a Bank of America branch without a weapon. King used a thumb and a finger to simulate
a gun, but unfortunately, he failed to keep his hand in his pocket.

(hellllllloooooooooo !)

_____

8. THE GRAND FINALE

This is a true story! Last summer, down on Lake Isabella, located in the high desert, an hour east of Bakersfield, California, some folks, new to boating, were having a problem. No matter how hard they tried, they couldn't get their
brand new 22-ft. Bayliner to perform. It wouldn't get on a plane at all, and it was very sluggish in almost every maneuver, no matter how much power was applied.

After about an hour of trying to make it go, they putted over to a nearby marina, thinking someone there could tell them what was wrong. A thorough topside check revealed everything in perfect working order. The engine ran fine, the out drive went up and down, and the prop was the correct size and pitch. So, one of the marina guys jumped in the water to check underneath.
He came up choking on water, he was laughing so hard.

REMEMBER, THIS IS TRUE.....

Under the boat, still strapped securely in place, was the trailer.

Subject: Chicken

Why did the chicken cross the road?
Answers from:

VICE PRESIDENT GORE:
I fight for the chickens and I am fighting for the chickens right now. I will not give up on the chickens crossing the road! I will fight for the chickens, and I will not disappoint them.

GOVERNOR GEORGE W. BUSH:
I don't believe we need to get the chickens across the road. I say give the road to the chickens and let them decide. The government needs to let go of strangling the chickens so they can get across the road.

SENATOR LIEBERMAN
I believe that every chicken has the right to worship their God in their own way. Crossing the road is a spiritual journey and no chicken should be denied the right to cross the road in their own way.

SECRETARY CHENEY:
Chickens are big-time because they have wings. They could fly if they wanted to. Chickens don't want to cross the road. They don't need help crossing the road. In fact, I'm not interested in crossing the road myself.

RALPH NADER:
Chickens are misled into believing their is a road by the evil tiremakers. Chickens aren't ignorant, but our society pays tiremakers to create the need for these roads and then lures chickens into believing there is an advantage to crossing them. Down with the roads, up with chickens.

PAT BUCHANAN:
To steal a job from a decent, hardworking American.

JERRY FALWELL:
Because the chicken was gay! Isn't it obvious? Can't you people see the plain truth in front of your face? The chicken was going to the "other side." That's what "they" call it-the "other side." Yes, my friends, that chicken is gay. And, if you eat that chicken, you will become gay too. I say we boycott all chickens until we sort out this abomination that the liberal media whitewashes with seemingly harmless phrases like "the other side." That chicken should not be free to cross the road. It's as plain and simple as that.

GRANDPA:
In my day, we didn't ask why the chicken crossed the road. Someone told us that the chicken crossed the road, and that was good enough for us.

BILL GATES:
I have just released eChicken 2000, which will not only cross roads, but will lay eggs, file your important documents, and balance your checkbook, and Internet Explorer is an inextricable part of eChicken.

COLONEL SANDERS:
I missed one?

4315. Re: Squeal problem with Radio/Amp system

Newsgroup: rec.radio.cb
Date: 2000-11-06 00:00:00 UTC
From: Richard Smith <rsmith@NOSPAMplaneteer.com>
Message-ID: <YFFN5.89477$YG5.68003@tor-nn1.netcom.ca>
Source record: 58202

Sounds like RF feedback into the mike cord.

I had a similar problem. All was okay on SSB until I started to talk. (Some would call that another problem, but I digress...). Then the radio output would go crazy and would transmit a squeal. After much trial and error, I cured the problem by winding the mike lead through two clip on RF chokes that I bought from radio shack (about 3 winds on each). The problem has now gone away totally, and the audio is fine. The only downside is the mike lead is about 6" shorter when uncoiled than it used to be, but I can live with it. The chokes cost me about $13CDN for the pair, (probably about $8US).

You might want to check that the mike shield connection is good on the mike lead connector, the processor mike connectors (input and output) and inside the radio. Have you tried going back to using the stock mike directly connected to the radio to see if there is any difference ?

Let me know how you get on.

Cheers,

Richard
(Please remove the NOSPAM if replying via email).

What does the SWR go up to when the amp is on? If it jumps
up quite a bit (like close to or into the red), the RF ground
at the antenna mount may be inadequate. Another, less likely
possibility is that the antenna is breaking down at higher
power levels. A third possibility is that the amp is becoming
unstable in the RF dense environment. That possibility is
more likely with the biased amps than with unbiased amps.
Since yours has the "12" suffix, it's probably biased.

> I also should say that I run 18 feet of Belden mini 8, from the radio, to the
> amp..... , 6 feet of JoGunn 'Audio-Flex' RG213, from the amp, to a Cherokee
> TM-3000 wattmeter, and 12 feet of the JoGunn coax to the Antenna mount.....

Those are not necessarily resonant cable lengths, which is
what is recommended for use with comp amps like the X-Force.
However, it really shouldn't matter as long as the antenna
and amplifier input circuits have impedances that are close
to 50 ohms resistive.

> Barefoot (with amp off), EVERYTHING works GREAT!!

That's how it always is. When you run power, the little
things that don't matter at low power become important.

> I used to have the 55V,

The extra ground leads can actually make it worse. More on
that below.

> right, and I have spent quite a little bit of money. Unfortunately, I am
> totally frustrated with my car, and this setup.....

You'll get there. It just takes alot of messing around
to get a high power set-up going sometimes.

> The only thing left that I could think of, is that the AMPLIFIER isn't
> getting sufficient ground. but that wouldn't explain why It wouldn't squeal
> with just the radio and the amp on....
> I'M LOST!!!
> I would appreciate any suggestions......

I just went through a similar situation with a 575, a 77-250,
and an XT-400 in a truck. The set-up worked beautifully on
the bench but would squeal in the truck. Funny noises would
come from the amp, and the squealing wasn't the typical audio
feedback, it was more of a grinding distortion. The first
thing I found was a mismatched antenna. The SWR was about
3.5:1 and very reactive. I used a 259B to tune the antenna.
At that point I thought I had it whipped. The SWR was almost
the same regardless of whether the amp was on or off. That
told me the amp was stable, the RF ground was sufficient,
and that the antenna could handle the extra power. That's
where you (Maniac) should start. Make sure the SWR at the
output of the amp is low no matter what.

Now, on with the story. Even with the excellent SWR the
squealing continued. All the usual substitutions were
made, but didn't work. In the end, the problem turned
out to be a ground loop that was pumping RF into the radio.
In a nutshell, the solution was to redo the DC installation
properly. In a high power set-up the "star" system of
DC wiring needs to be used. In other words, one particular
point for the DC positive and another for the DC negative
have to be chosen, then all DC supply lines are run away
from those points. For example, the battery that is
connected to the starter is the central point. Every
positive and negative wire in the CB system is separate
and runs from the central points to each particular piece
of equipment that has DC connections--that includes mic

processors and powered meters--everything that requires DC from the vehicle. The inclusion of isolators and additional batteries can cause ground loops even with star wiring if there is significant resistance in any of the common chassis paths between the stock battery, the alternator, the isolator, and the additional batteries. The "star" DC grounding point in multiple battery systems can be unclear. The best point is usually the opposite end of the stock negative battery cable. Returning all the batteries, the alternator, the isolator, and all the CB grounds to that point may be the best insurance against a ground loop unless you're *absolutely* sure there is no significant resistance between two ground points. All it takes is one piece of equipment being connected to one resistive ground path to create a conductor for stray RF. Shielding and decoupling can only cope with so much RF--after that symptoms start to crop up.

Of course there's no guarantee that this will solve your problem. It's just another step in the "messing around" that is required to get a high power set-up going. The idea is that if you can't answer the question "what's wrong" directly, you will eventually answer it indirectly by being able to answer the other question: "what isn't wrong?" For example, if you know the antenna and RF ground is *not* the problem, and a ground loop is *not* the problem, then the next step is to make sure the mic and related gizmos are properly shielded and RF degoupled. When you're sure that's not the problem, you're left with the possibility of inadequate decoupling or shielding within the radio itself. Hopefully, it won't come to that because solving those types of problems can be like looking for needles in haystacks. Isolating the problem isn't too hard. Substitutions are all that's necessary. If a well shielded and decoupled mic is substituted and gets rid of the squeal, you've found the problem. The same goes for the radio. If a radio that is known to work properly in an RF dense environment (close to an antenna that is being driven by an amp that makes about the same amount of power as yours) works in your vehicle, you've found the problem.

I hope this helps. Don't give up.

Right on. If you have something for sale you can mention it "once in awhile" like an item a week or an item every 2 weeks. But if you mention it everyday most folks call it Spam. Spamers are not wanted on the group. If you buy and sell radio equipment on almost a daily basis, the NG is not the place to advertise each item as you have them up for sale. Ebay or some Classified web page is for that. A casual item or two is ok as long as you don't do it everyday. The NG was not set up for selling items. Questions, Answers and information is what it is mainly for....NOT selling on a day to day basis. If you have an item for sale it's ok to list it but don't do it everyday. Don't list a different item everyday either. Set up a web page for your items for sale then once a week or better yet once a month advertise your web page. Hillbilly has a repair shop with I'm sure many items in the shop for sale but doesn't push it on the group. If someone looks hard enough they can find this information in his posts but he is not pushing it on anyone and not filling up space in the NG by advertising it. Many other people advertise this way without advertising in an annoying type way. (I picked Hillbilly because he also responded to this post) Read closely, pay attention and you can learn a lot more than at first meets the eye about what all is available and for sale.

Most of the time (not always) someone that is always advertising their business a lot or pushing a lot of items usually is NOT the person to deal with. It isn't to polite to "toot your own horn" You have to advertise some to get your name out there but to much and you smear your name and business. Make them aware but don't annoy.

Bob Biker runs a short add about his tube sales on the NG about once a month. He has great tubes and great service and will answer technical questions well. He is quick, simple and to the point with his advertising. Nobody objects because he does it in good taste. Advertising your items everyday is not tasteful.

Now, if you do have a business and make a good impression on someone else, there is nothing wrong with the satisfied customer mentioning the good service or product they received but don't tell how great you are yourself.

Find a post by Bill Neither, hit reply to author and ask him to give you the link to frequently asked questions about the newsgroup. This link may help explain the ways to use the group (not that these are obeyed by all but it's nice if you do) and

get you a little more respect towards your postings.

Just trying to help, no disrespect implied,

Mike

Scott wrote:
>
> How much drive (watts) do you use into the 4500?

It can take whatever any normal (no extreme power mods)
CB or 10 meter/export radio can dish out. Just go easy
on the AM dead-key if you don't want to sound pinched
or muffled.

> I have a RCI-2900 that doesn't have
> variable power that I am going to use with my 4500. I will have to internally adjust
> the power if 25 watts is too much.

That's not too much peak power. Just keep the dead-key
down to around 2 watts to preserve the headroom that's
required for nice, loud, punchy audio on AM. Explore
the possibility of a negative peak compression mod if
you use AM most of the time.

> Also, are all 4500s high drives?

All this high-drive/low-drive stuff is fueled by an
ongoing misconception that there really is a distinction
made in the industry. There isn't--it's that simple.
Here's the truth: a trully "high-drive" CB amp would
have to have no gain compression even with a "keys 10
swings 30" input signal. Until you get to an amp that
has only one 8-device stage (like a Texas Star DX1600)
there will be gain compression unless the amplifier's
input is severely swamped with input resistance. Any
amp that swamps the sh*t out of the input is an un-
desireable amp because swamping the input lowers the
maximum peak power. In the CB amp industry, peak
power is the Holy Grail. No amp manufacturer is going
to shoot himself in the foot by over-swamping the input
circuit.

> Or did you have
> to specify that when ordering?

You don't have to specify anything special because in
the industry there is no distinction between high and
low drive--there are just amps--that's it. Here's the
big secret: the amps with more transistors and no driver
stages can handle more input power for the simple reason
that there are more transistors there to drive. Think

about that. That's the whole story. Almost every CB amp made has no input swamping resistance when set on its highest output power setting. Given that, an amp with 4 power transistors and no driver stage requires (can handle) twice as much drive power as an amp with 2 power transistors. The math is that simple. If we keep going, we find that an amp with 8 power transistors and no driver stage requires (can handle) twice the drive power of an amp with 4 transistors.

The concepts of gain compression and negative carrier shift are what elude many CBers--and even many techs and dealers who handle amps.

Full blown explanations of gain compression and carrier shift may be pushing it a bit as far as this thread and forum is concerned. In other words, the top guys here already understand these concepts, and many of the other readers won't understand (or don't care), so I won't go into it here.

Anyone who whould like me to explain these concepts and how they apply to making an amp choice should e-mail me. I'll either work with you one-on-one, or, if there are enough of you, I'll steer you to a mailing list where we can hammer all this out without disturbing this forum.

One quick note:

Anyone in the group that wants an in-depth explanation should have already studied the AM Tutorial that is on my website. The sharper (higher IQ) guys will begin to understand gain compression and carrier shift just by studying the AM Tutorial. The sharpest guys won't need any further explanation at all. In other words, it's possible to extrapolate the concepts of gain compression and carrier shift from the info contained in the AM tutorial. There is a link to the AM Tutorial below.

Duhibrokeit,
Can't help with the radio/amplifier, but ~can~ tell you why
your old radio didn't like jeicopters. There's quite a static
charge bild up from the rotor movement through the air. It can
definitely affect radios. Also why you don't ever touch anything
hanging from a helicopter till it's grounded...

I think 80 watts is pushing the Lincoln abit even "turbo tuned"..of course I am nowhere near an expert. However I have a 2950 and run the 4500 in my pickup. I see a little over 500 watts swing on it. I also have had the 2510 in my pickup as well. The place I go to buy all of my stuff is www.exportradios.com. I am NOT sorry that I bought the 4500HD. I get good reports tru out the country on my rig.

Peace

4339. Squeal problem with Radio/Amp system

Newsgroup: rec.radio.cb
Date: 2000-11-06 00:00:00 UTC
From: maniac9188@aol.com
Message-ID: <20001106105537.23535.00000028@ng-fs1.aol.com>
Source record: 58274

I have a Galaxy 55V mobile radio, an Astatic Mobile Max microphone processor box, An Astatic 636 Noise-cancelling mic, and a Paradynamics PDC101 external speaker..... This is connected to an X-Force X60012 mobile amplifier (2X6), a Stargun 24-1 mount with a quick disconnect, and a Stargun 76-2, dual-coil antenna (32" shaft)......With a low SWR match (1.1--1.2, after amp, barefoot).. I also should say that I run 18 feet of Belden mini 8, from the radio, to the amp..... , 6 feet of JoGunn 'Audio-Flex' RG213, from the amp, to a Cherokee TM-3000 wattmeter, and 12 feet of the JoGunn coax to the Antenna mount..... Barefoot (with amp off), EVERYTHING works GREAT!! I used to have the 55V, and the mobile max on my base antenna (Imax 2000), and I did not notice any talkback from the radio (this is WITHOUT the Mobile max on).NOW, suddenly when I mounted the radio in the car, the radio HAS talkback!! (I bought this radio, from a truck driver.....,, so I know nothing about the radios past.) I thought at first this was the problem, but with the amp on, and the mic gain wide open, it doesn't squeal. And it really doesn't sound like a distinct MIC squeal, I hear it coming out from inside the amp. It only happens if I turn the mobile max, and the amp on at the same time. The reason why I think it's a mic problem, is that.. I could hold the mic face down, in my lap with everything on... and it WON'T squeal. AS SOON as I lift the mic to my mouth, it squeals!! Next, I thought IT MUST be a ground problem, so i grounded the mic jack, the coax coming out of the radio, I seperated the ground leads for the radio, and the mobile max, and connected them to the frame. I tried it again, and it still squealed!! Right about this time, I got so pissed off, I just locked up the car and went in the house.....
Some other things you would need to know: my car is a 1993 Chevrolet Beretta GT, with a 3.1 liter V6, with a 140 amp alternator, a 200 amp battery isolator, a Champion 650cca battery under the hood, and 2) Interstate 950ca Diesel batteries in the trunk, with 4 ga. welding wire ran throughout, for power and ground..The radio, and the mobilemax are using the SAME power lead (that also might be the problem.....) This system does EXCELLENT power when it's working right, and I have spent quite a little bit of money. Unfortunately, I am totally frustrated with my car, and this setup.....
The only thing left that I could think of, is that the AMPLIFIER isn't getting sufficient ground. but that wouldn't explain why It wouldn't squeal with just the radio and the amp on....
I'M LOST!!!
I would appreciate any suggestions.....

Maniac ..
NW Indiana

Maniac,
If the noise is coming from the amplifier it's self,
I wonder if you're over driving it (too high an output
from the radio)? Except for fan noise (maybe), you shouldn't
hear anything from the amplifier.
As you thought, it could also be from an RF feed-back,
because of inadequate shielding/grounding of some component
in the system. Some mic cords are better shielded than others,
and if the amplifier isn't shielded/grounded adequately, the
'leakage' could certainly cause your problem. Any chance of
you moving the amplifier further away from the radio etc, at
least long enough to see if that may be it? If that doesn't
help, then it's back to the same old routine... ground, shield,
and a liberal use of torroids...
'Doc

He is getting RF feedback, most likely through the processor. A few toriods on the power input to the processor and the audio lines will most likely eliminate it.

Message-ID: <8u6omo$c2e$1@mark.ucdavis.edu>
Source record: 58281

Actually, the filter was slightly wider than that, but close enough for the example. But your wrong... 3 KHz is just fine for most normal audio conversations. Your telephone uses industry standard 300 Hz to 3.3KHz audio band width for your regular calls. I'd say that most common telephones sound pretty good.

We're talking "communications audio" here, not broadcast radio audio. A properly aligned radio should sound clean and clear, not like a broadcast station. The radio was designed for communication, not broadcasting...

The advantage of the crystal filter is quite a bit, especially on the receiver end where you don't have to hear a lot of crap that a horibly wide stock am cb receiver allows through.

Most of the people your talking too should be on the same frequency anyway, otherwise you tell them to fix their radio, right.

The siltronix placed the carrier within the passband of the crystal filter by a common trimmer cap offset method. Rubbering is a bad label that doesn't properly describe the circuit. Sounds as bad as "pill" for transistors...

Looks like a lot of people got spoiled on generic wideband radios. When it comes down to skip and dx conditions during band openings, we're hearing the other guy where many wideband rigs don't. Wideband receivers get a lot of whistles and howls...

cheers
skipp

: tnom@mucks.net wrote:

: D-104) The alleged 'drift' problems are almost non-existent with my rig.
: She's a real workhorse!
: A.E. 352

Yeah, it works with that 444, but try a non powered D-104 or similar
crystal cartrige mic in front of that radio and ask for opinions. The
crystal mic will out preform the dynamic every time. More punch in the
right place for the siltronix.

Anyway, I've got the manuals for the Siltronix all scanned in and ready to
set up on the http://sonic.ucdavis.edu server. With a little time,
they'll pop up on the net.

You are forgetting one thing. The filter is about 3kc's wide. This
only allows 1.5 kc's per side. Not enough for "great" audio on AM.
It's fine for SSB but not for AM.

While Ancient Modulation was not an option on the amateur Swan 270/300, cw was and I suspect that both simply unbalanced the balanced modulators. In the CW mode it would be a good idea to block audio but there is no good reason to do so if the object is Single Sideband AM. Most Antique Modulation detectors could not tell the difference. If that is all that is done, a 3KHz filter is admirable.

>Modulation detectors could not tell the difference. If that is all that is
>done, a 3KHz filter is admirable.

Well the Sil does not use Single Sideband AM. We know this because the
feed through frequency for AM is shifted away from the normal USB
frequency by the use of a trimmer cap. Therefore the upper and lower
sideband portion of the AM signal must share a path through the 3kc
filter. It's a tight fit.

4353. FS Texas Star Mod V in Twin Cites of MN

Newsgroup: rec.radio.cb
Date: 2000-11-06 00:00:00 UTC
From: SwTempo <swtempo@yahoo.com>
Message-ID: <I+cGOs2xJyMkljSk77iMKZZaKr7U@4ax.com>
Source record: 58288

I have a "Texas Star Mod V" for sale. It's basically a modulator
that's capable of putting out up to 125 watts. Of course that will
depend on YOUR radio/antenna setup. For those who don't know, the "V"
in the name of this unit stands for "Variable power". The original
control for that has burned out, so I replaced it with a 3 way switch
that gives you a low, medium and full power setting.
Point you web browser to this address for a picture of this nice
little amp
http://www.texasstar.com/export/modvEX.gif

This unit goes for $125 new. I will sell this item for $75.00 plus
shipping if you live outside the Twin Cites of Minnesota. If you live
in the Twin Cities, I can meet you somewhere.

For those of you outside the Twin Cities. Payment options are cashiers
check, regular or postal money order and PayPal. Paypal would be the
easiest, safest and fastest way to pay and I believe you could use
your credit card.

Please email me if you have any questions.
swtempo@yahoo.com

4354. Who is"Bob" on 27.555 ??

That it be. Especially if it had the 16pole filter available on the amateur
rig.

How much drive (watts) do you use into the 4500? I have a RCI-2900 that doesn't have variable power that I am going to use with my 4500. I will have to internally adjust the power if 25 watts is too much. Also, are all 4500s high drives? Or did you have to specify that when ordering?

Scott.

> being peaked out.

That's not true, but it really doesn't matter because only
simple tuning changes are required to make it drive an amp.

> The amp I am wanting is a Cobra Magnum 4500 high drive.

That's a great choice for use with your particular radio.
The more generic name for that amp is: Blue Face XL450.
That amp can have numerous names, so it's nice to know
the generic name.

> I am
> planning on running Wilson 5000 trucker antennas, one only the second just for
> looks.

A better choice would be a DC grounded antenna like a
base loaded Wilson 1000 or 5000. Any antenna that uses
3/8-24 mounts (like mirror mounts, ball mounts, etc.)
are not DC grounded and are more likely to build up
a static charge that the radio will have to deal with.

> The CB shop that I have to go to, is out sky high on prices, they want
> me to run a Texas star 350, and its nearly 1 dollar per watt.

With a high power radio like yours, a 4 device amp is
a better choice. The Texas Star 350 is a 2 device amp.
The XL450 is a 4 device amp with a similar equivalent
being the Texas Star 400.

> The prices I see
> here are considerably cheaper and the info from reading seems to be more
> helpful. Any info will be appreciated.

Your particular application requires attention to static
protection. A DC grounded antenna, equipment case grounds,
and an actual Earth connection when the vehicle is parked

are in order. The rubber tires insulate the vehicle from having an actual ground (Earth) connection. For DC purposes, the negative battery post is the zero volt reference, but it's not an actual Earth connection. An actual earth connection can be a piece of chain or a jumper cable that is solidly attached to the vehicle chassis and can be thrown on the ground or attached to a metal fence post when you are parked. You can be creative with this; the only requirement is a connection from the chassis to Mother Earth. Also, when in a particularly bad environment (like an electrical storm), if you aren't using the radio, disconnect the antenna entirely. If you often find yourself in that type of situation, an antenna switchbox might be a handy addition. Use the switchbox to switch between the antenna and a dummy load. That way, even if you acci-dentally transmit, there is no risk of damaging anything. Also, if you're talking to someone nearby, they will hear you even when you're transmitting into the dummy load. In other words, a dummy load may be a better load when you're around helicopters or in electrical storms.

Based on what you said, the problems you had with the 25 and the 225 were probably due to the antenna and bad grounding more than the choice of radio and amp. When tuned right, and running into a properly functioning antenna, a 25 and a 225 is not a bad little, low-cost set-up. Given that, unless the other details are attended to, it's not unlikely that the Lincoln and 450 will have the same problems.

> Polaris

I hope this helps.

4374. Need help, new cb/amp/antennna set up

Newsgroup: rec.radio.cb
Date: 2000-11-06 04:05:04 UTC
From: duhibrokeit@cs.com
Message-ID: <20001105230504.11227.00000113@ng-fn1.news.cs.com>
Source record: 58260

I do not want to have the most powerful CB out there, but want something more powerful than I had. My CB and amp were stolen out of my truck, and I want something better. I had a Cobra 25 NW WX ST CB, and a Palomar 225 amp. I had problems with this set up, either it would squeal or wouldn't reach out. Plus I was hit by lighting, and I work around helicopters and if there were any running up the radio would turn on and squeal something awful. I am glad it was stolen, I was getting very annoyed with it and the money I had into it. I now have a Presidential Lincoln and I'm told that it puts out 80 watts with out being peaked out. The amp I am wanting is a Cobra Magnum 4500 high drive. I am planning on running Wilson 5000 trucker antennas, one only the second just for looks. The CB shop that I have to go to, is out sky high on prices, they want me to run a Texas star 350, and its nearly 1 dollar per watt. The prices I see here are considerably cheaper and the info from reading seems to be more helpful. Any info will be appreciated.

4376. Re: SS4900B

Newsgroup: rec.radio.cb
Date: 2000-11-06 05:22:37 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8u5f8sgjn1@slb7.atl.mindspring.net>
Source record: 58262

It can be set by internal option jumpers for 40 channel AM only, AM/FM only, AM/FM/USB only, AM/FM/LSB only, Export (15 bands 455 KHz wide, AM.FM.USB.LSB) and 10 meter all modes operational with repeater offsets. Coverage of 23.8 to 30.5 MHz possible.

The packet header on the PCB has discriminator out (not affected by volume or tonal circuits), Audio in (not affected by Mic Gain), remote keying on transmit. There is a 2 pin header to connect an external S-Meter.

The AC power supply is a little anemic when the set is pushed to the limit on AM or FM for any length of time. There is a "dead spot" on the variable RF power control under 3 watts. The Roger Beep is a good NASA copy in tone, volume and duration. Memory channels can span all 675 channels without having to change "bands". Direct channel entry allowed, but limited to designations 1 - 40, so band changes may be necessary. DTMF storage of up to 5 tones for remote pager or DTMF coded talkgroup operation. Clarifier is tied to transmit, making SSB roundtable talk near impossible. Frequency display is not a counter.

It is a nice rig with good audio and plenty of potential.

Your mileage may vary, dependent on the configuration the rig was sold in. The actual OEM markets it in both 29 and 27 MHz models.

Your right about the antennas stacked to close.Another 10- 20 feet separation would make a big difference.The biggest gain from stacking up and down like this is the lower take off angle.

Hello Bbqpdq: Even if your radio is working fine on SSB, it just maybe there's no one out there on SSB. Try channels 36, 37, 38, 39, & 40 LSB for a few locals stations on SSB. Also listen in on the local AM channel, and ask if there's a few SSB'ers on the upper channels.

The antenna may not really cut the mustard, for long distance contacts, and may only be good enough for local close in stations.

Even in Los Angles, I don't hear the crowd that use to be on the upper SSB channels. In the San Fernando Valley, they hang out on 33 USB of all places.

Tell'ya what Hank', if your 'dad' worked for the railroad;
1. He'll never be elligible for $300,000.00 in retirement funds.
2. No one, Bush, Gore, Nadir, etc, can touch thier retirement
funds.
3. You have a fourth choice, don't vote. Same as voting for
Perot(sp).

Hello,

for an experiment I need an receiver with signal-indicator at 147.456
Mc.
My Yeasu 290R should be possible to modify the
frequency range from 144-146 to 144-148.
Can anybody teel me how to do it?
It should be a minor modification, as some of the
transceivers were standard able to do the complete range from 144 to
148.

Thanks in advance,

Jan de Vries

Before you buy.

4394. The amp I bought from Richard Hale "The Tube Man" Part II

Newsgroup: rec.radio.cb
Date: 2000-11-07 00:00:00 UTC
From: lzboyz@aol.com
Message-ID: <20001107093341.24525.00000056@nso-co.aol.com>
Source record: 58246

It is very possible that this amp was working when they shipped it.
Let me explain.
I took the covers off of the 2x4cx250b amp and looked at/checked everything that I could without taking the components apart. There was a lot of work done to the amp recently and the solder joints are not cold. I reversed the tube installation. I turned the amp on and with a 1.6 watt drive I tuned it. It had jumped up around 50 watts. I picked up the amp about 2 inches and dropped it and picked up 200 watts. Now we are looking at about 400 deadkey watts. It would not develope any more. I ran the amp for about 45 minutes. It seemed to be working ok. I was talking to a local about 7 miles away when I saw the meter drop to 150 watt and before I could unkey I heard this "CRACK". The lights flickered in my house and the fuse blew. I jumped about a foot in the air !!!!!
It was rather loud.
This doesn`t sound like a good thing to me. I left the amp sit there and shut everything down.
Richard has told me that he sent me more tubes to try. I will try them when they get here, but I don`t have a good feeling about this. I assume that the worst has happened and I am now looking at an 80 lb paper weight.
My words of wisdom are, "Don`t buy a used amp from someone that you don`t know, because you are probably going to regret it."
I was stupid and learned a great deal from this experience.
Something good has come of this though, the government can not tax me on the money I would have saved, if I wouldn`t have bought this amp.
I hope you learned something from my mistake.
Take care
Randy

Dave,
Maybe you consider it "he did what was expected", but you don`t know the whole story behind this. It was way beyond what was expected. I ship freight every day either UPS, FED EX, or LTL. He did more for me, than I normally do for the people to whom I ship to. That is what surprised me. I don`t know Tony, and I have also seen some of the same items cheaper somewhere else, but I would not hesitate to buy something from him/them because of the service he has given me.
Thats my 2 cents
73

Tim,
You seem to be missing the point. Maybe you think I`m stupid, maybe I am, maybe I`m not.
I`ll try to make this a little easier for everyone, including you, to understand. I have been working with electrical devices my entire life. I did not stick my hands in this thing while it was energized. As a matter of fact the caps were discharged before I started to look at it. I don`t claim to be a rocket scientist. Back when we were building tube xsmitters in school I learned that some things need dropped to work. Yes, I saw it first hand. I also saw my lab partner put his head thru the drywall when he reached into the back of a color tv.
I now sell equipment and accessories that start at 600 volt and top out at 345kv. I`ve been in electrical fields that make your skin crawl.
I`ve also been in radioactive areas. Maybe thats whats wrong with me.
You are correct, I can not build an amplifier, but I know what it does. And have a pretty good idea of how it does it. I have had some hands on experience, but I`m not a design engineer like you are.
I`m sorry if this offends you, but you have to know me before you can say I`m stupid.
I also own or have owned other tube and solid state amps.The largest amp I have operated would key 800 watts. I have not had this problem with the other amps that I`ve used. Of course, they were all purchased brand new.
I`m not the big strapper that you are, and once again I appologize to you if this offends you.
Thank you for taking the time to read this.
73
Randy

Source record: 58308

Greetings!

The Grant, if it hasn't been tinkered with from a local tech, may not be the problem.

The antenna, if it's small can be the problem. Can you update the antenna to a longer or better one to suit your needs? It's always a good idea to get a better antenna every few years until you found the one that works for you. Antennas and mounts do age, so care of them is important.

...Or...[related to the Grant being stock]

The Transmit frequency may be off enough so that others that can tune to you, don't want to take the time to talk. I have come across people that use SSB, and one station is "rock-bound" and can't slide around like the other stations in the group. They all tune into this station and are forced to stay there. If your transmit is slightly off, this may cause a QRM-ing [interference] problem, although not intentional, does create difficulties.

Lately in the local SSB crowds around here, there is so much skip and tom-foolery going on between AM'ers and SSB'ers that war could erupt at any time.

In my own experiences, it took quite a while to locate enough people to even attempt to try a "QSO" on SSB. With skip conditions the way they are, many SSB'ers have hung up the mike waiting for the solar-cycle to lessen so they can have roundtables again without constant interruptions.

The above scenarios may not apply to your case, but it is something to speculate as you tune in to different SSB "QSO's" [conversations] in progress.

On 07 Nov 2000 06:17:26 GMT, while the modem was pondering it's navel, bbqpdq@aol.com (Bbqpdq) dissertated the following:

:+> Hi,
:+> I have been reading this newsgroup for a few weeks and I would like to ask a
:+> few questions. I recently bought my first SSB radio, a factory refurbished
:+> Grant XL. The AM works fine but I have yet to have a conversation with anyone
:+> else using SSB. I think the radio is working because I can sometimes hear AM
:+> transmissions while listening in USB or LSB. I wonder if I am doing something
:+> wrong?(I read the manual that came with the radio. It seems simple enough.) I
:+> am currently using a my cartop antenna and I have cheked the SWR. It is around
:+> 1.75. Is this just not a sufficient antenna? Should I have the radio checked?

:+> Is it possible that noone in Southeast Tennessee uses SSB? Any ideas?

Source record: 58309

Hello Mr 503 NJ:

I hope you get a chance to read this......You said about a year agoon this message board that you would become a CB radio force on the Super Bowl.....I was one of those who doubted you, But I must say you have proved yourself beyond all expectations.

Within the past year you have developed yourself a radio station that is outstanding. When your on the band, I hear your name being called and you are locking up the Super Bowl.....That is a amazing acomplishment. Within the last 2 weeks, you had to do something else to your station, because, you are really getting your name called above anyone else, Including Prime Time WDC, Booty Spanker Virginia, Earplugger New Jersey,and Slim in Maryland, and many many others.

It is a pleasure to actually hear someone lock up the CB radios most difficult station,Super Bowl Six.....So you should pat yourself on the back. Dont let any of those CB radio politicians deter you from what you are doing.....They have their favorites, and they will not tell their favorites that you dropped the maul on them, But dont let that bother you.....I have people that I am in contact with in different areas of the States.....They tell me that when you key up.....You are cutting off lips big time. If those politicians could be honest with themselves....They should be honest enough to tell you that you have become one of the top 2 radio stations coming out of the East.

I hope you and your family have a fine Holiday coming up.....And remember......Keep up the good work.....Dont worry about people not telling you your station is kicking ass and taking names.

Peace
Mr Big

.and just WHAT was the answer MR. Scott? Show me one, just one of your posts that refer to manufacturers claims that cbers are why amps are expensive for you to buy! Hell, Leland! You are the one who doesn't like what he hears. As I said before, you are a hammie, so build your own if you can't afford it. But then you would have to resort to consulting someone here on the ng to help ed-u-ma-cate (sic) yourself, judging by your past posts, your elmer (if you even had one) has done you a great disservice.

Hey Doc..did ya' check out the news lately? Folks ARE throwing their votes away. Just like you mentioned Perot, the third party candidates are the "swing" vote. Could sway it either way. Ah, hell. I understand their rationalism..what will be interesting this time around is to see what kind of percentages vote third party. If the percentage goes up compared to past elections, it's only a matter of time before the momentum builds and a third party actually has a fair shake.

4410. Re: Interested in becoming a HAM?

Your welcome Jay, I am appalled at some of my fellow hams and there attitudes towards CBers. They fail to realize that many are extremely knowledgeable and are tired of the mess on CB. Many of the operators would really enjoy becoming amateurs if the idiot ones would knock off the bullcrap. I will tell you that many have so little in their life they pick on other hams based on the date they got their license.

The new regs make it much easier to obtain a license and has really opened the bands to a much wider group. Ignore the few, but vocal idiots! I have been licensed since 1956 and for the most part those on the air are no different than what you find on CB. Like you, we have the loud moth radio rambos, the trouble makers, and the great guys. Only the proportions have changed!

In any event if I can assist you in any way please let me know.

Fred W4JLE (Extra Class)
Hamming since 1956 and it gets better everyday!

hi randy, no offense to me at all. all i'm saying is you shouldnt buy a amp you cant trouble shoot or at least have a knowledgable and trust worthy person close buy that could do it for you. since you do have all that experience with electronics and tube equipment i'm sure it will be know big deal for you to find the real problem and let us all know instead of the wild accusations. at first you say it was total junk now you say it may have been hurt in shipping. you have to not be so wreckless. seems like richard hale is being mighty reasonable.

In addition:

IONOSPHERIC RADIO SIGNAL PROPAGATION

Radio waves can be classified according to various types of propagation. These propagation types are ionospheric, tropospheric, or ground waves. Ionospheric radio propagation provides the major portion of the overall radiation that leaves an antenna at some elevation angle above the horizontal plane. Much of the short and long-distance communications below 30 MHz depend on the bending or refraction of the transmitted wave in the earth's ionosphere which are regions of ionization caused by the sun's ultraviolet radiation and lying about 60 to 200 miles above the earth's surface.

The useful regions of ionization are the E layer (at about 70 miles in height for maximum ionization) and the F layer (lying at about 175 miles in height at night). During the daylight hours, the F layer splits into two distinguishable parts: F1 (lying at a height of about 140 miles) and F2 (lying at a height of about 200 miles). After sunset the F1 and F2 layers recombine again into a single F layer. During daylight, a lower layer of ionization known as the D layer exists in proportion to the sun's height, peaking at local noon and largely dissipating after sunset. This lower layer primarily acts to absorb energy in the low end of the High Frequency (HF) band. The F layer ionization regions are primarily responsible for long distance communications, sometimes in conjunction with the E layer in a variety of mixed propagation modes.

Vertical incidence ionospheric sounding devices are used to determine the virtual height of an ionospheric layer at various frequencies by beaming energy upward and measuring the time delay required for the round trip. The critical frequency for a vertical incidence sounder is the maximum frequency above which no energy is returned to earth for a given layer. An ionogram is a graphic representation of such sounding and usually depicts the height of the layer (or the time delay) as a function of the sounding frequency, along with the intensity of the return signal. An oblique sounding device may require the cooperation of a corresponding receiving device at a distant point in order to depict received energy which has been transmitted at incidence angles less than 90 degrees in elevation; it may also make use of backscatter techniques to assess the propagation path. Devices such as these can then be used to

assess (in real time) the propagation path frequencies which
can be supported, up to and including the Maximum Usable
Frequency (MUF).

I explained in a prior post were a CBer using a 300 watt amplifier on AM was no more than about 6 db (about 1 "S" unit) different from a CBer using a stock SSB rig, as far as the power in the sideband signal was concerned. The SSB rig would have cost less than the cost for the 300 watt amplifier and the high current power supply to run it from.

Two CBers using stock SSB radios would have about equal effectiveness at communicating, with each other, as would two CBers illegally using 300 watt amplifiers on AM.

It seems that Hams are a little smarter than you would give us credit for. The above reasons are why there is so little AM used on the Ham bands, and most of the comminations are conducted using sideband. This is particularly true when operating through the Ham Radio satellite linear transponders on V/UHF, and above. There are also additional benefits to using SSB too.

The sideband power calculations were simple. You should have been able to figure them out for yourself.

How was the amps shipped? I have seen many tube type amps shipped UPS etc
and they have been banged around dropped etc. This is certainly not good for
the tubes at all . Tube amps should be shippped without the tubes in the
socket also. By you picking it up and dropping it to get it to do more watts
shows that you dont know how to fix electronics, there is probably a tube
filament problem perhaps ..Why not get a big hammer and beat on it perhaps
you will see more watts he amp should "LZBoyz" <lzboyz@aol.com> wrote in

C`mon Tim, are you telling me that I should be able to repair an amp that was completely altered from it`s original form ??? I shouldn`t have to do anything to this amp except plug it in. I told Richard I didn`t want the amp because it looks like junk and it is junk. I was told it was a 9+ on a scale of 1 thru 10. That would be pretty friggin good in my book. I didn`t get anywhere until I posted my experience on this ng. If I could fix this thing why would I buy a used one in excellent condition, when I could build one out of parts. 20 years ago I could of fixed this amp. I do not deal in this type of equipment, that`s why I come here. I try to learn things. If I knew everything I wouldn`t be on here typing this.
I told Richard there was something wrong with this amp when I got it. I wanted to send it back to get fixed and told him I would pay for it if there was something I did to it. I got no help from him. It turns out that there is probably some loose connections. Have you ever tried to find a loose connection in something like this ??
Yes ???? I`ll send the amp to you and pay you to fix it. Do you have a tube tester for the 250b tubes ??
Richard has told me he sent me other tubes to try. At least he was willing to do that after I posted on here. I told him If the tubes work I would send them back. Meaning that I would buy new tubes for the amp.
Are you Richard or a friend of his ???
If this was a straight up deal this would not even be on the ng in the first place.
If you want to continue this I think we should take it to email. These people are tired of this shit. I`m not hiding anything and I`m not going to run away. If you saw this amp you would know what I`m talking about. If I wasn`t so cheap I would buy a digital camera and post pictures of it so you could see it. I don`t think even you could fix it.
Thanx for reading
Randy

And what does anything in that post have to do with my question concerning your statement of error relating to amplifier cost? You ducked it again. Ya' know Leland, I am beginning to think you like to read your own posts, you know the type, the ones who like to hear themself talk. I have many hammie friends and there are a few mighty fine ones in here as well, but you don't hold a candle to any of them. Hammies are smarter than I give them credit for? Where did you draw that inference? Quit assuming. I don't categorize anyone, hammies included....except you. You're in a class all by yourself.

If he can't use a calculator that's not my problem if he can punch the numbers in for himself. The fact that he has not posted any numbers, to disprove my claim, only shows he has no clue about what I'm talking about, otherwise he would not have wasted any time trying to show me I'm wrong. So, any additional information would be wasted on him, he would not understand it anyway.

Oh, Tim, have you got any comments about your web page from any Hams lately?

You`ve got a good point Wild Bill. The amp should not have been shipped with the tubes in it. Also, I never said that I fixed electronics. Whatever that means. I told you guys before and I`m getting tired of repeating it. There was something wrong with the amp when I got it and Richard was doing nothing to rectify the situation. I was not happy and wanted to return it. I told him that whatever damage there was I would pay for it if I did it. It never worked properly when I got it and never has. I bought it on his word as a businessman and gentleman and got fucked. It never did what he said and does not look as clean as he said. You are also correct a big hammer is exactly what this piece of shit amp needs. It probably would improve it. How about a coat hanger in place of a dummy load.
The bottom line was. It never worked properly and I got no help until I complained on this ng.
Thanx for reading.
Randy

first let me say i've never once had any dealings with richard hale other than reading his spam on this newsgroup.

>Are you Richard or a friend of his ???

second i want to say a amp of this type if FAR from plug and play. you cant just go plunk down the dollars and expect to work like a solid state does. these tubes that it uses are extremly sensitive to mistuning. you could have messed up the tubes the first time you tested it if it wasnt tuned correct. since i can tell thru these posts that you know nothing about electronics youd be best not to invest so much money in something so easily damaged by and inexpereinced operator. this is not a sweep tube box that can just be tuned any old way and then ran hard on AM. if richard did indeed ship you the box in working order he is being VERY courteous in giving you a extra set of tubes because there not cheap to buy. so what if you put the tubes in and mistune those and burn it up? are you going to get on this news group and say he sent you bad tubes for the bad amp? i just find it real hard to believe a guy that has been on here selling as much as richard has with no complaints would all of the sudden turn crooked. the problem sounds like bad tubes, you dropping it was absolutely not a good idea but it just backs up the bad tube theory since it did indeed put out a littel more. maybe i could fix it, maybe not but for a person like you i wouldnt even try. youd be out here telling the world i broke it before you even got it back. next time buy a transistor base box, even a newbie can run one of tose as long as he watches his swr meter.

>
>C`mon Tim, are you telling me that I should be able to repair an amp that was
>completely altered from it`s original form ??? I shouldn`t have to do
>anything
>to this amp except plug it in. I told Richard I didn`t want the amp because
>it
>looks like junk and it is junk. I was told it was a 9+ on a scale of 1 thru
>10.
>That would be pretty friggin good in my book. I didn`t get anywhere until I

4436. FS Texas Star Mod V $75 Twin Cities, MN

Newsgroup: rec.radio.cb
Date: 2000-11-07 00:00:00 UTC
From: SwTempo <swtempo@yahoo.com>
Message-ID: <UmUIOhHm0vXkpEFDJAbiY1=aJbMc@4ax.com>
Source record: 58338

I have a "Texas Star Mod V" for sale. It's basically a modulator
that's capable of putting out up to 125 watts. Of course that will
depend on YOUR radio/antenna setup. For those who don't know, the "V"
in the name of this unit stands for "Variable power". The original
control for that has burned out, so I replaced it with a 3 way switch
that gives you a low, medium and full power setting.
Point you web browser to this address for a picture of this nice
little amp
http://www.texasstar.com/export/modvEX.gif

This unit goes for $125 new. I will sell this item for $75.00 plus
shipping if you live outside the Twin Cites of Minnesota. If you live
in the Twin Cities, I can meet you somewhere.

For those of you outside the Twin Cities. Payment options are cashiers
check, regular or postal money order and PayPal. Paypal would be the
easiest, safest and fastest way to pay and I believe you could use
your credit card.

Please email me if you have any questions.
swtempo@yahoo.com

If you want to build an amp the splatters all over the radio spectrum and sounds like crap, then this group can certainly help you out. That is the way they think amps are supposed to sound. If you want to build an amp that puts out a clean signal then you better stick to advice from the ham groups.

Leland you had better get your calculator out since you cannot use it or dont understand db ..

A stock ssb cb is rated at 12 watts pep so 2x the power is a 3db gain, and 4x the power is 6 db gain 12 watts x 4 = 48 watts pep. So my question to you is how is 300 watts only 6db more than the original 12 watts ssb? Maybe you meant 300 watts on am will give similiar distance as 12 watts on ssb?

Your theory means nothing to us. You are a gutless whinebag and you have proved this by dodging the posts that you were afraid to answer.
You are what is known as a nerd, pissbag, whiner, snitch, crybaby, tattletale, whodunit, wannabe cop, pussy, goodytooshoes, newbie, newboot, driveup, nocode and plain ole pain in the ass. I wish I lived a little closer to you I would by me a CB amp and sit in across the street and talk skip while you were watching Martha Stewart or Days of our Lives. There is nothing worse than someone who thinks they are better than the next guy. You really must believe this or you would not display your education on your call sign profile. I would not display my education because it was achieved for my own self knowledge, not anyone else's. The only way I share my education is by passing it along not posting it. I will tell you this though I came from the school of hard knocks and if you acted this way in my presence I would bend you over my knee and smack the hell out of you!!

Hello Sam,

As far as I know, the Grant is a decent radio. Try channel 38 LSB. That seems to be one of the more popular SSB calling channels for most of the USA and Canada. Conditions change, so you may hear people one day and nothing the next. This time of year the skip is fairly good, so you should be able to hear something if you listen for a while.

Regarding your antenna, it may be fine for local contacts, but if it is short then long distance conversations may not be as easy. You don't mention what type it is, but you could try upgrading to maybe a Wilson or a K-40.

Good luck and let us know how you get on.

Richard.
(please remove the NOSPAM if replying via email).

Information wasted? You have not posted one iota of valuable information to this ng. What you have posted technical wise you probably blatantly plagiarized from a book or site. I find it amusing you think that highly of yourself that all you have to do is make a claim and believe it to be true. Sorry Bub! Not in the real world. The burden of proof is on the one making the claim and you FAILED to produce. Call it anything you wish, all your smoke and mirrors won't change that fact.

"......any additional information would be wasted......"

That is your subconscious way of admitting defeat. When in doubt, attempt to confuse and belittle. When (and if) you actually learn some real technical ability and build an amp, take in to consideration time spent and parts cost. Then come back here and try your same argument. I'll agree with one thing, Leland. Any more time spent on this issue is futile. As the saying goes...put up or shut up!

Wasn't it not too long ago that someone in here made the claim that boxes don't bleed, antennas do? What is the skinny on that?

I don't know..there are a few here that I would trust to build a solid, reputable amp.

4449. Re: The amp I bought from Richard Hale "The Tube Man" Part II

Newsgroup: rec.radio.cb
Date: 2000-11-07 00:00:00 UTC
From: lzboyz@aol.com
Message-ID: <20001107170432.23498.00000157@nso-cp.aol.com>
Source record: 58351

Do you guys read my posts before responding ??????? Do the words "I WOULD PAY FOR IT IF I FUCKED IT UP MAKE ANY SENSE TO YOU ?????"
The tubes that Richard was to send me last week have not arrived yet. Do you hear me complaining about that ??? I`m not 100% sure that he sent them. I saw no reason to mention that.
Ok, Tim I don`t know a friggin thing about electronics. I don`t know anything about anything. You tell me how to properly tune this amp.
First I want you to take a look at the completely reworked amp that has a xsfmr in it that says 240 volt input and is wired for 120. Lets just say It must be putting out the correct voltage to run this amp and oh yea, the current draw should be no problem cause its a big xsfmr and I don`t know what it is rated at because there is no other writing on it and its bigger than the original.. The rust on the xsfmr should make it work better don`t you think. It has a nice reddish orange color to it. The paper that was used in it is dry rotted and falling apart. That shouldn`t hurt it either. The tube sockets don`t match the 4cx250b tubes. Hell I don`t know, but shouldn`t all the pins on the tube be connected to something. Oh shit, I forgot, there are no numbers on the tubes but someone has written 4cx250b on them with magic marker. I guess thats how the factory marks them ??? If you hang on I will find the fan that was bolted on the outside in my Grainger catalog manufactured by Dayton. I don`t know if this is normal, but I can`t hear my radio over the noise that the fan makes. I`ll just scream louder and buy a 100 watt mono car amp and hook it to the earphone jack so I can hear if anyone is responding to me. They call me the sweeper. The spots of rust under the deck don`t seem to be close to anything that matters. The duct tape that is used to hold stuff together looks like it is still in good shape. The broken cage around the xsfmr doesn`t seem to rattle. The wires that were burnt with a soldering iron are far enough away from anything to hurt it. Ok now, lets turn it on and see what happens..... Oh yea, no one knows what this pilot light is for in the middle of the amp and " we`re not sure if it works."
I`m going to be totally honest with you. I don`t know you Tim, and I don`t want to insult you, but I don`t think you can fix this amp. If I gave you the amp and you couldn`t fix it I wouldn`t complain about it. I`d take it somewhere else. If you can`t fix it, you can`t fix it. If you lie to me I`ll complain about that though. If you sell me junk, I`ll bitch about it. I don`t like being lied to. You have no idea what condition this amp is in.
The bottom line is this is a piece of shit amp that was sold as an excellent condition amp. If it looked like a good piece of equipment when I got it. I would probably think I fucked it up. That is not the case and I do not believe that I did anything wrong to it. And it`s still fuckin junk.
Thanx for reading
Take care
Randy

This whole thread is just one more example of why CB is not and was never intended to be a technical hobby, and why you should keep your hands out of things never intended for use on the band.

Uh Er, Doc,

You are WRONG! I work for the railroad (Norfolk Southern) and, if you were here, I could show you my BA6 Form that comes out once a year. I have almost 500,000 in railroad retirement between myself and my employer. NOW, if you mean I may not LIVE to collect that much, you might be right. However, I would take RR retirement ANY DAY over social-istic IN-security! The average monthly check is almost TWICE that of the non-railroad retiree. In other words, if I could retire today, I would take home within $200 of what I take home after taxes WORKING. When you subtact the expenses of commuting, it would work out to more. It's one of the reasons I chose railroading as a career--to get out of paying into that farce of a retirement system--socialist insecurity.

Sir,

That smart aleck answer was NOT necessary. Did the person say anything about doing anything illegal? NO! Did he say his radio was modded? NO! Did he say anything about ANYTHING illegal? NO! He asked a perfectly legitimate question. The reason for his rig not working as needed could be a number of things. Your comment was only a reflection on yourself! Besides, if he asked the same question TO FCC, they just might, if they have time and you get a really nice person, they probably would try to answer his questions. So THERE! GRRRRRRRRR!

Jerry

How about we all stand back a few feet and take a deep breath.

Linear design is covered pretty well in the 13th chapter of the current Handbook even if the projects suck swampwater. Keep a few things in mind:

1. No amateur linears are designed for Ancient Modulation. Even experienced hams have no clue about Antique Mary. If we ever had anything to do with it, it was as high-level plate modulated Class C (and I mean the 90-120 degree, grid-leak biased variety, not Profs 178 degree specials) so, for example, I missed the point about tuning made on this group.

2. Amateur linears are typically designed for multi-band use. Not only does this mean some fairly complex band switches, it also means paying attention to oddball resonances both for parasitic control and parts (like RF chokes) that can often be self-resonant within the range of use. Even broadbanded rigs may switch filtering; most require a good antenna tuner.

3. Amateur linears are typically driven with transceivers with more than adequate drive power which require things like Automatic Level Control (ALC) and tend to dictate such designs as grounded-grid Class B operation. This is not the usual CB situation and few transceivers have anything resembling ALC. Unfortunately, they do not make such things as linearity monitoring exactly easy. Even though doing 4 watt RMS, 12W PEP to something like

400/1200 is a solvable problem, it is just not a problem most amateurs have had to solve.

4. For the reasons mentioned above, mobile operation is far more significant on CB so solid-state amps, theme and variation on the VHF amps pioneered by Motorola, abound. Where these broadbanded amps are used it is important to pay attention to the antenna circuitry. At VHF, isolation of various kinds is required or one has created one of the world's great broadband mixers. At HF, a first-rate low-pass filter is dead minimum. So long as any amp manufacturer is allowed to state power without one in the line, it is all bullshit.

There are indeed ham groups that will pat you on the head and tell you to go away. Partially, of course, this is to keep the crap level down but mostly it is a simple case of not having the experience to have a clue.

5. The unfortunate fact is that CB amps - like bathtub gin and Meth or any other illegal product produced in sheds, garages, and basements under a prohibition - tend to be produced by fast buck artists rather than engineers. Watts per dollar is the whole name of the game. And in fact the users tend to be of the same mentality so just who is the gyper and gypee is not immediately apparent. Neither one gives a rusty hoot about linearity or spectral purity so it is hard to fix blame.

In the usual course of events, technical people tend to earn ham tickets along the way. Don't confuse the reaction of hams who are clueless with the technically competent who do not wish to redesign a major piece of junque one problem at a time.

Hello Gary: SSB CB rigs have been around since the early 1960's. There
nothing wrong with them.

Whats the ARRL got to do with anything here. You said contact the FCC?

Not a real friendly response, ah!

Gary wrote:
>Maybe you could ask FCC? Please make sure you attach your name and >address, they'll be glad to assist you.

I purchased one of these SuperStar 4900B radios from a mail order company. The unit was defective right out of the box. On power up the unit would make a steady click noise, then after a few minutes of operation a noise similar to popcorn popping would fade in and out. It would make these sounds irrespective of control settings...and it would also emit them on transmit.

If the LCD brightness control was adjusted to minimum, the popcorn sound would reduce, but the initial click noise would remain no matter what.

The people who sold me the radio stated to me that ' If ' my radio is really defective, then this would be the very first one. Considering that these radios are manufactured by Ranger, well known for their hit & miss construction, i find that hard to believe.

After i sent an e-mail complaining about the radio and told the company i wanted to return it, they asked if i ' knew what a restocking fee was ' I took this to mean that no matter how much is wrong with the radio, they are going to inspect it and proclaim it ' perfect ' This, so they can keep the 15% of my money. Hopefully, this scenario will not materialize, and i will receive a full refund including my shipping costs.

I did have the presence of mind to record the sounds of this radio malfunctioning into a computer that i will provide a link to if needed.

Answer this with true honesty. How many times have you had a CBer splatter on you due to a trashy amplifier?

I am not saying that the "CB" amps are not harmonic rich trash amps. But answer the question with true honesty. Do not proximity or overload as an example as this could happen with any class of RF amplifier.

Just curious on the origin of these terms:

a) What is a maul ?
b) How is it dropped ?
c) What is a mud duck ?
d) What is a duck (non mud)?
e) Why is channel 6 called the bowl (or superbowl) ?
f) What is checking the mail ?

Not trying to start anything.....just curious as to where, how, and why this stuff got started.

Well they should be turning red evenly, it sounds like the tube that is getting red faster is the bad tube. Also three 3-500z should not be doing 5300 on a Bird, this is baaaaaaaaad. 3000 dead key max and even that will compromise the life of the tube.

How much are you driving it with?

KRS

a maul is that thang that gets put on your ass daily every time you key up
that Kraco radio of yours.

> b) How is it dropped ?

usually right across your forehead till the taste of duck feed gets slapped
out your mouth.

> c) What is a mud duck ?

Look up Ken in the dictionary and you will see a very good picture of one.

> d) What is a duck (non mud)?

that was you when you first started out on the radio and very well could
still be you today.

> e) Why is channel 6 called the bowl (or superbowl) ?

Thats where the heavy hitters in the world get in there and mix it up.

> f) What is checking the mail ?

Thats were once a day a guy in blue comes buy your house(except for Sundays)
and put envelope in that square tin thing in front of your house, or in your
case shed.

Big setup but it is not worth the effort to put up the
second antenna. The spacing between the two is
so short that it negates any real gain.

Hi Richard. You might try turning off your talkback (by way of turning your echo off) and see if the squeal goes away. I guess you'd have to have another radio to listen to to see if the squeal is gone or not.

I had a squeal problem sort of like that with a little uniden 520xl when running into a 2 pill amp. Didn't happen on the low power setting but squealed away on the middle and upper power settings. Never did find out why that was - I don't use that setup anymore anyway. You're not running an amp behind there are you (for test purposes)?

-Toby

Hi,
I have been reading this newsgroup for a few weeks and I would like to ask a few questions. I recently bought my first SSB radio, a factory refurbished Grant XL. The AM works fine but I have yet to have a conversation with anyone else using SSB. I think the radio is working because I can sometimes hear AM transmissions while listening in USB or LSB. I wonder if I am doing something wrong?(I read the manual that came with the radio. It seems simple enough.) I am currently using a my cartop antenna and I have cheked the SWR. It is around 1.75. Is this just not a sufficient antenna? Should I have the radio checked? Is it possible that noone in Southeast Tennessee uses SSB? Any ideas?

CB on Fire

So you are a CB operator and you want to be part of the biggest pile up. Well there will
be a total of 3 rooms - meaning 3 channels - that will be the XMAS Cb party. If you have
a CB radio - then you are in. Regardless of where you are..you are welcome to
join in. In fact we are hpoing to launch a website featuring World Class CB
operators..so you want part of the action - then email For full details -

email me: seanb@attcanada.net

Thanks

Sent via Deja.com http://www.deja.com/

Did you answer my question, "Train"? Is it ok to use ssb on U.S. cb's, and
on which frequencies? Do you know? Maybe you could tell me? If you please?
Judging by the number of pirate U.S. cb stations heard HERE IN EUROPE
(forgeot to check my callsign did you?), they're free to use ANY frequency
with ANY power and ANY antenna! Maybe ITU has given them special rights CB
elsewhere don't have? Do you copy??? Gary

From: Skipp catches a whopper of a tale <skipp@pilot.ucdavis.edu>
Message-ID: <8ucben$93e$2@mark.ucdavis.edu>
Source record: 58403

: Don't know where you got the 33% and 66% numbers.I have a couple 811A amps and
: DC input power is alway equal to RF out. This means they are running at 50%.
: Yes I push mine a bit beyound this too until I hear the distortion then back
: off and I know I am running at better than 50% when I do it. I also know the
: amp is not being run linearly anymore. A class B 811a amp runs about 50%
: efficent as long as it is with in its operating parameters no watter what the

Wow..! where does one start with all that above..? input power equal to
output power..? Then he drives the amplifier till he can hear
distortion..? Oh my god I'm glad I don't live in the same town as this
joker. His class b amplifer runs 50%, reads like he took that right out of
a book somewere.

: drive. So does every other B class tube amp I know of.. If you actually do get
: efficiency higher than 50% you are pushing the tubes beyond their linear region
: of operation. You can do this and get away with it but dont say this makes a
: linear amp 66% efficient, it is not operating linearly when you do this. It is

All pretty much wrong and a bad batch of technoblather.

: also wrong to measure amp efficiency with a modulated signal. Should alway be
: CW. If you can understand what you are doing by using your own methods,fine,
: but expect the rest of the world to tell you that you wrong and don't complain
: when they do.

I'll tell you to yank that dirty amplifier off the air until you learn how
to run it right. How about picking up a copy of an ARRL Handbook and
getting some better information under your belt.

: Bottom line: If the efficiency of an amp changes with drive level then it is
: not linear.

No amplifier made has linear gain. If you find one, let me know.

cheers
skipp@pilot.ucdavis.edu

Hi,
If you use the inside knob on your clarifer and put it in the 12o'clock position and use the outer knob to tune in a station you want to talk to you will be right on there frequency and they will be right on yours if you are talking SSB. When i set up the transmit of a SSB radio i inject a 1000HZ tone into the mike and set the LSB at27.4040 and USBat27.4060 and the radio will be on center freq for channal 40 AM would be 27.405Mh

But the problem is that no one on channel 6 actually says anything that can be understood... it's like jibberish yelled over and over and over and over... and is often heard a number of channels above and below due to the 1 or 2 kw amps being run from the Suburbans with two coil antennas on the roof...

What fun is hearing someone you can't understand?

i can understand them, and if there only running one or two kw then its just the driver. not everybody likes working ssb low power with a dipole on the fence.

LZboyz, this is probably the best medium available for you to post your experiences. It lets the world see who is worthy and who is not, and the public can decide for themselves who that may be.

Hi,
Anyone know how to pull the 11 meter band out of one of these radios? Any help here would be greatly appreciated. Take the 1 out of me email address if mailing directly.

It is quite hard to equalize or balance 3 of the z tubes, thats why 2 is
prefered ..
5300 is a good number yes it is shortening the life of the tube , but so
does drinking and smoking on us ..

4531. Ch 20 Monday night

Newsgroup: rec.radio.cb
Date: 2000-11-08 00:00:00 UTC
From: "R.J." <silviaracr@mobile.att.net>
Message-ID: <%ylO5.8921$2j.3604@newsfeed.slurp.net>
Source record: 58438

Monday night from about 23:30 until I went to sleep at 03:00 there was nothing but a solid deadkey here in PA. Local comms were wiped out. There was no skip noise on any channels. To me it sounded like someone testing new equipment. It may have been my head, but after listening for quite a while I could swear you could hear a slight drone of a fan, but other than that it was dead quiet. Did anyone else hear this or was I being contacted by aliens?

4532. Palomar Linear amp

Maycom builds all kinds of stuff, and supplies it to different brand
companies. Zodiak and Cherokee are two others off of the top of my head.
In other markets the Cherokee CM-10 is a Zodiak and has FM capabilities.

If Dave was to get on here and say that I wouldn't have posted a disagreement. You are just a DaveMade user. I build EVERYTHING in and on my truck and none of it in anyway resembles a Davemade anything. I have beat 99% of all of the davemades I have ever keyed with. I know Dave is a sharp guy but I do not need to copy anything. The designs we use work just fine. I can make these claims from experience, can you. I used to give you respect. But now I have none and this is all because I said I was tired of hearing people cross out 123. I have to tell you this the guy was always nice to me. I never gave him a lick of credit for any amps he built. But now you start this open your eyes thing, well I have and if your ever in my neck of the woods running something you designed I might change your whole attitude about it being a Davemade world.

That could be true, but Maycom is silkscreened on the printed circuit boards inside the unit. The AH-27 Cherokee has Maycom silkscreened on it's pcb for example.

In this case, the SS4900b has Maycom silk-screened on the main board and Power supply PCB. They also make a 11 meter only unit; the BS-27. The SS4900b can be configured for AM only, AM/FM only, AM/FM/USB, AM/FM/LSB, export or Ham use by setting the internal option jumpers and doing a CPU reset. It is a versatile rig. It also has provisions for discriminator out, direct audio in and remote keying via the Packet header on the main board. A 2 pin header is also supplied for using an external analog S-Meter.

Enjoy,

David

After all the whining about the West Palm voters not being able to read, no one is mentioning the Jacksonville residents who registered via DMV (Motor-Voter) whose registration didn't get processed and therefore weren't able to vote. Jax is Bush territory. Guess that is why the media "embargoed" that bit of info. We have used the "butterfly" ballots here before with no problem. There should be some responsibility involved in the right to vote. The leader of the pack protesting her vote in error for Buchannan can't even pronounce it (hell, I probably can't even spell it, but I knew the difference between the arrows pointing to the candidate I was voting for)

Some kind of In-DUH-Viduals here..... The media loves 'em, 'cause they can't think for themselves.

It is a hard fight to defeat a candidate who is the incumbent, has all White resources behind him, as well as the media. Kinda like a 3 on one brawl..

Folks should take notice of Bush's resolve. I have more respect for him coming out of the election than I did going in after the primary.

Hook it up via the 12 VDC connector and try it. Sounds like a bad power supply. The radio is made by Maycom, not Ranger.

Dave,

They are made by Maycom. Open one up and look at the silk screening on the main board and power supply board. Make sure to remove all 4 of the cabinet side feet and the carrying strap before trying to remove the cover......

4541. SWR and a question

Newsgroup: rec.radio.cb
Date: 2000-11-08 00:00:00 UTC
From: ADAM154@webtv.net
Message-ID: <26870-3A09FAD8-63@storefull-217.iap.bryant.webtv.net>
Source record: 58448

I have a Uniden PRO 520, a Wilson "Lil' Wil" and a Radio Shack SWR meter:

A. In order to check SWR, is there anything in particular I need to do, like parking away from buildings or other cars? Would having the doors open affect my reading?

B. The antenna coax was damaged -- I spliced it back together with a coax connector. Will this affect the SWR reading or overall performance?

C If the answer to B is yes, would it be worth the effort to replace the coax? (No, please don't tell me to get a better antenna either. A 1000 just wouldn't fit in the budget right now.)

The antenna is like new, and I woud hate to junk it for that reason alone.

I have never really used the radio much until recently. The splice seemed to work for receive only. I just don't want to take any chances -- before I try to transmit with this antenna.

I'm not totally new to CB, but defintiely not an expert by any means. (I'm more of a scanner and VHF two-way "freak.")

If anyone can give me any advice, please contact me OFF the list, as I don't come here much.

THANKS!

Adam Lauterbur
Piqua, OH

Maycom...thats interesting. I read on a website that Ranger makes SuperStar, thats where i got that information.

I do not believe that the company sold me a defective radio on purpose...and of course they did not make the thing. But, they did sell it to me and are therefore ultimately responcible for making things right. I do not think that radio outlets should make money selling defective units by pretending they are not defective after they receive them back for evaluation.

Hopefully this company will not try this tactic...but i had several hints they might.

They will get the unit back on thursday or friday...i will post the results either way.

You are correct that Ranger makes some Superstar radios. It is easy to get misled and confused in a market that constantly steals each others so called "Trademarks".

Another fine example, although a little bit different situation, is the Cobra brand of RF amplifiers. They even have the Cobra snake symbol on the front of them. I'm sure that you know better, but I have actually had people come into my shop wanting to buy one thinking they were made by Cobra. (Duh!) They try to argue with me and tell me things like; "Cobra would sue them if they did that!" and then they look at me like I am stupid! What CB amp company gives a damn whose image they steal? They are making something totally illegal for sale in the U.S. anyway!

Sorry 'bout gettin a little off the topic!

Source record: 58451

Greetings!

A good idea, but be careful - the S/S whip can take it, the brass threaded section holding the stem to the plastic may not. The chromed cap that allows the whip to adjust puts a lot of pressure on the brass threaded portion going into the coil from the top.

Since it uses set-screws, if you use the idea of bending the whip up to make it upright, use a thread-lok on it once the SWR has been set to keep the whip firm in position - otherwise it may rotate around and you don't want that.

On Wed, 8 Nov 2000 18:29:35 -0500, while the modem was pondering it's navel, "Speedbuggy714" <galaxy1@zoomnet.net> dissertated the following:

:+> You can put a bend in the whip right after the load to make it
:+> stand straight up.....

Source record: 58452

Adam,
It's better to park away from things, cars, buildings, etc,
when checking SWR. Leaving a door open can affect SWR too.
You have to use a little common sense whith all this, you can't
go looking for an empty parking lot to check SWR all the time.
If the 'splice' was done correctly, it shouldn't make any
difference under the circumstances. And, unless there are other
reasons, there's no need to replace the coax.
'Doc

Jagzilla,
If you mean can you convert an '830 for CB use, yes, you
can. I don't think it would be worth the effort though, and
you ruin the re-sale value.

Punisha,
Yes, it means one tube is 'working' harder than the other two
for some reason. Why? Who knows with out taking a look at what's
happening. With the 5300 watt output, you have a problem some where,
three 3-500z's just won't give you that kind of output unless they
are being used out of the tube's specifications. When you do that
you are not operating the tubes linearly and are bound to sound like
crap. But it's your amplifier and your signal, do what you want.

Over the past few months... I have had numerous people email me about the speech processor I designed some time ago. I have only given you some details but have never really posted the finalized schematic for it. This processor is based on the Analog Devices #SSM2166 chip. This is a "real" speech processor chip and details can be seen at www.analog.com

Within the next week... I plan on drawing up my schematic and posting it here. This processor works great and is fairly simple to build. Unfortunately... this circuit was designed with a condenser mic as the source. I have easily retrofitted such a mic element into an existing Cobra mic housing without any problem. You have no idea how clear this mic sounds. It sounds better than any dynamic or ceramic mic out there... period! With the "noise gate" feature of this chip... you can get fantastic compressed audio levels without any background noise. Try that with any power mic... lol
Due to the large gain involved in the circuit... I don't recommend using an amplifier with it. The large RF fields surrounding the set/mic with such a setup don't play well with high gain audio circuits and have a tendency to oscillate. However... on a 5W rig... it's the ticket laddie!

Source record: 58457

You are wrong again.

Class I railroads are private corporations and have NO connection to the federal government other than paying taxes just like other companies. Where this myth/lie got started was with the collapse of Penn Central which the government bailed out. For a time this corporation WAS owned by the fed. They eventually sold it off and it became a private company as well. Two years ago, this corporation was bought by two major US railroads, those being CSX and Norfolk Southern. The part formerly known as New York Central was roughly the part purchased by CXS, the part formerly known as Pennsylvania Railroad went to NS. The ONE railroad that was owned by the fed was Conrail. There never has been a takeover of US railroads, never been a time when ALL railroads were "owned" by the fed. This is a stupid misconception/assumption by uninformed people.

BTW, the Railroad Retirement System is solvent, basically self-supporting, and in no need of "fixing" like the socialistic in-security system. Incidentally, this is because railroad workers pay much more into it, and this input is matched by the employers--again having NO connection to the federal "guv-ment". Get your facts straight or talk to someone in the railroad industry before making dum pronouncements of which you have no knowledge or experience.

4555. tunning antenna

Newsgroup: rec.radio.cb
Date: 2000-11-08 00:00:00 UTC
From: christopher <chrism@centurytel.net>
Message-ID: <sgqO5.5076$T6.1162688@feed.centurytel.net>
Source record: 58462

oh yes, the nightmare for everyone: the antenna is too short!!

ok, i have a cherokee CM-10 ten meter cb (the ones the cops all use) i used to own a car, but unfortunately that car had a encounter with a 75 pontiac and is not too happy. so now i went out and bought a ford ranger. well...we had cut the antenna shorter for the subaru to get it tuned, the ranger needs it longer. knowing some about tunning antennas i went out and bought two coax extensions for the antenna and hooked them up. this got the antenna unbelievably well tuned (both channel 1 and channel 40 were between 1 and 1.1, extremely well tuned) so, in triumph i coiled my coax up and stuck it under my dash. doing one last test i discovered that after coiling the cabling up not only was it out of tune, but it was so bad that i would have damaged my cb had i run it with it like that. after moving the cabling around for a while i discovered that it was the fact that i had coiled it that caused it to do this. well after much frustration and 5 hours work i have managed to run all that extra coax all over my truck and now it is well tuned

what i would like to know is what caused this (obviously interference from the cable itself, but i would like to know what caused this interferance and if it is normal) and how can i fix it other than wiring my entire truck?

4556. a whole new world

Hardly... in fact I'm finishing up an order for two of the improved
"Intruder" amps I build. Although the SkyWave design worked well... it has
been replaced by the new design that has unmatchable performance for a
2pill. I also make a limited amount of 1pills for selected people. This is
my "masterpiece" and the ultimate in solid state amp efficiency.

I hope you fall off that dilapidated old motor bike again so they have to
cut off your other testicle.
I'm going to have to start calling you 1pill... lol

Tim, I apologize to you and everyone else who may be reading this. I went a
little off the deep end. I`m embarrassed to say how much I paid for this amp.
Lets just say I paid WAY too much for it. The amp is in very poor condition and
I did not include everything that is wrong with it. You would have to see this
amp to believe it.
I`m going to drop out of here, take a couple of steps back, and figure out what
to do next.
Take care
Randy

4570. Re: The amp I bought from Richard Hale "The Tube Man" Part II

Newsgroup: rec.radio.cb
Date: 2000-11-08 00:00:00 UTC
From: lzboyz@aol.com
Message-ID: <20001108082523.29032.00000205@nso-bd.aol.com>
Source record: 58560

Wild Bill, I apologize to you and everyone else who may be reading this. I had to get away from this and get my head back on straight. You are correct. I am not a happy camper. I have a person who is willing to look at the amp. Neither of us are sure he can fix it. I am willing to take a chance on it though. I was told this amp will run either 250 or 350 tubes. I`m going to buy a set of 250s from RF Parts and drop off the amp and let them hook it up and see what happens. It ain`t lookin to good to me.
I have another option on the repair work but it`s 500 or so miles from here and I know for sure he can fix it.
Thanx for reading
Take care
Randy

> Can anyone point me to where I can find the actual frequencies for CB?

There are millions of 'em.
Try http://www.geocities.com/rf-man/cb

- it's 26.965 to 27.405 MHz for USA AM.

MegHz

Sent via Deja.com http://www.deja.com/
Before you buy.

4572. Re: So long Davemade, Xforce, etc.

JR, I have many radios and only a few receive bleed like you describe. Matter of fact, I can be getting wiped out on all 40 by someone within, oh, say 30 miles, give or take. BUT, I NEVER, repeat, NEVER had anyone wipe me out on 10 AND 11 from across the country. A few adjacent channels bleed, yea, but even the biggest of them all I cannot hear if I switch bands. I'm curious, what type radio you are operating that has such poor rejection, if that is the case? Antenna? You got me curious as to the type of bleed you describe. I have had folks key up megawatts within 2 blocks of my house on 11 meter. I drop down a band or two and all is golden silence.

4573. Re: If anyone cares I`m still alive

>Can anyone point me to where I can find the actual frequencies for CB?

Frequency - User
25.670-26.100 - Broadcast remotes
26.617 - Civil Air Patrol (CAP)
27.430, 27.450, 27.490, 27.510, 27.530 - Business
27.870, 27.920, 27.974 - US Navy-MARS
28.000 -29.700 - 10 Meter Ham Band

Frequency Allocations in the 25-30 MHz Spectrum
Below is a list of legitimate and authorized users
of this spectrum. If you are a freebander it is
recommended that you do not interefere with these
communications or operate on the frequencies in use.

4578. SSB Offset question and Superstar 3900 clarifier question

Newsgroup: rec.radio.cb
Date: 2000-11-08 00:00:00 UTC
From: Jagzilla <jagzilla@stones1.com>
Message-ID: <iUdO5.124741$47.1852553@news.bc.tac.net>
Source record: 58568

HI,
When you are on ssb, do you transmit on the same frequency whether it's upper or lower sideband, or even am for that matter. What I mean is there some sort of offset for upper and lower ssb? Say you were on channel 40, 27.405mhz. What should a frequency counter show for this channel if you were on upper side, and lower side? I know a radio like a 2950 would not change, or a radio like a Yaesu FT840(both of which I've owned), no matter what mode you are transmitting in, on the frequency counter. But now I own a radio with an external frequency counter, and I notice things do change as I change my mode of transmit. Is this normal?, and can someone tell me what the offset is, if there is one? Thanks in advance for any help here?
Also, while I'm here, had anyone opened up the clarifier on a Superstar 3900 (the new model out)? If they have, has there been any problems afterwards? I'm especially interested to know if the radio started "warbling" or any other sorta bs with the audio. I was told that opening up the clarifier on this radio was hard on the pll chip, so I want some feedback on this before I make a decision as to whether to do it or not.
I also will say that I picked up one of those cheapo Superstar 3900's that are out now...chrome face, single final, turbo tuned model, and I gotta say I'm really happy with it! It's my first export radio and I am impressed. It's on freq, stable, good receive and fine audio reports on it.Really can't bitch for $149.00. It will make a fine addition to the RV!!

Jagzilla

>QUOTE from Bendthelite:...."Considering that these radios are manufactured by Ranger, well known for their hit....."
THE radio is NOT made by Ranger, it is made by Maycom, & can be seen on their website with their name on it for sale overseas.

When da Chain letter ponzi scheem called "Socialist Insecurity" comes near it's end of it's chain letters, you old hippies that were "working on the railroad all the livelong day" will definately see yo pensions go into that chain letter HOLE. BUY your dream CB now from me or whoever, because later, yo won' have da $$$ to buy it! Also, if we get GOREd, then you won't get it either!!!! I'm proud to vote in TN against Gore. He didn't even carry his own state! Maybe people here KNOW.....! Or maybe it was because of the "SWING" or dead key votes of Dave or Debby that did it !!!!!!!! (it was a 100% Mod. swing of my foot that kicked that earth worshipping COMMUNIST (it is not dead) out of TN. By the way, the organization that does NOT exist (The Commy party USA) endorsed Gore!!!!!!! Are they dead or is we?
Dave!!!!!!!!!!!!!!!!

Jerry Oxendine wrote in message <3A089E1A.49B9@bellsouth.net>...
Uh Er, Doc,

You are WRONG! I work for the railroad (Norfolk Southern) and, if you were here, I could show you my BA6 Form that comes out once a year. I have almost 500,000 in railroad retirement between myself and my employer. NOW, if you mean I may not LIVE to collect that much, you might be right. However, I would take RR retirement ANY DAY over social-istic IN-security! The average monthly check is almost TWICE that of the non-railroad retiree. In other words, if I could retire today, I would take home within $200 of what I take home after taxes WORKING. When you subtact the expenses of commuting, it would work out to more. It's one of the reasons I chose railroading as a career--to get out of paying into that farce of a retirement system--socialist insecurity.

Jagzilla,
No matter the mode (AM,SSB,FM) the transmit frequency
is the same, there is no off-set. Channel-40 is still
the same frequency 27.405 Mhz. Don't bother trying to
use an ordinary frequency counter to determine SSB frequency,
it won't work. There's no carrier, and the freq-counter
tries to follow the audio frequencies.

> dont understand db ..

What appears below is a copy for a prior post which apparently you did not read, or understand.

An AM radio connected to an amplifier is a huge waste of power, money, and spectrum space that on 11m is in short supply. I did some quick calculations to see the numbers for myself. Lets use an example of a 300 watt linear. The way I see it for an undistorted signal 300 watts output is the maximum. For a 100 percent modulated signal half of the power found in the carrier is in both sidebands. So at 300 watts of output that would be 200 watts on a dead key, and a swing to 300 watts under full modulation. That now leaves 100 watts in BOTH sidebands. ONLY one sideband is really needed so we can drop half of the calculated sideband power, which now leaves us 50 watts. Now if we do some more math (10*log(50/12)) we find the SSB power is only 6.2 db (about 1 "S" unit) down from what could be done by a stock CB SSB rig, if it was connected to the same antenna as the AM rig, WITHOUT an amplifier! Seems like spending so much money on a linear, only to use it on AM is a bad joke at the AM operator's expense. The guys selling these things to AMers must be laughing all the way to the bank. Of course it looks cool when you make that little needle fly way up scale, until you figure out that's what almost all of your money, and power, is doing, just that - making that little needle move.

4591. Re: SSB Offset question and Superstar 3900 clarifier question

Newsgroup: rec.radio.cb
Date: 2000-11-08 00:00:00 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <grui0tk4kkm9dksclapmgj43p52ve5m64b@4ax.com>
Source record: 58581

Greetings!

A lot of times, radios that have the frequency display, are not true frequency counters, it's embedded in the ROM programming. The ROM simply displays the frequency and is not interactive with the actual frequency the radio may be generating.

As far as an SSB "offset" - there is, but it's the filter itself that takes care of this in the audio section of the radio.

The filter removes the carrier and opposite sideband. Usually this rolloff is about 2.5KHz wide. So audio bandpass starts around the 2.5KHz mark on either side of the carrier - or center frequency.

Since the filter removes a given area of audio embedded IF spectrum, it can be used to "notch" or attenuate, or act as a band-pass to allow a range of frequencies thru without attenuatintg them. [hence the audio IF and why the Xtal is centered around it - usually 16.75MHz or 11.2751MHz for example - not all radios use these Xtals or crystal frequencies for their audio IF]

It all depends on how the radio is designed to work with them.

In regards to the 3900 - the open clarifier is tricky and many mods suggest that you can increase slide by taking a wire from the clarifier pot to ground, and jumper a diode, it's a no-no for stability reasons. You also increase the "drift" of the radio and makes the clarifier temperature sensitive by doing this. Not good for mobiles in frigid weather or high temperature extremes - e/g 20 degrees F to 80 degrees F as found in typical mobiles on a winters day...

The best method is to simply Unlock the clarifier and leave it alone, the drift is a lot less and the radio won't warble on you even under heavy modulation.

The warble you're concerned about is due to the slide mod that makes the Varactor diode controlled by the pot, much more voltage and impedance sensitive - making the problem a lot worse if you go beyond the intended range of impedance. The VCO looks at the voltage from the pot as a source impedance - if you go too far out of range just to get more slide - the clarifier "scrunches up" and the linear taper it has is no longer linear, from the varactors point of view.

Hope this helps...

> You are what is known as a nerd, pissbag, whiner, snitch, crybaby,
> tattletale, whodunit, wannabe cop, pussy, goodytooshoes, newbie, newboot,
> driveup, nocode and plain ole pain in the ass.

You know when somebody has nothing to refute a point when language like the above is used. In fact, now that I think about it, this is the exact same attitude and languge I have heard used on all 40 CB channels. You want to know why 11m has turned in to such a cesspool, well just look at the kinds of people that populate that band, starting with yourself.

> I wish I lived a little closer to you

You don't, so keep wishing, maybe some day I will move in next to you.

> I would by me a CB amp and sit in across the street and talk
> skip while you were watching Martha Stewart or Days of our Lives.

I don't have a TV, too busy taking classes and going to the gym for a work out. But yea, an amplifier would be good. I will just talk to my brother, who is also a Ham. He has a friend where he works with connections to the Detroit area FCC field office. My brother's friend's dad was the head of the Detroit FCC field office until he died. My understanding is he still has connections there however, so I would assume they would be happy to pay you a visit. The FCC likes to get good exposure, in the press, by busting dumb CBers running power, and messing with peoples TV's, radios, phones, and so on. 8-))

> There is nothing worse than someone who thinks they are better than the
next guy.

What is even worst is somebody who feels the law does not apply to them, and insists on ignoring the law. That's why we have jails.

> really must believe this or you would not display your education on your
> call sign profile.

I'm not they only one to have done so. There is nothing preventing you from going to college and getting a degree either.

> I would not display my education because it was achieved
> for my own self knowledge, not anyone else's. The only way I share my
> education is by passing it along not posting it.

That's called work experience, and there is nothing that prevents you from
getting a web page and posting it there either.

> I will tell you this though
> I came from the school of hard knocks and if you acted this way in my
> presence I would bend you over my knee and smack the hell out of you!!

If you have any kids, and treated them as you suggested above, in most
states that would be called child abuse. You could end up in court, and
possibly in jail if convicted.

4597. Re: SSB Offset question and Superstar 3900 clarifier question

Newsgroup: rec.radio.cb
Date: 2000-11-08 00:00:00 UTC
From: sideband <sideband@cac.net>
Message-ID: <qq2j0tojopkhe13nrgil4a5qg1svff4dra@4ax.com>
Source record: 58587

The 2950 has a frequency display, not a counter... That's why it
doesn't change.

-SSB

On or about Wed, 8 Nov 2000 06:58:59 -0800, "Jagzilla"
<jagzilla@stones1.com>, using the forum rec.radio.cb did say:

:HI,
: When you are on ssb, do you transmit on the same frequency whether it's
:upper or lower sideband, or even am for that matter. What I mean is there
:some sort of offset for upper and lower ssb? Say you were on channel 40,
:27.405mhz. What should a frequency counter show for this channel if you were
:on upper side, and lower side? I know a radio like a 2950 would not change,
:or a radio like a Yaesu FT840(both of which I've owned), no matter what mode
:you are transmitting in, on the frequency counter. But now I own a radio
:with an external frequency counter, and I notice things do change as I
:change my mode of transmit. Is this normal?, and can someone tell me what
:the offset is, if there is one? Thanks in advance for any help here?
: Also, while I'm here, had anyone opened up the clarifier on a Superstar
:3900 (the new model out)? If they have, has there been any problems
:afterwards? I'm especially interested to know if the radio started
:"warbling" or any other sorta bs with the audio. I was told that opening up
:the clarifier on this radio was hard on the pll chip, so I want some
:feedback on this before I make a decision as to whether to do it or not.
: I also will say that I picked up one of those cheapo Superstar 3900's
:that are out now...chrome face, single final, turbo tuned model, and I gotta
:say I'm really happy with it! It's my first export radio and I am impressed.
:It's on freq, stable, good receive and fine audio reports on it.Really can't
:bitch for $149.00. It will make a fine addition to the RV!!
:

I've got one of these radios myself. As for the clarifier, you shouldn't need to do any type of mod to it. The clarifier already "slides" far enough to cover any freq between channels except for the 5 "A" channels in each band. The outer knob changes both tx and rx freq so you can use this to slide up to 5khz each way (actually closer to 6khz). As for the "A" channels you can add a +10khz switch quite easily to gain access to the 5 extra channels per band.

I'm just guessing here, but by the price he mentioned and the "turbo tune" I'd assume he bought this radio from exportradios.com and also has the Texas Ranger FC-390 freq counter with it which is actually hooked up internally but is plugged into the back of the radio. if so, his freq counter will read actual freq in tx and rx regardless of mode.

It has nothing to do with adjacent channel rejection or front end overload. It is because these idiots running their splatter boxes are putting out spurious emissions that fall within the 10 meter band. Just yesterday I was in a contact with another station and we had to move a few kHz because there was some idiot on 11 meters whose spurious emission was falling on our frequency and was strong enough to interrupt our contact. As far as the quality of my receivers, if you have a clean signal you can fire up as many watts as you want a few kHz away from where I am tuned and I won't hear you. My receivers are tube type and are much better in the rejection and overload dept. than the current jap crap..

twistedhed@webtv.net wrote:

It happens almost any time 10 meters is open. There are those high power idiots that you can follow their splatter all over the band and it isn't due to close proximity or receiver overload as the signals are not strong enough to overload, it is simply splatter from a trashy amp.

I would not exactly call a Collins S-Line and Collins 75A-3 exactly trashy receivers, they have better overload characteristics than your yeasu.. It has nothing to do with the receiver, it is the spurious emissions being broadcast by these cb idiots.

Were you able to put me on your kill list? Whoa, heavy! So, if European assholes come to illegal frequencies, do you think we hams respect and like them for what they do. I see you U.S. CBers are just the same as the ones we have here. Why don't you start using the local FM stations frequencies for CB communication - while you're at it? You guys give me a belly laugh. (notice that LEGAL CBers are entirely a different thing, they're okay!)Gary

They were just looking for something to put him away on. That's normally how the FCC and other government agencies work. That will make sure that when he gets out... he will be a convicted felon an if they catch him making amps again... they will throw away the key. This method is normally very effective in curbing the undesired behavior.

4641. Re: CB Frequencies

Newsgroup: rec.radio.cb
Date: 2000-11-09 00:00:00 UTC
From: oh8mfh <oh8mfh@hotmail.com>
Message-ID: <8ue83b$6s1$1@news.kolumbus.fi>
Source record: 58498

So the USGOV stands for any CB station in the U.S. ??? e.g. 27.555????

Actually, we don't get excited at all..we are quite bemused by such type mentions...remember, we are NOT laughing with you..we're laughing AT you!

4644. Universal Swing Mod

Newsgroup: rec.radio.cb
Date: 2000-11-09 00:00:00 UTC
From: Jeff Herrings <president@whitehouse.gov>
Message-ID: <h2yO5.120438$j6.12602726@news1.rdc1.va.home.com>
Source record: 58501

```
--------------------------------------------------------------------------
---------------------------
READ FIRST! I make no promises as to how well this will or will not
work. Any modifications done to a CB radio other than by a licensed
Radio Technician is strictly prohibited, hence, against the law. By reading
this message, the message below or any type of message from me, you
agree not to hold me responsible directly or indirectly of ANY wrong doing,
damage or illegal activites.
--------------------------------------------------------------------------
---------------------------

I thought I would help those new people to the CB out just a little
by posting a universal CB swing modification. This also helps those
who read the newsgroup (who are sick of some that do not wish to
do some research on the internet because they are too damn lazy)
by allowing them to read the newgroups without seeing every other
message be a question on how to perform a swing modification.

Without further delay.

First, this is what you'll need:

- Needle-nose pliers
- 15-30w soldering iron
- (2) Wires 12" in length (length DOES matter in this case)
- Rosin Core Solder NOT Silver Bearing Solder
- (2) 1 ohm resistors (Metal Oxide are recommended)
- Set of Meters (ie. Pyramid [not recommened], Black Cat, Dosy, Bird, etc.)

Now to the steps, pay attention CLOSELY else you MAY damage your
radio.

1. Disconnect all power cords and antenna wire (also known as coax)
2. Take off BOTH cover lids of the radio (if this is applicable)
3. Find your 12v Positive power source coming from power wires (but inside
the radio)
and solder one end of the first 1 ohm resistor to this.
4. Take your first wire and Solder it onto the other end of the first 1 ohm
resistor
5. Now solder the other end of the first wire to the leg of D2 (there will
be a stripe on one side of this
device, it will almost appear that it may be in the middle, but it is
indeed on just one side) which
has the stripe on it. (This is very important)
6. Now solder one side of the other 1 ohm resistor to the negative power
source (again inside the
```

radio where the power cords from outside would meet).
7. Solder one end of the other wire to the other end of the 1 ohm resistor you just soldered to
the negative power source.
8. Make three loops in the wire the size of a quarter (this also is VERY important, this will determine
if your radio screams on the air or not).
9. Use any type of non-metal tape (metal twist ties wont cut it, use nylon if anything) to hold those loops
in place.
10. Solder the other end of this other wire to D1 (the side with the strip on it, just as with D2)

Now...

Replace your covers, plug your radio in and watch it scream on the air.. why pay the guys who really
know what they are doing but charge you so much to do it?

Also, your radio may have been manufactured AFTER the standard D (for Diode) indication system
was made or it may not have been. If you do NOT have a D1 and D2, then look for either D101 or D102.
They are all the same.

READ FIRST! I make no promises as to how well this will or will not work. Any modifications done to a CB radio other than by a licensed Radio Technician is strictly prohibited, hence, against the law. By reading this message, the message below or any type of message from me, you agree not to hold me responsible directly or indirectly of ANY wrong doing, damage or illegal activites.

Take a very close look at this post. Starting with the first
disclaimer, how many incorrect statements did you find? If you
are silly enough to follow any of the instructions in this post,
don't be suprized at the smoke you see coming out of your radio.
'Doc

Message-ID: <21312-3A0AB019-10@storefull-123.iap.bryant.webtv.net>
Source record: 58505

I had a similar problem when I changed base antennas in 1990. Took me awhile to figure out what the hell was going on. I had 100 foot of coax between antenna and radio running the length of the mast. I had about 12 foot extra and just coiled it up on the roof. All was fine for about 2 years, then the swrs began changing rapidly at any and all times for no apparent reason. Sometimes the wind would blow and my swrs would skyrocket. Thought it might be antenna. Simple process of elimination, right? Ruled out the radio first, then connections, which left the antenna. Completely disassembled, cleaned and replaced hardware. Got it back in line, everything was fine....for a few days. High swrs again here and there. It was the coax. Whenever the coax was moved by anything, the swrs skyrocketed. Replaced the coax and haven't had a problem to this day. Even if t's new, coax can be bad. I bought 2 three foot jumpers on consecutive days from the 'shack and they were both bad. Might not be your problem, but it's worth checking out.

I recently saw a RC truck at the local mart. It had a sticker on it that said it operated on the freq of 27.145. I've seen on the RF man's site that there are "model control " channels around that part of the band. Does this mean that there is a chance of interference between me and a RC fan operating at the same time?

Man, this guy is SICK ! First of all, the WORST CB shops in the land put in these allaged "mod kits." Period. The BEST and good places REFUSE to do so, because WE KNOW that it is a scam (cuts down your power and makes you TOO LOUD) !!!!! This guy is SO BAD ---I love the last line---"If you do not have D1 or D2, use D101 or 102. They are all the same." The only thing that is the same IS BUTCHERED CB's done by idiots that will have to find their way to a good tech to fix what the butchers HACKED UP on them !!!!! IF you do this OR put any "mod kit" or "Swing Kit" in, you WILL be sorry! I take thm out ALL the time!!! And WHY do my customers want them out? Reduced range, that's why. But you loud butcher hackers wouldn't understand that. You ARE on loudness DRUGS !!!!!!!!!!
Dave!!!!!!!!!!!!!!!
!
Jeff Herrings wrote in message ...

READ FIRST! I make no promises as to how well this will or will not work. Any modifications done to a CB radio other than by a licensed Radio Technician is strictly prohibited, hence, against the law. By reading this message, the message below or any type of message from me, you agree not to hold me responsible directly or indirectly of ANY wrong doing, damage or illegal activites.

I thought I would help those new people to the CB out just a little by posting a universal CB swing modification. This also helps those who read the newsgroup (who are sick of some that do not wish to do some research on the internet because they are too damn lazy) by allowing them to read the newgroups without seeing every other message be a question on how to perform a swing modification.

Without further delay.

First, this is what you'll need:

- Needle-nose pliers
- 15-30w soldering iron
- (2) Wires 12" in length (length DOES matter in this case)
- Rosin Core Solder NOT Silver Bearing Solder
- (2) 1 ohm resistors (Metal Oxide are recommended)
- Set of Meters (ie. Pyramid [not recommened], Black Cat, Dosy, Bird, etc.)

Now to the steps, pay attention CLOSELY else you MAY damage your radio.

1. Disconnect all power cords and antenna wire (also known as coax)
2. Take off BOTH cover lids of the radio (if this is applicable)
3. Find your 12v Positive power source coming from power wires (but inside the radio)
and solder one end of the first 1 ohm resistor to this.
4. Take your first wire and Solder it onto the other end of the first 1 ohm resistor
5. Now solder the other end of the first wire to the leg of D2 (there will be a stripe on one side of this
device, it will almost appear that it may be in the middle, but it is indeed on just one side) which
has the stripe on it. (This is very important)
6. Now solder one side of the other 1 ohm resistor to the negative power source (again inside the
radio where the power cords from outside would meet).
7. Solder one end of the other wire to the other end of the 1 ohm resistor you just soldered to
the negative power source.
8. Make three loops in the wire the size of a quarter (this also is VERY important, this will determine
if your radio screams on the air or not).
9. Use any type of non-metal tape (metal twist ties wont cut it, use nylon if anything) to hold those loops
in place.
10. Solder the other end of this other wire to D1 (the side with the strip on it, just as with D2)

Now...

Replace your covers, plug your radio in and watch it scream on the air.. why pay the guys who really
know what they are doing but charge you so much to do it?

Also, your radio may have been manufactured AFTER the standard D (for Diode) indication system
was made or it may not have been. If you do NOT have a D1 and D2, then look for either D101 or D102.
They are all the same.

READ FIRST! I make no promises as to how well this will or will not work. Not only should they not go under CB, you should never put in the fact that they have 11 meters or extended coverage. if someone needs to know they can email you, but nearly all radios with the words "2510, Ranger, export, galaxy, etc. " are apparently hot buttoned to the staff at eBay, who will bounce the auction. They also seem to get some help at times from do-gooders pointing out modified radios via "Safe Harbor".

Source record: 58514

Hey, Mr. Ice Cold Apple Man, did yo vote for CommyBagger Hillary? I hear that ONLY NYC Bimbos voted for her. Since you are there in da middle of it, what do you see there? Can you send me a map on New York state showing which counties voted for her? Was it just NYC & that's all? From all my talk to New Yorkers, NONE of them voted for her. But I guess that those non-CB Bimbos are too numerous there, so she got in. Prepare to move or accept MORE COMMUNISM from Murderers Bill & Hillary!!!!!!!! What do you think, Mr. ICE ?
Dave

http://cnnfn.cnn.com/2000/11/01/technology/fcc_dsl/index.htm

NEW YORK (CNNfn) - The Federal Communications Commission issued a report Wednesday saying that high-speed lines connecting homes and small businesses to the Internet increased by 57 percent during the first half of 2000.

High-speed access rose to 4.3 million lines, or wireless channels, in service as of June 30, from 2.8 million at the end of 1999. The report shows that America's Web surfers have a "need for speed," and are willing to pay

That's exactly what I meant by my question: 27.555, for example is USGOV in the lists. And 28.060 amateur radio. NOT European OR U.S. cb radio operators. We gotta have some coordination and rules on how to operate a radio: rf has no respect for national boundaries. Thanks for the nice answer (BTW: a ham can tell another ham from his calsign, not from e-mail addresses or such- I chose my e-mail address to be my callsign - it could well have been any combination of letters). Keep studying, maybe some day you could pass the nov exam. Gary

Greetings!

It's a long story, but in short, can you possibly replace the antenna? - it's the better of the options you have now.

If you need some clarity, try this URL:
http://www.iserv.net/~codyspc/coax.htm

It may help decipher what I'm going to say...

It is possible, by what I read in your post, that the coiling of the coax means something is reactive here, either via poor grounding or the antenna is a mag-mount and needs a specific length of coax to work with the antenna.

It can also indicate that the ground for the antenna at that location is poor, or that the counterpoise the antenna expects, is different and makes the antenna offer a different impedance. It's either due to either lack of RF ground/counterpoise, or the type of counterpoise the antenna can't work well with - either/or you have a reactive antenna system and you should check all connections - including the patch cords.

Either way, you've relocated the antenna onto a different vehicle, so now you have some bigger problems with keeping the SWR down.

What is the set-up - sure you have a CM-10, but what kind of antenna?

Mag mount?
Wilson 1000?
Piece of damp string?

Knowing the *type* or brand of antenna, we'd have better luck than shooting in the dark.

At least the radio is working.

Options...

Relocate the antenna - something where it's at, makes it very reactive and your SWR problem.

Replace antenna, or whip - if possible so you can re-tune.

Try to ground the radio using it's bracket, to a good metal to metal contact with the body of the truck. This is the easiest option and usually takes care of RF grounding problems associated with mag-mount antennas that have no ground at the location on the vehicle. [THIS DOES NOT FIX A POOR ANTENNA OR BAD LOCATION - YOU MAY NEED A SPECIFIC

LENGTH OF COAX TO LOWER SWR TO OPERATE THE RADIO - it also affest
performance too so you're stuck if you won't or can't do anything.]

If you can't do the above, then you may be stuck with the coax
offering a method of it's reactive characteristic to offset the
reactive part of the antenna and gives you the low SWR.

This is called conjugate matching. If you can't change any of the
parts above, then you're stuck with this problem until you act on one,
some, or all of the above to correct the problem.

Greetings!

[SIC=on.]
[Humor=Enabled.]

For Educational purposes only, check local laws before proceeding...

It is also a good idea to check the radios warranty, the following proceedures have been known to violate the warranty.

Acquire a 50 foot cable, cable gimbals and cable fasteners - and a .357 gun with proper ammuntion shells...

Proceed as follows...

Mount radio on a tree trunk or simply lay it on the ground. This should be done in an open area, free of bystanders or gawkers.

Remove the firearms saftey...

Aim gun and fire single round into the case.

At this point, you should re-arm the saftey and verify that you've struck the radio...

...if not release saftey and try again, only aim at the radio - and only the radio...

You can now insert cable into one hole and exit out the other

[if you find the hole is not big enough to insert the cable - simply follow the firing step above - repeatedly, until the holes are large enough to handle the cable...]

Form a loop using the cable.

Apply appropriate gimbals and cable fasteners to the loop - tighten securely.

Hand free end of cable at any outcropping of your choice.

You may now swing the radio at your leisure...

Please see "READ FIRST!" DISCLAIMER below for further details...

:+>
:+> I thought I would help those new people to the CB out just a little
:+> by posting a universal CB swing modification. This also helps those
:+> who read the newsgroup (who are sick of some that do not wish to
:+> do some research on the internet because they are too damn lazy)
:+> by allowing them to read the newgroups without seeing every other
:+> message be a question on how to perform a swing modification.
:+>
:+>
:+> Without further delay.
:+>
:+> First, this is what you'll need:
:+>
:+> - Needle-nose pliers
:+> - 15-30w soldering iron
:+> - (2) Wires 12" in length (length DOES matter in this case)
:+> - Rosin Core Solder NOT Silver Bearing Solder
:+> - (2) 1 ohm resistors (Metal Oxide are recommended)
:+> - Set of Meters (ie. Pyramid [not recommened], Black Cat, Dosy, Bird, etc.)
:+>
:+>
:+> Now to the steps, pay attention CLOSELY else you MAY damage your
:+> radio.
:+>
:+> 1. Disconnect all power cords and antenna wire (also known as coax)
:+> 2. Take off BOTH cover lids of the radio (if this is applicable)
:+> 3. Find your 12v Positive power source coming from power wires (but inside
:+> the radio)
:+> and solder one end of the first 1 ohm resistor to this.
:+> 4. Take your first wire and Solder it onto the other end of the first 1 ohm
:+> resistor
:+> 5. Now solder the other end of the first wire to the leg of D2 (there will
:+> be a stripe on one side of this
:+> device, it will almost appear that it may be in the middle, but it is
:+> indeed on just one side) which
:+> has the stripe on it. (This is very important)
:+> 6. Now solder one side of the other 1 ohm resistor to the negative power
:+> source (again inside the
:+> radio where the power cords from outside would meet).
:+> 7. Solder one end of the other wire to the other end of the 1 ohm resistor

:+> you just soldered to
:+> the negative power source.
:+> 8. Make three loops in the wire the size of a quarter (this also is VERY
:+> important, this will determine
:+> if your radio screams on the air or not).
:+> 9. Use any type of non-metal tape (metal twist ties wont cut it, use nylon
:+> if anything) to hold those loops
:+> in place.
:+> 10. Solder the other end of this other wire to D1 (the side with the strip
:+> on it, just as with D2)
:+>
:+> Now...
:+>
:+> Replace your covers, plug your radio in and watch it scream on the air.. why
:+> pay the guys who really
:+> know what they are doing but charge you so much to do it?
:+>
:+> Also, your radio may have been manufactured AFTER the standard D (for Diode)
:+> indication system
:+> was made or it may not have been. If you do NOT have a D1 and D2, then look
:+> for either D101 or D102.
:+> They are all the same.

4680. Re: mode control freq's in CB range

Newsgroup: rec.radio.cb
Date: 2000-11-09 00:00:00 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <uill0to1r9msejroq3rpe5fkgpvpoc790k@4ax.com>
Source record: 58537

Greetings!

You're mean!

[LOL! I used to do that too!]

On Thu, 09 Nov 2000 15:59:41 GMT, while the modem was pondering it's
navel, twï¿½ <twï¿½@coldmailï¿½ï¿½.com> dissertated the following:

:+> x-no-archive: yes
:+>
:+>
:+> Hehehehehe, this reminds me of a little trick I used to do to my neighbors kid. He had gotten a rc monster truck for Christmas and went outside and started playing with it. Well, I noticed this and went out side to my truck. I figured that his rc truck operated either at 27MHz or 49MHz. So I turned on my cb and cranked up my box and keyed up with about 250w. The truck stopped dead in its tracks. The kid went over to pick it up. He picked it up and tried to get the wheels to turn. He then put it back on the ground and continued to get it working. He was working that remote like you wouldn't believe. I finally let go of the key and the truck went on its way. He then set up a ramp to jump it on and was halfway up the ramp and I keyed up again. The truck slowly rolled off the ramp and fell on it's side. Well, I think they took it back to the store to get a new one. LOL
:+>
:+>
:+>
:+> ---
:+> dan <shumd93c@onyx.pvcc.cc.va.us> wrote in message news:3A0A3983.E5732074@yahoo.com...
:+> I recently saw a RC truck at the local mart. It had a sticker on it that said it operated on the freq of 27.145. I've seen on the RF man's site that there are "model control " channels around that part of the band. Does this mean that there is a chance of interference between me and a RC fan operating at the same time?

Regards!

Wireless Mgtg is the USA corporate name for the "cherokee" company. WM is not in any joint venture in regard to the Superstar base radio, it just happens to be made by Maycom, the same company in the Orient that built some items for WM.

Just 'cause it says they use triple 5 doesn't mean it's still practiced. How old is that chart? I think you know. The modes and laws are outdated, not cbers fault. There are more advanced communications now among Govt. agencies than to use analog AM at 555.
Old stupid laws that don't apply are still on the book everywhere if you look hard enough. Example: You cannot beat your wife in Ohio with a stick thicker than your thumb!

From: Scott <yetbbwa@grove.iup.edu>
Message-ID: <3A0AF8EA.6ACED1E4@grove.iup.edu>
Source record: 58604

I am planning the wiring of my XL450 now. I was going to stop in the local car stereo places and see what kind of wiring they have available. Do you think it would be better to run 2 #8 wires for each lead (+/-) or would it be okay to use a single #6 if the run is about 8 - 10 feet? Also, what size fuses do I need? I am guessing I need about a 70 ampere fuse - is this enough? I also got to take a look at the fuses available in the size, I take it there not the standard automotive glass/spring loaded type. Should I look for a certain kind? Should the ground(s) run to out the firewall and ground to the engine block, or should I ground to the frame straight out the bottom of the cab? I have lots of wiring concerns, I never wired up anything I couldn't hook straight to the fuse box. Should I fuse the ground lines too? All my ham gear has fuses on all the power leads.

Thanks.

As time goes by, Jerry, as much as I disliked you in the past, I'm beginning to like you by the second. You're absolutey right about HAMs coming here to flame every post a CBer writes. At first when I came to the group two and half years ago during the time of #12 (again welcome back), Sean, PAINKILLER, ICE and the rest of the oldies, I wanted to broaden my knowledge of radio and its theories (everyone has to start somewhere). As Dennis, Sean and a few others helped me understand radio a little better, I said "what the hey... why not get my no-code and work from there?"... in which I started but soon after I lost interest. Why? Because of the attitude of the HAM both here and on the spectrum. It wasn't any different than on the CB. Now I'm not saying all HAMs but a few that I heard on my receiver. Then the whole RF police thing kind of turned me off. If it happens on the NG, on 40, 60 or 75meter, on CB frequencies, why the hell am I studying the "Look who's talking now" book and what not? Hell, I'll just run on up to 38LSB and DX from there without busting my ass for a ticket.

Did I just get longwinded? Oops...

454 big block
3/4 Ton
tan color, good paint
all new black and gray interior with
new molded carpet kit
tinted windows
rebuilt motor 75,000 miles.
Has new AC parts but have been taken out to make room for alternators.
Custom CNC machined antenna mount (I have been told its the best mount ever seen).
Ford 200 amp alternator, new.
300 amp external rectifier, new.
external transpo voltage regulator,new.
20' of 3 O.D. welding cable already run through fire wall to rear of vehicle
9 X 6V golf batteries, 7 of which are brand new.
RG-213 coax

$4000, available in Southern California

> about 8 - 10 feet?

Heavier and shorter are the rules for best performance from the
amp. In your application, either one is a good choice.

> Also, what size fuses do I need? I am guessing I need about a 70 ampere
> fuse - is this enough?

It'll work, but the idea is to minimize resistance along the
DC lines. Since the fuse is only there to protect against a
fire in the event of a major short, it can be very heavy. You
may want to use two if they are AGU type (the large glass ones).
A major short in the size of wire you're using will blow a pair
of 60s easily. In other words, a single 100 amp fuse is the
minimum I would use in order to strike a reasonable compromise
between protection and added resistance.

> I also got to take a look at the fuses available in the size, I
> take it there not the standard automotive glass/spring loaded type. Should I look for a
> certain kind?

Adequate protection with minimal resistance is the goal.
My favorite DC setup is a heavy relay that turns on and
off with the ignition switch. That setup has the least
resistance, and it also unloads the power transistor
collectors when you're away from the vehicle. RV and
trailer supply places have large relays with mounting
tabs for a resonable price. For instance, near me is
an RV place that sells 80 amp constant duty relays for
$16. The heavy fuses and holders cost more than that.

> Should the ground(s) run to out the firewall and ground to the engine block,
> or should I ground to the frame straight out the bottom of the cab?

Connect it to the end of the negative battery cable
opposite the battery (engine block). The positve
should start at the starter solenoid end of the
positive battery cable too. Mount your relay or
fuses as close to the starter solenoid as possible.
The wire between the starter solenoid and the relay

or fuses is unprotected, so you want it as short as
possible. Then, run from the protected side of the
relay or fuses to the amp.

> I have lots of wiring
> concerns, I never wired up anything I couldn't hook straight to the fuse box.

No. In fact, to avoid ground loops, you should run
the radio's DC lines to the same place as the ran the
amp's DC lines.

> Should I
> fuse the ground lines too?

No.

> All my ham gear has fuses on all the power leads.

They do that so there will be a fuse on the hot side
even in a positive ground installation.

> Thanks.

You're welcome.

Unless you have some sort of decoupling mechanism so that people in Pennsyltucky don't have to sweat how Chicago cemeteries voted and how often, you are stuck with Federal supervision and the classic problem: who watches the watchers. The Electoral College does weight small states a bit high (less relevant in AD 2000 than 1788) but its primary purpose is to guarantee that states can run honest elections without getting the green weenie and adopt an approach that serves their purposes; in some states Motor Voter did not apply because the state was already easier.

Does it make sense? If voting standards and procedures were uniform and uniformly honest or dishonest, the answer is of course no. Given that making them uniform probably is worse than the problem it cures, then the answer is a reluctant yes.

Source record: 58624

Depends on what you are going to use it for of course. Here are some of my thoughts though. For the higher end export radios with extra channles and higher power I like the RCI 2950DX or RCI 6900 HP. Galaxy also builds good radios, particularly the DX99V. All the above are in the $300 - $350 range. For a "standard" CB the Uniden Grant is well thought of as are the Texas Ranger 900 series and also the Galaxy DX-949. They are in the $150 range. From what I hear, you are probably better off with one of them than a Cobra.

The antenna is the most importent part of you setup. If you have a good radio and and poor antenna you will have a poor setup. If you have a poor radio and a good antenna you will have a decent setup. Dont cheap out on the antenna! The Wilson 5000 and 1000 are good antennas.

I use a stock mike and it works fine for me.

My setup is a RCI 6900 HP, Wilson 5000 antenna, stock mike and I am quite happy with it.

My opinion, YMMV.

4718. With Al, The lies just keep on coming....

Newsgroup: rec.radio.cb
Date: 2000-11-09 00:00:00 UTC
From: fire228@my-deja.com
Message-ID: <8ufcg9nqi1@nnrp1.deja.com>
Source record: 58625

Als at it again.....

Ever since this Florida thing, Als been lying
through his teeth. His "talk" now is that he
has won the popular vote. Normally Al might
be able to say this, except for the fact that
there are still well over 2,000,000 "popular"
votes unaccounted for from the states of california,
colorado and oregon, not to mention the absentee
ballotts from our service people overseas. In 1996
they numbered approximately 2,600, voting 9 - 1 in
favor of the republicans. If you're a member of
the military, you already know why.

And will somebody please contact CNN and tell
them that we would like to see the certified
recount of the votes, not APIs "predictions".

THIS IS NOT REAL.....

362 votes with 64 of 67 counties reporting
(prediction or just their "wish list"!)

THIS IS REAL.....

1784 votes certified in favor of george bush
with 53 counties reporting (direct certified recount results)

Gore followers are so easily "whipped up", emotionally
that is. Gore likes to take advantage of things like
that. Als not as good at it as Bill is.

A Revote is NOT an option.

Officially, at 4:30 PM Arizona time, its:

53 out of 67 counties reporting 1,784 votes in favor
of George W. Bush. Gee, that's the number we had when
all of this horseshit started.

Heads Up Everyone,
NAO911/Jack

> something .

Hot and a backdoor was what most of them ran and believe me its true. I know Dave makes a good amp and I am not claiming more watts than his but I do not lie. I ran Daves amps for years and was on a speaking relationship with him. I have keyed with a lot of them and have lost against very few. Daves amps produce watts but his are not the only ones that do. What it comes down to is antennas and I really like the way mine work.

Hey Bill (or Joe) I have a wall full of trophies from various breaks I just have never came up your way, Maybe the guys I keyed with running Dave's stuff were nobodies, maybe they were not the DaveMade heavy hitters, all I know is I have one most of the time when I came up against a DaveMade amp. I am not trying to be cocky by any means I am just telling the truth. I dig all the guys who keydown, it keeps the hobby alive. I am polite an respectful at the breaks but you can't blame me for standing up for our cause, which in this case is not Davemade.

4724. swr meter or antenna tuner?

Newsgroup: rec.radio.cb
Date: 2000-11-09 00:00:00 UTC
From: christopher <chrism@centurytel.net>
Message-ID: <1pHO5.5146$T6.1273217@feed.centurytel.net>
Source record: 58631

i am simply wanting to checking the standing wave pattern on my antenna, i am not wanting to use a seperate unit to adjust it...i want to adjust it by adjust the antenna or coax cable. which do i want? what recomendations do you have for what type of meter/tuner i should get?

also...i have a CB antenna that may have bad coax cable, can i splice in new cable some how, if so, what do i need, or do i have to buy a new antenna?

Christopher,
If you want to tune your antenna, then tune the antenna.
Fiddling with coax doesn't 'tune' anything, it only 'fools'
your SWR meter, it doesn't change any mismatch at the antenna.
'Doc

> between protection and added resistance.
>

I went to a car stereo place that has 200amp fuses for 15$. The holder
for the fuse
is the expensive part ($40 - waterproof, etc., made for the engine bay).
So this would be better, because it would have less resistance but still
blow in the case of a short I assume.
I am going to use #4 wire.

As for the relay idea, that would only provide protection when the key
was off, right? If the relay was on, and something shorted out when you
were running down the road, there isn't going to be a fuse to blow?

> Connect it to the end of the negative battery cable
> opposite the battery (engine block).

Is it better to run the ground all the way back out through the firewall
to the engine bay? I am mounting the amp under the seat, whats wrong
with using #4 to where the seat bolts to the bottom of the cab? If I
scrape off paint and make a nice solid connection here, is this ok? I
can tell you the cab is connected to the frame with quite a few heavy

copper wires from the factory. I suppose this not be a good idea, but all the car stereo amp places say to make the ground short. It would be a long run out to the engine.

Also, how should I connect the wires coming out the Amp to the #4 wire? The wire out the amp is #10. I suppose soldering would be best, but would make it a pain to remove if I needed to. Is there a low resistance connectors that I could use here?

Thanks.

Scott.

Good advice can be found here:

http://www.ameritron.com/ameritron/manuals/html/als500m.html

Its the owners manual for a Mobile HF HAM amp that does about 500 watts out as well. Bill, if you are reading this, I see that I can probably hook the ground under the seat. I just have to make sure there is a really good connection between the engine block and the chassis, because more than likely the battery's Neg lead is hooked to the engine (reasons mentioned in about manual).

Scott.

Howdy,

Hey, I'm still learning things on this group! I try to stay out of the "flamefests" and just answer general tech questions if I can. Sure, I enjoy ham radio very much, but to each his own. If somebody's gonna get busted, then it's not my business to be running on about it. I DO think that you should give ham radio more of a chance. I have found buttholes on Ham radio that I certainly won't talk to, and plenty of infantile behavior. But, the beauty is that I can move onto so many different freqs, so many different bands that I can avoid them. I don't let a few miscreants keep me from enjoying radio!

BTW, I got a card in the mail from an SWLer today who heard me in New Mexico on 12 meters from South Carolina while I was mobile. He was very nice asking me to confirm his "SWL contact" from SC which I was happy to do. Just goes to show ya--ya never know who's listening and I really can't understand those neaderthal hams whose only activity on the air is flaming, arguing, and cussing. They <<should>> be acting as ambassadors for the USA and ham radio, as well.

OH! I almost forgot. I worked a maritime mobile just a litle while ago from NC (home QTH) 700 miles west of Los Angeles outbound for Honolulu. The operator lives just 10 miles from here, but her (that's right, her) job is as a radio officer on cargo ships. I thought that was neat. Those are the things that attract me to ham radio.

Best 73

If it wasn't for the electoral college, all the candidates would be going to California and New York to campaign. They wouldn't listen to anyone's concern in Kansas, Montana, or anywhere else.

The framers of the Constitution knew what they were doing. It is a real shame that people are trying to second guess their wisdom...

neighbors kid. He had gotten a rc monster truck for Christmas and went
outside and started playing with it. Well, I noticed this and went out side
to my truck. I figured that his rc truck operated either at 27MHz or 49MHz.
So I turned on my cb and cranked up my box and keyed up with about 250w. The
truck stopped dead in its tracks. The kid went over to pick it up. He picked
it up and tried to get the wheels to turn. He then put it back on the ground
and continued to get it working. He was working that remote like you
wouldn't believe. I finally let go of the key and the truck went on its way.
He then set up a ramp to jump it on and was halfway up the ramp and I keyed
up again. The truck slowly rolled off the ramp and fell on it's side. Well,
I think they took it back to the store to get a new one. LOL

I have to agree with everything here, except the point about Galaxy's radios... If you're going for sideband, stick with RCI and Uniden. The Galaxy's tend to drift too much to be useful on sideband, and I've heard too many people out there on 27.385 bragging about their kewl galaxy while their audio warbles all over the place, making it difficult to understand them.

Just my two cents. Your mileage may vary.

-SSB

On or about 09 Nov 2000 23:11:33 GMT, nick250@aol.com (Nick250), using the forum rec.radio.cb did say:

:Depends on what you are going to use it for of course. Here are some of my
:thoughts though. For the higher end export radios with extra channles and
:higher power I like the RCI 2950DX or RCI 6900 HP. Galaxy also builds good
:radios, particularly the DX99V. All the above are in the $300 - $350 range.
:For a "standard" CB the Uniden Grant is well thought of as are the Texas Ranger
:900 series and also the Galaxy DX-949. They are in the $150 range. From what
:I hear, you are probably better off with one of them than a Cobra.
:
:The antenna is the most importent part of you setup. If you have a good radio
:and and poor antenna you will have a poor setup. If you have a poor radio and
:a good antenna you will have a decent setup. Dont cheap out on the antenna!
:The Wilson 5000 and 1000 are good antennas.
:
:I use a stock mike and it works fine for me.
:
:My setup is a RCI 6900 HP, Wilson 5000 antenna, stock mike and I am quite happy
:with it.
:
:My opinion, YMMV.
:
:Nick

If playing with the cable effects the SWR reading, chances are you
have a poor RF ground. In other words, instead of the vehicle body
providing the RF ground (aka ground plane), all you've got for an
RF ground is the outside of the coax shield and the cabinets of
your equipment. If that's the case, and you were running power,
you'd also have an RF feedback squeal.

You say that you cant understand what people on the Super Bowl are saying. that is because it takes a special talent of wanting to concentrate on hearing thru all of the competition. You seem to act like you know a little bit about radio, So you should know and respect what the Super Bowl is about.

Super Bowl 6 is the channel where all of the big boys of CB radio, Black and White gather to test out their radio stations. Yes it is all about power and modulation.....Its good clean competition, and everyone respects each other. If you are lucky and powerful enough to get your name called on the Bowl, that is an acomplishment. Because at any given time when Dx is rolling, there can be 10,000 people trying to get their name called.....Only a certain few can accomplish this.

So instead of trying to put someones accomplishments down.....Try to learn to understand what goes on behind the scenes. Some of us spend money to make our radios talk, and there are some like yourself that would rather avoid the competition.

Be a man.....Spend some money, and then try to come up on the bowl and talk.....Maybe then you will be able to appreciate how hard it is to get your name called.

Mr Big

4745. Re: Been out of cbs for some time..Is cobra still a good brand to buy??

Newsgroup: rec.radio.cb

Uniden used to make the boards for Dynascan (Cobra) but that stopped years ago when Dynascan decided it was better to go with the lowest bidder.

Cobra radios SUCK! If you want the BEST CB made, get a Uniden! I have always hated the Galaxy line but my tech in Sounthern California says he can get SOME of them louder than even the old Cobra 29!

But a Galaxy is not a real CB (MHO). Go Uniden!

Dino

>Grants are NOW the same as the old 148's. Cobra is NOT a good brand to
>buy--the Unidens are the same as old cobras, still made in da Phillipines
>like the old ones of 90-93. After 93 all now are made in RED COMMY China,

Not only should they not go under CB, you should never put in the fact that they have 11 meters or extended coverage. if someone needs to know they can email you, but nearly all radios with the words "2510, Ranger, export, galaxy, etc. " are apparently hot buttoned to the staff at eBay, who will bounce the auction. They also seem to get some help at times from do-gooders pointing out modified radios via "Safe Harbor".

Hello Tim: Great Looking antenna, goofy looking guy. (humor)

If you look at the construction, it has the elements elevated above the boom by a inch or two, good deal. Probably using a aluminum plate that is U-bolted to the boom, that also is U-bolted to the elements. This is great construction practice. Its strong, and you don't need any thing specially made up in a machine shop.

The Gamma match sticks out like a big sore thumb. I prefer the Beta Match impedance matching device.

Jay in the Great Mojave Desert, ... just down the road ah ways form the fillin station. Miss Dinah says: "You bastards whip your feet before comin in here ta my fillin station, ain't you got no couth?"

4773. question about an oldy but goody

Newsgroup: rec.radio.cb
Date: 2000-11-10 00:00:00 UTC
From: John <n1umjjohn@netzero.net>
Message-ID: <c%SO5.2628$751.21077@typhoon.ne.mediaone.net>
Source record: 58688

Hi their all, I have a question about an oldy radio but goody. It is a johnson messenger 250 50th anaversery radio. I just got it, looks like it has been in an attick for a few years, 20 or so, looks good now that I cleaned it up but has low transmit and recieve. Before I go swapping parts out that aren't rong, does anyone know common problems with these great radios? Also does anyone know where I can get parts, or a very cheap parts radio. Any info on the radio would be greatly apreciated. Seems to work alright besides everything is low, might just be power supply transformer but that is an expensive part from past history with another radio with the same transformer so I want to make sure. thanks, any help would be apreciated more then you know.

-- email, n1umjjohn@netzeor.net if you can help, don't reply to the group because I can't check this group from most places.

> better!!!!!
> Atoka

I have a base station and when I made out my equiptment list, I included an amp.

First I bought the antenna, (I-MAX2000) and then the radio (Galaxy),
mic(D104) and a high quality low pass filter. I worked on the radio and was
able to achieve decent output (around 40w on SSB). I started working the
skip and was amazed that I was DXing to Sydney, London, AZ, CA, NY, etc.
every late afternoon. I have decided to hold off on getting the amp because
for SSB I simply dont see any need for it. Matter of fact its almost more
exciting because I DONT run the amp. Even on AM I get good signal reports
in my local area at nite. I think alot of credit goes to the I-MAX
antenna.

I also DO have an 200w amp and radio in a vehicle. And when in
motion(which is most of the time) I get about 15-18 miles max. of
dependable contact on SSB with the amp.

What am trying to say?
1) You're expectation of the amp may not be met. Maybe you need more than 250w.
2)If you pay attention to the correct set up and buy decent components for
your station, you may not need an amp.
3)SSB RULES!

Just my 2cents!!

Greetings!

Gutter mounts are not worth the hassle - can bend the gutter and ruin
the paint job. Plus you get directional results and these antennas are
small - too small to do a good job.

On Thu, 9 Nov 2000 21:46:20 -0800, while the modem was pondering it's
navel, "christopher" <chrism@centurytel.net> dissertated the
following:

I would have to say if you just wanted to get going that a Uniden Grant XL or LT would be best. They have excellent receive and transmit very well also. Wilson 1000 or 5000 would also be the way to go. However, i would not personally stick with the stock mic. Get yourself an astatic D104 m6b. You will get a lot of good compliments on that particular system. As always...just an opinion

Greetings!

That depends on cost...

If the skys the limit, then the only limitation is the "CB" part...

The best set-ups are simple ones - the 3 main parts,

Radio -

For a base, try a Uniden Washington, or perhaps a Cobra 142 GTL [no longer made but are still around]

Mobile? Grant LT or Grant XL

Antenna?

Wilsons are pretty good, but length of antenna is important. The longer the better, a 102" whip, Shock Spring, and ball mount are the best for the long run in durability and signal reports.

Wilson is ok, but geared for those that don't want a 102" monster making their car look like it's remote controlled.

Firestik and Francis are good contenders for Mobile use.

Base antenna? Gawd - this can cause flames to erupt but A-99's are still popular as well as many others. You'll need good mast pipe and tripod, or tower sections to lift that baby into the air.

Connect up this "Hi-Po" miracle of antenna with good quality coax with pre-molded and sealed ends to keep out corrosion. RG-8 or RG-213 is good "general purpose" coax that will last a long time. Just don't splice in patch cords otherwise you may lose signal quality in both reception and transmission.
Coax

On 09 Nov 2000 18:45:55 GMT, while the modem was pondering it's navel, kel620@aol.com (Kel620) dissertated the following:

Hell no I wouldn't mind Gary! C'mon down to 555 with your "hammie" station. Better yet, since you brought up coming to those freqs with your hammie station, c'mon down to the bowl....IF you can be heard. The Govt. is well aware of 555 and it isn't used anymore. You being a hammie and all I thought you may be better aware than your "average" cber about frequency allocations and USE, but I see you're not. I could care less what takes place on 14.010. Is it abandoned also? Let me know, I need a new freq for my pirate station mobile. Nothing like going out in the boat and pirate-radioing on FM utilizing mother nature's gift of sodium H2O. 14.010 you say?

poisonivy,

You are obviously among the deceived who wrongly
believed Al Gore when he claimed to have won the
"popular vote". With between 1,500,000 to 2,000,000
popular votes still uncounted, Als doing what he
does best, lying thru his teeth, emotionally
"whipping" up his supporters by distorting the facts.

With upwards of 2 million votes still uncounted in
california, colorado and oregon, which by the way are
in portions of these states that favor republicans,
let's not forget some 2600 military absentee ballots,
with the military typically voting 9 - 1 in favor of
the republican party as well.

Neither of the two candidates have won the popular vote.

Bush has won the electoral vote.

Let the process play itself out and learn to discern
the difference between the truth and a lie.(Gore)

And leave the constitution the hell alone.

The only thing the democrats are worried about is that
they won't be able to pardon all of their criminal
friends unless Gore takes office. Poor Bill.

Jack

FOR SALE: a GOOD set of these 2 items for TUNING UP the receive section of CB's. I got them from a place that was in biz. 50 years that did everything from speedometers to car alarms, so CB was one item that they did. The alarm & car stereo biz went to the greedy car dealers, the tech got old & retired, and that was it! So the first $400 & ship takes both pieces, so you will be able to expand your CB business to tune up receives to make them more sensitive to hear further. E mail me ONLY @ truth@planetc.com for details. Dave

House resolution 2346 has passed and is in the senate as S.2767. What does this mean to YOU! This authorizes State and Local officials to enforce FCC regulations regarding the use of CB equipment.

I personally abhor the use of illegal CB equipment, that being said, I am more concerned that the local authorities now will be able to act under the color of law as surrogates for the FCC. That is to say Barney Fife can now come in and determine you are in violation of the Federal Law and take the same action as the FCC would in the same circumstances. I am in total agreement with the intent of the law, however find the implementation somewhat Gestapo like.

On or about 10 Nov 2000 16:10:20 GMT, riradiobuff@aol.comspamsux (Andy in RI), using the forum rec.radio.cb did say:
:Now why are you going and giving false info? The frequency is the same
:regardless of mode...

Wow... You just showed your ignorance....

AM and FM have their carrier (or center frequency) on channel 40 on 27.405 Mhz.

AM has 3 components. the carrier, on the "center slot" frequency, Upper Side Band, and Lower Side Band. The USB and LSB are where the audio is, and the carrier is used by the receiving radio as a reference point.

The USB is 1.5Khz above the carrier, and the LSB is 1.5Khz below the carrier.

So when you're transmitting AM, you're actually transmitting on three separate frequencies, very close together, simultaneously. And you wonder why a rig doesn't swing as much on AM as it does on SSB?

AM takes the modulation and varies the output power on the sidebands, varying the amplitude of the transmitted signal. That's why it's called Amplitude Modulation.

FM takes the modulation and varies the transmit frequency of the transmitted signal. That's why it's called Frequency Modulation.

So the prior post was only slightly incorrect....

27.4065 USB
27.4050 AM & FM center
27.4035 LSB

Hope this fills in the holes.

I would suggest you look at the map in USA today. As an example Mr. Bush led the popular vote all evening long until California. At that point the huge democratic population made Mr. Gore the more "Popular" candidate.

Without the electoral college, New York, Pennsylvania, Florida, Illinois and California would control every election making your vote worthless unless you lived in one of the above named states.

What is even more "ironic" is the pepole who freely advocate amplifier
usage, freebanding, and shooting skip, on 11m are afraid of admitting they
do a little SSTV in a public forum.

Gee! I remember a thread here last year sometime discussing this matter. Do you actually think that the local Sheriffs or Police Departments are gonna go around doing RF Policing? Especially when you're from an area of highly intensive crime, do you actually think they have the time to Police your illegal equipment? PLLLLLLLLLEASE!!! Citizens on Patrol have bigger fish to catch and fry.

The local Police Department stopped by my place asking me to stop transmitting because its causing interference with my neighbors. Well at the time of the so call transmissions, I was in class at the local community college. "Huh?" Reason is its because my neighbor can't stand the site of a 40 foot tower and an antenna in my yard and complained because and I quote "my dad was a HAM and he bled everything in the house. You must be a HAM and I know you'll bleed on my house, you f#@king basement dweller!" I told him where and what he could do with himself.

I don't have any of the toys I use to have before. Got rid of them all to setup the mobile. Besides, I did a thorough check of all my immediate neighbors electronic devices 5 houses up and 5 houses down

the street. I live across an empty lot just North of me and a Party House to the East seperated by a huge parking lot. I have never got a complaint from my next door neighbors and will never because of the simple fact that pissing off the neighbors could be very detrimental to my hobbie.

A Cobra 2000GTL (with minor audio and channel mods) into a homemade 5/8wave ground-plane (no matter how you look at it) never ever bled. And never will. And if the Police stop by, they better have a damned good reason why.

Just imagine if the situation was reversed;
George Bush having MORE electoral votes & seems to have WON the popular vote, except in the one state run by Al Gore's Brother. A mandatory recount seems to at least unofficially narrowed Gore's lead to only 326 votes, with many absentee still to be counted. On top of that, in the most Republican county of Gore's brother's state, almost 20,000 ballots were thrown out. Also, the ballot in that county seems to violate state law, which clearly states that Bush was to be second on the ballot, yet a voter had to punch the THIRD hole on the ballot to vote for the 2nd candidate! ....Enter Ralph Nader, the 3rd guy, who admits on National television that most of his 3400 votes in that county should most likley be Bushes.
TELL ME, would George W do anything different than what Gore is asking for at this point.....Of Course not!!!

You people bust all the other rules for operations on 11m, including Tim, so why is he so afraid about publicly talking about doing 11m SSTV? Tim's even got a web page where he discribes his illegal actions for all to read. Now he wants to keep secret his SSTV operations! What is he trying to hide? He thumbs his nose at the FCC with everything else he does, so what's a little SSTV thrown on top of the pile of other illegal things he does?

What you say would be true, only if the carrier were being modulated by a 1500Hz signal. In reality when and audio signal is mixed with an RF signal the result is the Sum, the Difference, and the two original frequencies. if the modulator were capable of passing a 1 Hz audio signal, the two sidebands would appear 1 Hz above and 1 Hz below the carrier. When a signal is overmodulated the carrier is cut off and generates in addition to the normal audio sidebands, spurious signals that appear many Khz either side of the carrier. You have probably observed this as splatter or "Washing".

I posted this about 2 years ago to help explain the concept of the Superbowl.
My good friend Shadow on www.bigradios.com put it on her website!!!!
Here it foes again for any of the newbies that still dont get it!!!!!

If there are 10,000 CB'er's on the SuperBowl...
then out of 10,000 only 1,000 can be heard some of the times...
and out of 10,000 only 100 can be heard most of the times....
and out of that 10,000 there are probably only 10 of the most well known
guys that talk on the SuperBowl and can almost talk skip when they want.....
This is a great example why the bowl is not for the weak!

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't
mean a THING if you ain't got that SWING!!!!!!!

Also, when there are voting problems, the electoral college can compartmentalize voting problems (fraud). For example, it would be much easier to rig an election by popular vote if those that wanted to do it only had to go to one place to manufacture those votes. With the electoral college, they at least have to go to several states to do that....

What this really demonstrates is what the Demoncratic party is all about - whine, cry and sue if you don't get your way. No wonder America is in dire straits...

Seems the chickens are coming home to roost! The Haitian population says they were INTIMIDATED in to voting for Gore. Seems that Gore supporters wen IN to the polling places and told the Haitians what number they HAD to punch.

Wisconsin - Bribery of homeless people to vote for Gore and in Democratic precincts 2 ballots passed out to each voter.

New Mexico - 1400 ballots missing with the vote difference down to 105 votes.

Once again the Dems have tried to steal the election as they did to Ford and Nixon and thanks to Al Gore they are going to be found out....

Actually, if you saw the interview with Clinton revealing his thoughts on the matter, he literally laughed out loud and had to stifle himself. He believes it to be quite folly. Nah, I don't think Clinton REALLY gives a rats behind about this one. He's gonna hit the circuit and make more $$$$ and be more popular, post presidency than Ronnie or the big shrub! Just my projection!

It's not a democratic thing, it's not a republican thing, it's an American capitalistic thing with crooked ties so deep on both sides that all one party is worried about is what the other one is up to. The focal points that used to be pertinent, and should still be, are no longer recognizable.

Not only that, but does anyone think ANY candidate would even visit the smaller states without the electoral process? They wouldn't. There are too many alterations to the law as it is. Don't screw with the way the principles in the country were designed. Start messing with the Constitution and I'M gonna start sounding like Dave or Debby! (well, at least on some things.)

Question! For you all... I was quite the CB'er a ways back... a few years ago decided to buy some pretty decent equiptment and get back into it. Unfortunately, the airwaves are pretty dead nowadays here, and the internet has replaces my outlet for chatting. This leaves a mint-condition hardly used Pro-Star 497, modified and optimised by a local quality tech, sitting in its' origional box in my closet. A nice black-based black-head T-UP9 mint D-104 sits beside, in its' respective origional box. I won't even ask about the Antron-99 I bought at the same time that's on my roof- I'm pretty sure prices are below 30$ for a "used" Antron. My question is; If I were to sell this equiptment, how much (aproximately) would it be worth? I realise it depends on area etc, but how about an average? Maybe the last one you've seen sold?

The unit (for the unfamiliar) is a full-featured 10 Meter AM/FM/SSB base/mobile rig that has been mofified to cover 25.165 to 29.690 MHz. I used it primarily as a 454 channel CB. Manuals, mod info/instructions are all present. All work was done by a local 20-year tech which I can provide the name etc of. The D-104 (as I vaugely recall) is some sort of special edition, being smooth black on base and head. I know the unit has been tweaked in both wattage and modulation, but have no meter to measure its' full capabilities.

I've rambled enough, no one's reading this far into the post ;) Any ideas would be helpfull, thinking of putting this up on eBay. Thanks in advance!

As I have noted before, I doubt the 25-30 MHz spectrum would get a bid of more than 27 cents from any commercial bidder. The place where the fit is hitting the shan is in the 700 MHz region. TV channels above 51 are no longer assigned. If my trusty formula for the top of the channel is correct (((channel - 13) * 6) + 470) so the top of 51 is 698 MHz. They had gone thru 70 or 812 MHz. The ones thru 82 are cellular for the most part already. So 114 MHz are being auctioned with the TV stations in them. How's that for a merry circle jerk.

Our illustrious Republican Congress GAVE each TV station a second channel for HDTV so things are a tad tight. Several things have developed since:

a) it appears that the two are incompatible on the same channel. The range and destructive power of a digital signal has, for example, caused a Milwaukee station to mash an analog station across Lake Michigan. It also appears that digital transmitters are as broad as a city bus.

b) The 114 is about a third of what may be needed.

c) Telcoms can't raise a dime and most banks are trying to offload telcom debt under some regulatory concern. The Brits and Germans stole the money so an auction might not raise a whole lot of centavos.

d) TV channels 14-21 in big cities are occupied by extensions of the 450-470 UHF commercial band. Called S and T bands for reasons unknown to me. There may be some pressure on nearby parts of the spectrum to relocate these users to reclaim the TV channels. Only the 430-440 part of the amateur 420-450 band is internationally protected.

Long and short, I don't think anyone gives rat tits below 76 MHz. And not a whole lot more until you get to 400 or so.

Hopefully it didn't do anything but burn a trace off of the pcb (If a protection diode is still in the unit). If you open the unit and look around, the burnt trace should be obvious. You can jumper out the burned trace, (make sure the diode isn't shorted first) hook the unit up correctly this time and if you are lucky,away you go!

It'll work.

> I am going to use #4 wire.

Okay.

> As for the relay idea, that would only provide protection when the key
> was off, right? If the relay was on, and something shorted out when you
> were running down the road, there isn't going to be a fuse to blow?

If you're concerned about that, add a dash switch to override
the ignition switch and open the relay. The relay saves you
money, has less resistance than any fuse arrangement,
unloads the transistors when the ignition is off, and, with
a dash switch, provides a remote control function.

> > Connect it to the end of the negative battery cable
> > opposite the battery (engine block).
>
> Is it better to run the ground all the way back out through the firewall
> to the engine bay?

Yes.

> I am mounting the amp under the seat, whats wrong
> with using #4 to where the seat bolts to the bottom of the cab?

You may create a ground loop.

> If I
> scrape off paint and make a nice solid connection here, is this ok?

Only if you're *absolutely* sure there is a path
back to the battery that has no more resistance
with 40 amps running through it than there would
be by actually running the ground wire to the
engine side of the negative battery cable.

> I
> can tell you the cab is connected to the frame with quite a few heavy
> copper wires from the factory. I suppose this not be a good idea, but
> all the car stereo amp places say to make the ground short. It would be
> a long run out to the engine.

See above. By "make the ground short" the car
stereo places mean "keep the resistance to a
minimum."

> Also, how should I connect the wires coming out the Amp to the #4 wire?
> The wire out the amp is #10. I suppose soldering would be best, but
> would make it a pain to remove if I needed to. Is there a low resistance
> connectors that I could use here?

Yes. Electric forklift connectors are pretty common,
as well as the gold-plated "pretty boy" connectors
available at the car stereo places and Radio Shack.
A no-nonsense way to go is to make a heavy terminal
block out of a good insulator and bolts. Then you
simply put heavy "eye" connectors on both the amp
and supply sides and bolt them to the terminal block.

With anything other than soldering, it's best to run
the amp for awhile and check for heat (resistance)
at all the DC "joints" to make sure there's no excess
resistance.

> Thanks.

You're welcome.

> Scott.

1/10 of what it's supposed to put out is a good
place to start.

> Will feeding it with 200 available amps keep it happy ??

The rule is 20 to 25 amps per transistor.
If you're running it easy it won't draw
as much. Other reasons for lower current
draw below.

> What would you suggest for a 16 pill drive (rms) ??

See above.

> Will 250 available amps take care of it ???

If you don't push it hard, or if it
uses devices that require less current
than 2879s, or if you're volting it but
not expecting an increase in output over
normal voltage.

The power transistors have open base-emitter juntions
now. Replace the transistors and it'll work again.
You should be able to get it fixed for around $60.
Cut that in half if you can do the labor yourself.
If the rest of it is in decent shape, it's worth it.

HOW can yo talk skip when the Ionosphere is not skipping? Do yo skip off yo ICE covered apple trees (with Hillary under them)?
Dave!!!!

COLD as ICE wrote in message <20001110143853.24525.00000221@nso-co.aol.com>...
I posted this about 2 years ago to help explain the concept of the Superbowl.
My good friend Shadow on www.bigradios.com put it on her website!!!!
Here it foes again for any of the newbies that still dont get it!!!!!

If there are 10,000 CB'er's on the SuperBowl...
then out of 10,000 only 1,000 can be heard some of the times...
and out of 10,000 only 100 can be heard most of the times....
and out of that 10,000 there are probably only 10 of the most well known guys that talk on the SuperBowl and can almost talk skip when they want.....
This is a great example why the bowl is not for the weak!

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't mean a THING if you ain't got that SWING!!!!!!!

Good post, Handy! Francis CB 26 over ANY wilson. Also I have 1 108" whip left for sale, NO spring needed! Also DO NOT buy COBRA (made in China junk).
Dave!!!!

Handy Andy wrote in message ...
Greetings!

That depends on cost...

If the skys the limit, then the only limitation is the "CB" part...

The best set-ups are simple ones - the 3 main parts,

Radio -

For a base, try a Uniden Washington, or perhaps a Cobra 142 GTL [no longer made but are still around]

Mobile? Grant LT or Grant XL

Antenna?

Wilsons are pretty good, but length of antenna is important. The longer the better, a 102" whip, Shock Spring, and ball mount are the best for the long run in durability and signal reports.

Wilson is ok, but geared for those that don't want a 102" monster making their car look like it's remote controlled.

Firestik and Francis are good contenders for Mobile use.

Base antenna? Gawd - this can cause flames to erupt but A-99's are still popular as well as many others. You'll need good mast pipe and tripod, or tower sections to lift that baby into the air.

Connect up this "Hi-Po" miracle of antenna with good quality coax with pre-molded and sealed ends to keep out corrosion. RG-8 or RG-213 is good "general purpose" coax that will last a long time. Just don't splice in patch cords otherwise you may lose signal quality in both reception and transmission.
Coax

On 09 Nov 2000 18:45:55 GMT, while the modem was pondering it's navel, kel620@aol.com (Kel620) dissertated the following:

:+> What's the best CB radio, antenna, mircophone setup?
:+>
:+> I've heard that the Cobra CBs are good and the Wilson Antennaes.

Regards!

Yep! Been that way for over thirty years. My first R/C system for airplanes was on that very frequency.

Does this mean I have to be careful my 20 lb 120 mph airplane might lose control and hit your car?

B-Squared
"dan" <shumd93c@onyx.pvcc.cc.va.us> wrote in message news:3A0A3983.E5732074@yahoo.com...
I recently saw a RC truck at the local mart. It had a sticker on it that said it operated on the freq of 27.145. I've seen on the RF man's site that there are "model control " channels around that part of the band. Does this mean that there is a chance of interference between me and a RC fan operating at the same time?

that is indeed neat jerry. during the last cycle while i was still quite young there was a gentleman from england working on 11 meters with a hr2830, 25 watts, and a inverted v on a corgo ship. i talked to this guy tom about 5 different times while he was in different parts of the world including the south atlantic and the south pacific a day or two later when he made it around the tip of south america. the ship was too big for the canal so they have to go around. i think the contact i enjoyed the most though is when he was in the port here right by my house. a friend of mine that lives on the gulf side talked to him till he was about 100 miles out to see. those supertankers are high up and between all that metal on the ship and the ocean water it makes the greatest ground plane ever. those were all neat contacts. i also enjoyed speaking with peter 130sd101, the only operator on norfolk island today at 12 noon with a good solid 5/5 to 5/9 signal. it was strange to catch the south pacific at such a early time on 11. at the time i'm writing this i'm still hearing them call away for stateside.

If it is indeed as you state, then there is only one explanation. You have
rf currents on the outside of your coax. Coiling it reduced those currents.

This means that the outside of the coax is acting as part of your antenna
system - NOT usually desireable. It also means that your antenna is probably
not resonant - although the coax/antenna combination may be.

The current on the outside of the coax can "fool" an SWR meter into giving
an inaccurate reading - either better or worse than it actually is.

The currents can come about in two ways. 1) coupling of rf from the antenna
to the coax 2) current flowing from the inside of the coax braid to the
outside (due to a mismatch between the coax and the antenna).

I'm wondering if you made yourself a lousy choke balun by coiling it
like that. Good question.

Best setup is the one that gets you on the air! It honestly depends on what you want to do. If you're looking for "sky's the limit" in radio and have mega bucks to spend, start looking at amateur radio. As for me, I'm having a blast with my $35.00 Wal-mart special and a wire tossed out the 2-story window. The other posts here are great starts, pick and choose the features you want, and go for it!!!

Mr. The world is out to get us all,

Obviously, this has generated replies. I myself found my post to be quite humerous. I was attempting
sarcasm directed at those who ask this question all the time, instead of taking it to someone who
KNOWS something about radios.

Oh well... I suppose everyone is just still uptight about the election.. Actually, Dave, this
situation must just have you all worked up huh? Is it Russia's communism at work? Or is
it Japans fault?

You will get very poor performance from a gutter mount. A Wilson 1000 or 5000 mounted on top of the cab will do a much better job. Dont forget to tune it for best (1.5 to 1 or better) swr.

>well...from what i hear i should look into buying a new antenna>

WRONG!!! One that'll cause a shit load of QRM for BRUCE BEYNON(Extra)
so he can't hear nothing. Fucking HAMs...

Get a Uniden GrantXL. Get a solid ball mount. Get a 102" steel whip
and a 6" spring. Get some good RG-58 coax (or RG-213, 214, etc.).
Tune everything in and go from there. Then drive by Bruces' house and
yap all day and all night long so he can't hear shit. Thats only if
you live in Louisiana...

According to the same logic "well, the triple 5 isn't used anymore" you could actually believe that if you can't hear anything on, say 14.010 on twenty meters, the CBers could come there - the coverage is a lot better than on 11 meters, right? Then you could work the world, even after the present sunspot maximum has faded 11 meters to local communication only. OR I could come to 27.555 with my ham setup which has a bit more gain than your average CB station, and you wouldn't mind, eh? Gary

False.

http://www.salon.com/politics/feature/2000/11/10/nixon/print.html

The fallacy of Nixon's graceful exit

In 1960, the GOP candidate fought hard behind the scenes to make sure the election wasn't stolen from him -- just as Al Gore should do.

By Gerald Posner

Nov. 10, 2000 - One of the most oft-repeated myths in the aftermath of the current presidential election disputes is the claim that Vice President Al Gore should behave more like Richard Nixon, who is cited frequently for having graciously decided not to pursue legal remedies in response to possible voter fraud that might have cost him the 1960 election with John Kennedy. But the notion that Nixon graciously exited is just false.

The 1960 race was unquestionably close. Some states -- like California -- initially fell into Kennedy's electoral count, but were reversed almost two weeks later after absentee ballots were counted. But the core questions about the election centered on rumors of fraud, primarily in Illinois, where Democratic Mayor Richard Daley's powerful political machine controlled voter-heavy Chicago, and Texas, where vice presidential candidate Lyndon Johnson was a senator. Rumors of impropriety existed before the election. After the election, when Illinois went for Kennedy by fewer than 9,000 votes, and Texas by just over 40,000, Republicans cried foul.

Nixon was worried about how to challenge the vote and still not be branded in history as a "sore loser." Although he would later claim that President Eisenhower encouraged him to contest the election outcome, that was not true, as the outgoing president withdrew his support for any challenge within a day of the vote. Yet, contrary to modern memory, Nixon and his Republican allies still mounted a massive vote challenge.

It is true that Nixon did quickly concede the election to Kennedy. And while he was careful not to put a public imprimatur on the concerted Republican effort to challenge the election results, he privately not only authorized it, but actively encouraged it.

A conservative journalist and close Nixon friend, Earl Mazo, of the New York Herald Tribune, launched a press frenzy over possible voter fraud. (He was later Nixon's official biographer.) And not only did Republican senators like Thruston Morton ask for recounts in 11 states just three days after the election, but Nixon aides Bob Finch and Len Hall personally did field checks of votes in almost a dozen states.

The Republicans obtained recounts, involved U.S. Attorneys and the FBI, and even impaneled grand juries in their quest to get a different election result. A slew of lawsuits were filed by Republicans, and unsuccessful appeals to state election commissions routinely followed. However, all their efforts failed to uncover any significant wrongdoing.

In Illinois, for instance, the final recount showed that Nixon's votes had been undercounted by 943 -- yet, in 40 percent of the rechecked precincts, it turned out that Nixon's vote had been overcounted. (Contrast this with Gore, whose vote total steadily climbed during the Florida recount.) Unhappy with those results, Republicans went to federal court, where their case was dismissed. They then appealed to the State Board of Elections, which also rejected their claims. It was not until Dec. 19 -- over a month after the election -- that the national Republican Party backed off its Illinois claims.

Similar results, and extended fights, took place in Texas and New Jersey among other states. In Hawaii, Republican efforts had the unintended result of reversing the state's electoral votes from Nixon to Kennedy.

Although Republicans continued to insist that Illinois and Texas had somehow figured out a way to cheat and still pass a recount, they never produced hard evidence of widespread impropriety. Yet, that was certainly not for lack of trying. For over a month, the Republican efforts were aggressive and widespread. That Nixon was clever enough to allow his aides and political friends to do the work on his behalf -- while officially seeming to remove himself from the fray -- should not let Americans have amnesia about what really happened in the wake of the 1960 vote.

If the current rallying cry of Republicans is that Al Gore should behave like Richard Nixon did in 1960, that is precisely what he is doing -- strongly making every effort to ensure that the final vote was fair and correct.

Source record: 58794

Fred:

You're saying the carrier point of the sidebands is determined by the
audio frequency of the input? Wouldn't that make it FM?

I could be wrong, but then again, what do I know, I'm just some
dumbass truck driver. <:-{)>

-SSB

On or about Fri, 10 Nov 2000 13:41:30 -0500, "Fred Hambrecht"
<Fred@w4jle.com>, using the forum rec.radio.cb did say:

:What you say would be true, only if the carrier were being modulated by a
:1500Hz signal. In reality when and audio signal is mixed with an RF signal
:the result is the Sum, the Difference, and the two original frequencies. if
:the modulator were capable of passing a 1 Hz audio signal, the two sidebands
:would appear 1 Hz above and 1 Hz below the carrier. When a signal is
:overmodulated the carrier is cut off and generates in addition to the normal
:audio sidebands, spurious signals that appear many Khz either side of the
:carrier. You have probably observed this as splatter or "Washing".
:
:"sideband" <sideband@cac.net> wrote in message
:news:osco0to8ov9nj8hjh6qkhn2352ko4oup74@4ax.com...
:> On or about 10 Nov 2000 16:10:20 GMT, riradiobuff@aol.comspamsux (Andy
:> in RI), using the forum rec.radio.cb did say:
:> :Now why are you going and giving false info? The frequency is the same
:> :regardless of mode...
:>
:>
:> Wow... You just showed your ignorance....
:>
:> AM and FM have their carrier (or center frequency) on channel 40 on
:> 27.405 Mhz.
:>
:> AM has 3 components. the carrier, on the "center slot" frequency,
:> Upper Side Band, and Lower Side Band. The USB and LSB are where the
:> audio is, and the carrier is used by the receiving radio as a
:> reference point.
:>
:> The USB is 1.5Khz above the carrier, and the LSB is 1.5Khz below the
:> carrier.
:>
:> So when you're transmitting AM, you're actually transmitting on three
:> separate frequencies, very close together, simultaneously. And you
:> wonder why a rig doesn't swing as much on AM as it does on SSB?

:>
:> AM takes the modulation and varies the output power on the sidebands,
:> varying the amplitude of the transmitted signal. That's why it's
:> called Amplitude Modulation.
:>
:> FM takes the modulation and varies the transmit frequency of the
:> transmitted signal. That's why it's called Frequency Modulation.
:>
:> So the prior post was only slightly incorrect....
:>
:> 27.4065 USB
:> 27.4050 AM & FM center
:> 27.4035 LSB
:>
:> Hope this fills in the holes.

Thomas Edison describes in his patent application for the wireless telegraph in May of 1885 as follows;
For receiving signals I locate in said circuit between condensing surface and the ground a diaphragm sounder which is preferably one of my electro motograph telephone receivers.

The first wireless telegraph picked up the telegraph signals with a loud speaking telephone. De Forest patented his triode in 1907 twenty two years later. For his first radio he used an Edison loud speaking telephone.

Edison's Patent and an essay about wireless transmission can be seen on my site at www.geocities.com/starapex Click on the radio

Cheers
Ken McKenzie

Since mentioning HDTV, isn't there a mandate or something maintaining all television units manufactured after a certain date (I think in 2004 or 2006) be HDTV? Man, I can see the clusterf*@# this is going to bring about if they are already having problems with digital signals in the spectrum.

An idea he undoubtedly took from Nikola Tesla.... Edison, although a brilliant inventor, was heavily backed by American Investors. If you look at the patent records , you'll find that Tesla was INDEED the 1st to tender a patent for 'wireless transmission' of information.... when 'Show-me-the-money' Edison applied for the same radio patent a few years later, Tesla's was tossed aside and the patent awarded to Edison.

Nikola Tesla was employed by Edison at one time... at a time when Edison was still expounding on the virtues of DC power generation. It was Tesla, NOT Edison that VASTLY improved power transmission and generation using AC... It is Tesla and not Edison who should rightly be accredited with being at least the 'Father' of radio, if not most of everything we know as modern electronics.

==========
300 -350 rms would be a good place to start.
I have used a 200 amp alt with a 12 pill and it works fine and saw god watts

>
> What would you suggest for a 16 pill drive (rms) ??
> Will 250 available amps take care of it ???
==========
drive for a 16 pill try 400 -450 or a good 5 pill
yes you could run a 16 with 250 amps it also depends on the design of the
amp because the effieciency would matter a 16 pill texas star will draw far
more than a davemade,xforce design.I don't know where this 20 -25 amps per
pill comes into play that seems rather high to me with no mention of what
voltages are being used then it is just a stab in the dark . If it is a
class c amp 15 amps per pill is more like it .

4939. Re: SSB Offset question and Superstar 3900 clarifier question

Newsgroup: rec.radio.cb
Date: 2000-11-11 00:00:00 UTC
From: riradiobuff@aol.comspamsux
Message-ID: <20001111112100.07125.00000884@ng-fd1.aol.com>
Source record: 58868

The fact is when you want to tune to "channel 40" AM, you go to 27.405. When you turn your switch from AM to USB, you are still on 27.405. When you turn your switch to LSB, you are still on 27.405. When you turn your switch to CW, you are still on 27.405.

If what was said is true about the different modes operating on different frequencies, then everyone would be adjusting their transmit frequency when they changed modes and this is not true. SO - do not give out false information and make people think that when they change modes, they have to adjust the frequency on their radio. That's what the original question and reply seemed to imply.

You might want to add Edwin Armstrong to the list. DeForest invented a
triode but it became apparent later he really didn't have a clue what he
had. Armstrong made them sing; regenerative detectors, superhet receivers,
and FM to hit the biggies.

intelligent and a class act, boy i wonder where some of these idiots have been sticking their heads the last 8 years or so. why would anyone vote for a woman who just recently moved to new york so she could run for the senate. this bulldike woman has violated every tradition followed by every other american president. now you new yorkers have voted her in and so now she is moving to the watergate hotel. geez, i wonder who is going to pay for that big house they bought, hmmmmmm?????????? , considering old bill is moving west to pacific palisades. the watergate is a good place for her, considering she is into dirty tricks, her and corporal cue ball will be a good team. as a senator she will do absolutely nothing for new york , only for herself. so congratulations new yorkers, you have perpetuated this clinton thing. boy i just wish they would go away. now slick's number 2 is trying to steal the presidential election. will it ever stop with these people???????? its amazing to me, how these people can actually look themselves in the mirror each morning much less get a good night's sleep. so, thanks new york. i was hoping you all would do the right thing. but you asked for it and you will get it. a very strange and unproductive 4 years from one of your senators. but heck will be good fodder for the conservative talk shows. the dumming down of america continues . as traficant of ohio says, beam me up scotty, i have seen enough,.....curious d, sometimes called radio god, one of the 10 percenters on dc, one of the 1 percenters on ac is back quiet , readin da mail

Steve,
If the two batteries are in parallel, it wouldn't make
much difference. Which is easier to 'get' too? If they
are operating in different systems(?), then you have to decide
which system could stand the extra draw.
'Doc

yes but what does mosaic law have to say about it, and there is no way anyone can compare the killing of innocent babies with the death penalty. listen if you knew what crimes these people who are on death row have done and seen and talked to people associated with it, then you would ask yourself why it is necessary for them to breath my air, dig it? as a taxpayer you have to ask yourself while you are dealing with such a worthless human being and believe me there are some that will never be anything but that, why is it necessary for me to furnish this pig with a good place to sleep and three meals a day for the rest of his life, after what he or she did. well the answer to any thinking individual is obvious.so please don't make the incorrect analogy between abortion and the death penalty. there is none. cd is out......

Didn't he say he would concede if the recount showed him the loser? If he did say that, it is yet another lie. Of course he wouldn't call it a lie since they have to keep recounting, and recounting, and recounting until they come up in his favor.

What is really amazing is how American's are taking such a stand on this. Although this may be an oversimplification, we are fighting over:

- Whether we get to keep the money we earn or give it to the government
- Whether we get to keep the right to defend ourselves
- Whether we get to kill our babies before they are born

This is absolutely amazing!

Killing to show killing is wrong? You forget one major premise: those that are killed in prison have done something to deserve it. Those killed in the womb have done nothing to deserve it.

That's not what HE said. 8-)) He just wants to get away from all the crap on the standard 40 channels. Seems he has a small problem with people jamming his signal. I can't imagine why anyone would so such a thing. Of course if he is operating out of band and using a mode not allowed, he's got nobody to complain to, so he just has to get used to it, like it or not.

Who made you judge who dies and who doesn't? If even 1 person is wrongfully executed, the system has FAILED! You don't get to pick and choose who to kill, killing is killing is killing. You cannot have your cake and eat it too. But I do understand this flawed logic allows your conscience to rest easy when someone is wrongfully executed.

As far as what type justice? Eye for an eye? Well, I think justice would be served by allowing the victim's family 15 minutes in a room with the perp. If they kill 'em, fine, I just don't like the blanket approach. Much rather have that degree of vigilantism in there. Yea, I considered seceding the state CD, but as you say, an elite, but underepresented group seem to be pulling strings. I'm all for a secession since Fla was forced into the union, as we never surrendered. Then the country can get whatever pres. they deserve and we can start farming and hunting and trading again utilizing the barter system, but the damn Haitans gotta go back to Ga. since Carter allowed them here to be part of the deal. Hey-dunno what them guys are doing on the east coast of the 'pile.I'm on the west side and it's almost like two separate countries!

a few years ago they had a case like that in louisianna. some guy raped this guys daughter and killed her and fled the jurisdiction. well they caught him and a couple of detectives were walking him to their car in the new orleans airport and the father calmly walked up to them and shot the bastard in the head. justice served , justice carried out. and you know what. i would do the same if such a thing happened to me or my family. this i promise you. i would feel real good about it while doing my time too,.....cd is out.....

believe me when i say this. i am just kidding about blaming you new york guys for all practical purposes. it is just wierd how the jews whine about her comments and her actions , etc, etc but when it comes down to nut cutting time, they all vote dem, i just don't understand it. you know these guys make good money and they are getting tagged big time for taxes brought on by these big government types, and it is just amazing. and to tell you the truth, i believe with out a shadow of a doubt, that this bulldike bitch and her husband are a bunch of commie bastards that should be hung for what has gone on in their administration. this selling of our nuclear secrets to the pla is just beyond the pale of my understanding. they both and that includes algore are guilty of treason. i don't think most understand the damage that has occurred while on this punk's watch, but it has been disastrous. i believe in payday someday , but boy i sure would like to get in a couple of licks myself. God help us, because it is just that bad. and if anyone doesn't believe me, then they are living in a fairytale land of make believe and have their heads stuck in the sand. just like a senator from tennessee said, we will have to have the chinks drop one on us before these idiots wake up. and that my friend is a shame. i think it is extremely unfortunate that so many refuse to be good citizens. but the dumming down of america continues. God help us, cd is out.....

>>I think justice
>>would be served by allowing the victim's family 15 minutes in a room
>>with the perp. If they kill 'em, fine.

LOL !, that kind of what happens here in Long Island.
When ever a perp is caught red handed robbing someone's house or boat people keep beating the shit out of them, till the cops come, then have the sheriff or cornier take whats left away
Guess what ?
Them creeps dont take the Long Island railroad out from the city here to graffiti and rob anymore.
Thats how that animal Colin Ferguson was stopped (citizens grabbed him), to bad he did kill a couple people first.

twistedhed@webtv.net wrote in message

Never claimed there were any..I said if..but since you challenged me...there were plenty released after years on death row who were found innocent...how would YOU want compensated? The most recent came from a College law class just this year from Ohio, I beieve, and made it a class project and freed this guy after umpteen years wrongfuly incarcerated on death row,for a crime DNA exonerated him from. And that's just ONE that was scrutinized at random. So, you tell me if the odds are fair?

Most definitely.... we could go on and on with this subject. My point was simply that history seems to have forgotten Tesla... without AC, modern electonics, radio, telephone, and affordable electric power would ot exist. Edison pretty much 'stole' Tesla's patents.... backed by big money, Tesla never had a chance against Edison.

There is a few people that are on the SuperBOWL that I can definitely understand...

- BRASS in the BYU

- Big Thunder... No Numbers in Virginia

- The Oldman sittin' in the Wheel Chair

-1-800 Toll Free

- Body Snatcher

- Whippin' Boss

- Al Green (if he's still around)

...and a few others that I can't recall off the top of my head right now. And they aren't African-American. If you can't understand these few big radios, you ain't listening. 1 and 2 KW amps? Those are drivers...

Hello Mr Big, and to anyone else who supports the Super Bowl and what it stands for.

First of all, Mr Big thanks for the praises about my radio station.....I appreciate it, But you must realize that you just put me out there for all of my friendz on the Northeast Corner to take shots at me. But thats ok.....I am ready for the challenge, Thats what CB competition radio is all about.

Thanks to Punisha413, IceCold NY, and the others who try to explain to some of those people who will never ever learn or understand what the Bowl is all about.

To the person who seems to be so much in love with SSB, and wants to talk about that all he hears on the Bowl is Gibberish.....Damn, where did you come up with that word? I thought that word went out of style with High Button shoes.

Myself and everyone else on the Bowl have talked on and continue to talk around the world on sideband when we get into the mood, Your not telling me nothing about SSB, because I know all about it.

But.....Let me explain something to you that you seem to lack.....That is competition. Most real men love competition, they thrive on it, some excel on it.....But no real man runs away from it. The Super Bowl is radio competition at its finest.....It doesnt get any better then this. There isnt any competition in SSB.....You can talk around the world with 50 watts.....WOW!!!!

Do you honestly think that there is not one person on the Bowl that if they went to SSB, and keyed up their power could and would cause worldwide havoc. Thats a wonderful thought isnt it.....A Super Bowl Sideband Channel.....Would you be ready to join in the competion then? I really dont think your ready to hang.

The real problem with you and people like yourself that dont respect the Super Bowl is envy.....You want to join the competition, and the fun, But you are too cheap to spend a few thousand dollars to do it. So in the meantime have your fun on SSB(which in your case means Sidewalk Sissy Band).....Continue to have your little proper and ettiquette conversations on how the weather is across the world(Ever heard of the Weather Channel?....duh....)and whatever you find to talk about that you find exciting.

Get it in your mind Super Bowl Six is here to stay.....and its not for the weak to try to come out and play!!!

Happy Thanksgiving to all my CB friendz!!

503 New Jersey

Newsgroup: rec.radio.cb
Date: 2000-11-11 02:11:48 UTC
From: Bill Nelson <billn@spock.peak.org>
Message-ID: <8ui9t4$no1$2@bashir.peak.org>
Source record: 58760

Fred Hambrecht <Fred@w4jle.com> wrote:
: Seems the chickens are coming home to roost! The Haitian population says
: they were INTIMIDATED in to voting for Gore. Seems that Gore supporters wen
: IN to the polling places and told the Haitians what number they HAD to
: punch.

Since when did Haitians have the right to vote in US elections?

: Wisconsin - Bribery of homeless people to vote for Gore and in Democratic
: precincts 2 ballots passed out to each voter.

: New Mexico - 1400 ballots missing with the vote difference down to 105
: votes.

: Once again the Dems have tried to steal the election as they did to Ford and
: Nixon and thanks to Al Gore they are going to be found out....

No one knows, yet, what poll workers for both parties in various precincts
may have done that is illegal.

However, it is unlikely that two ballots were passed out to voters - seeing
that every polling place that I have been in has monitors from at least both
of the two major parties, and sometimes even from the smaller parties.

There may be some fraud that turns up. It would surprise me of no one from
either party attempted to cheat the system.

Two analogies:
Last week the Redskins lost to the Cardinals. The skins dominated the clock, total yards rushing and passing, but lost the game due to irregularites in special teams return coverage and wind velocities during offensive passing. Therefore they should either replay the game or sue the Cardinals stadium and NFL.
Last week I played the lottery. When the numbers were announced, they were my winning numbers!! Uhoh, that damn confusing lottery submission ticket was so confusing, I inadvertantly marked different numbers from what I intended. But I STILL WANT MY MONEY!! I'M GONNA SUUUUUUUUEEEE!!!!

Depends on the damage done. If the pills are cooked, you might get
more damage just by opening up the box (beryllium).

Thanks I looked in the box and i can see what looks like three diodes that are cooked two of them go to the pills from what looks like the power transformer? and another one is cooked near what looks like the power transformer also? Can i jumper all of these without messing up the performance of the box? I am not a tec but i can use a soldering iron. I hate to spend the money getting the box fixed cause it would cost me more then what i sold it for.Thanks

Where does it say below that hams will loose space even though that may be what will eventually happen....whats wrong with making all these new companies use high up UHF frequencies...I doubt it if they want HF anyway..they need crystal clear operation for new usages...force them into 10 ghz and all of that..

History would prove you wrong on at least 3 similar occasions. The Nixon/Kennedy when Billy Daily's dad stuffed the ballot boxes in Chicago. Next When Ford got robbed of the election. Both men accepted the results for the good of the country knowing they had been robbed. More recently in Mo. when a dead guy gets voted in as senator by the population of St. Louis intercity types who had open the polls on the previous Sunday so the brothers and sisters could vote on the way home from church, next kept the polls open until midnight by first getting a Dem judge to keep the pools open, and then ignoring the judge that overruled him. As someone past the age of 60 I have lived through all of these debacles and I can tell you the Republicans have class! What was the response of the Republican in spite of knowing about the fraud in St. Louis? He conceded the election. I think that Gore feels he can get GWB to do the same thing...

: The message was essentially a warning, broadcast on 10m in AM mode, for
: the benefit of unlicensed stations.The 10m AM broadcast by the FCC (30 over
: 9 at my location) was Riley Hollingsworth's voice in a beacon-style,
: repeated, message along the lines of..."This is an FCC monitoring station.
: Unlicensed operation on this band is punishable by fines, etc and causes
: interference to licensed users. Citizen Band type operation is only legal
: between XX & XXMhz (insert CB band edges). Unlicensed operation in this band
: must cease immediately"

I doubt if it was a broadcast by the FCC - as the FCC generally does not
make broadcasts except in an emergency.

It would be some Amateur station making the broadcast. If the message
was legally sent, the Amateur would identify his station at least once
every 10 minutes.

By the way, how do you know it was Hollingsworth's voice?

sideband <sideband@cac.net> wrote:
: Fred:

: You're saying the carrier point of the sidebands is determined by the
: audio frequency of the input? Wouldn't that make it FM?

No, that is not what he is saying. The sidebands do not have any "carrier point". In AM, there is a carrier, which has a sideband on each side of that carrier. If the modulation consists of a single tone, then the transmitted signal will consist of the carrier, a signal at a frequency below the carrier that is equal to the difference between the carrier frequency and the tone frequency, and a signal at a frequency that is equal to the sum of the carrier frequency and the tone frequency. In this case, those two signals will look exactly like carriers (as they are single rf frequencies).

With a complex waveform (like speach), there will be two sidebands that cover a range of frequencies - one sideband on each side of the carrier. There is no "center" to these sidebands - as their location depends on the bandwidth and frequencies that are providing the modulation.

That's what the LSB and USB carrier point offset adjustments are for, silly. When people change modes, the radio automatically takes care of the offset.

Go on thinking the way you're thinking... to the user, it doesn't matter. If the radio is properly tuned, they will be on the proper frequency.

But the techs know differently.

-SSB

On or about 11 Nov 2000 16:21:00 GMT, riradiobuff@aol.comspamsux (Andy in RI), using the forum rec.radio.cb did say:

:The fact is when you want to tune to "channel 40" AM, you go to 27.405. When
:you turn your switch from AM to USB, you are still on 27.405. When you turn
:your switch to LSB, you are still on 27.405. When you turn your switch to CW,
:you are still on 27.405.
:
:If what was said is true about the different modes operating on different
:frequencies, then everyone would be adjusting their transmit frequency when
:they changed modes and this is not true. SO - do not give out false information

Source record: 58937

Bill:

I think we're saying the same thing, here, only we're thinking about it differently.... I only take umberage with the varience of the frequency of the sidebands....

Being there is no carrier to reference on LSB and USB, how would the receiver be able to clarify an LSB or USB signal... WIth the clarifier? No.. the clarifier sets the frequency the radio is tuned to. So if the frequency of the transmitted signal changes with the modulation, the receiver wouldn't know how to decypher it into intelligable audio.

It's the power that varies with modulation on AM, LSB, and USB, not the frequency..

In the Sams Photofacts for the 148, in the alignment procedures, VR4 is the Carrier Balance for SSB. L 59 and L 22 are the carrier point adjustments for upper and lower sideband, respectively, and guess what? They're 1.5Khz above and below the adjustment for the carrier point on AM (l 23) respectively....

Now tell me I'm smokin crack.

hey put the damn haitians back on their leaky boats and set them
adrift. come on florida do the right thing. we are thinking about
ceceding in texas as well. i wonder what kind of deal we can make with
the mexican government. heck they think we stole texas from them
anyway. they may have a point. as far as i am concerned. i say boo coo
parley . lets go to the tent of meeting and see. pass around the peace
pipe and see what kind of deal i can get consider i am getting a raw
deal from my so-called government. as long as they don't send santa
anna jr. up here raising hell and they let me talk on my 50,000 watt
base station and put all those american mudducks on the back of the
bus, no doubt about it. and by the way twist, geez a hand count. oh
really. this stinks. what's al gore going to do? keep counting until
he finds the necessary votes to win. what a man . what a leader. what a
country......cd is out........

>
>

well anytime a innocent man is sent to death row, it is because of lazy
police work and a lousy district attorney with no scrupples or ethics,
and there are some of those out there. but if i was a investigator, i
could not do such a thing , knowing full well the consequences of my
actions, even though it might make me look good. no a iron clad case is
the only way to go and the only way to send somebody up to death row
and i think everyone of those good buddies that have been rehabilitated
by senior jorge bush have deserved it and that is my roger,...cd is
out......

Greetings!

I take it you own a deisel...they use the batteries in tandem for the starting and glo-coil pre-heat needed for the injectors, but it's pretty much a 12V system either way...

Check the battery cable routing - you should arrive to a terminal junction that allows the alternator to charge both batteries at the same time.

Most of the time the batteries are charged equally and via this same terminal point. For best results, verify that this terminal also has the main engine block buss feed. This "feed" is the one that also has the alternators main output terminal connected to it.

That is your amos attachment point. From there both batteries should discharge into the terminal equally.

Some deisel engines use a battery that sits float charged all the time and is only a reserve for starting. These set-ups use a diode isolator and you can verify which battery is used by the electrical system by turning on the lights and wait a few minutes, while the lights are on, check voltage using a DVM - the one with the higher voltage is the one that is sitting idle. You can use this battery to offer a boost to your amps current needs.

However, I recommend that you use the terminal that is the main feed that has the alternators main terminal attached to it.

You and your engine will suffer less. Discharging the batteries unequally creates a charging system problem with low voltage and a possible fried battery in the process.

On Sat, 11 Nov 2000 05:16:00 -0500 (EST), while the modem was pondering it's navel, Limey007@webtv.net (Steve Rigby) dissertated the following:

In 1996 the military vote was largely republican because of Bob Dole, NOT Bush. They know how many are registered overseas, they have no idea how many actually voted, hence, no idea how many to expect. The ballot must be postmarked on or prior to the 7th for it to count.

I have 4 spare mics laying around and often run onto older 4 pin mic. cb's.
I was wondering if anyone would be so kind as to lead me to a place on the
net that would have the configurations for particular cb brands ? These are
the older 4 pin square configurations. Let say for these brands
Cobra,Midland,Kraco, Royce and STB.
Thanks for your time,
Speedy

I am looking for some opinions on the best vertical antenna for my base. I have
been told the I-Max 2000 is a very good antenna with great SWR and performance
across the whole 11 meter band. I have looked at the A-99, which I can get for
the same price as the I-Max 2000, but it would include the radial kit (Less
than $70 from Copper), but I have heard that the A-99's don't stand up more
than a few years and that they have a tendancy to fall apart...

Any opinions via EMAIL would be greatly appretiated!

I quit putting too much faith in the mainstream media here CD, but, yea, it appears as of this morning he picked up 19 more votes in those precincts getting hand counted. Personally, I think both parties knew it would be close and had a failsafe type plan, or de facto escape route, ballot stuffing, ballot losing, if you would. Bush can recount as well, think he has to the 17th to request it. Mexico, hmm? Yea, the country has some really nice places and possibilities, maybe that's what we're gonna have to do just for the privilege of being left alone!

The FCC does WHAT it wants, WHEN it wants in regards to anything under their jurisdiction.

> It would be some Amateur station making the broadcast. If the message
> was legally sent, the Amateur would identify his station at least once
> every 10 minutes.

1st, for an Amateur, AM would be an illegal mode at 28.085... 2nd, the station DID identify itself as an "FCC monitoring station".

> By the way, how do you know it was Hollingsworth's voice?

I've heard him speak in person, as well as in the Rain Report's weekly FCC update (available on-line)... it WAS his voice.... Granted, a recording, but HIS voice. I doubt an Amateur station COULD fake what I & several others in my area heard.

Source record: 59022

Of course they are, you will see that 1.5 Khz is in the middle of the audio passband 0-3Khz.

Do not confuse setting a passband with setting a freq. The carrier freq is fixed except in FM, in the FM mode the reference freq is set to the channel freq and then varied around that freq at an audio rate.

Go back to your Sam and follow from the oscillator to the final, in the sideband mode the carrier reference is the same as on AM, it is simply suppressed in the balanced modulator. Next the unwanted sideband is filtered out. The adjustments you have eluded to simply sets the passband of the desired sideband. Hope that helps.

Subject: Only in America

Joe Smith started the day early, having set his alarm clock(made in Japan)
for 6:00 AM.

While his coffee pot (made in Japan) is perking.

He puts his blow dryer (made in Taiwan) to work

and shaves with his electric razor (made in Hong Kong)

He puts on a dress shirt (made in Taiwan)

His designer jeans (made in Singapore)

and a pair of tennis shoes (made in China)

After cooking up some breakfast in his new electric skillet (made in the
Philippines)

he sits down to figure out on his calculator (made in Mexico)
how much he can spend today.

After setting his watch (made in Switzerland)

to the radio (made in Hong Kong)

and checking his day planner (made in China)

he goes out, gets in his car (made in Germany),

fills up with gas (made in Kuwait) and goes out looking as he has been for
months, for a good paying American job.

After the end of another discouraging and fruitless day, Joe decides to relax
for a while.

He puts on a pair of sandles (made in Brazil)

pours himself a glass of wine (made in France)

grabs a piece of fruit (made in Mexico)

and turns on the TV (made in Japan)

listens to Bill Clinton (elected by Chinesse money)

and ponders again why he can't find a good paying AMERICAN JOB

5107. HUMOR (Dating vs. marriage)

Newsgroup: rec.radio.cb
Date: 2000-11-12 00:00:00 UTC
From: bobr19@aol.com
Message-ID: <20001112150909.07548.00000022@ng-co1.aol.com>
Source record: 59029

Dating vs. Marriage

Dating...Farting is never an issue
Marriage....You make sure there's nothing flammable near your mate.....ever

Dating...He takes you out to have a good time
Marriage....He brings home a six pack and asks what are you going to drink

Dating.... He holds your hand in public
Marriage...You usually have to go looking for him in public

Dating... A single bed for two isn't THAT bad
Marriage... A king size bed feels like an Army cot

Dating....You are turned on at the sight of each other naked
Marriage ...You think each other have to go on a diet.

Dating.....You enjoy foreplay
Marriage.... You tell each other, if we have sex, will you leave me alone

Dating... He hugs you for no reaso
Marriage... He grabs your tits any chance he gets

Dating... You picture the two of you growing old together
Marriage...You wonder who will die first

Dating...Just looking at each other makes you feel all mushy
Marriage...The sight of each other makes you want to kill something

Dating... You go to the movies a lot
Marriage....You wait till it's on HBO

Dating....You like to discuss things
Marriage....You develop a blank stare

5108. Re: FCC broadcast on 10m

Newsgroup: rec.radio.cb

Cap'n,

Thanks for telling me basically what the gist was. I wish I could've heard it. I don't normally go down that far in the 10 meter band unless I am working CW. I've known for some time that they were going to do something about the 10 meter "bandits", just not when or what. Having met him and heard Mr. Hollingsworth discuss this in a forum, I do know he is pretty irked about this. The enforcement(?) will likely come in stages. Like you said, this was a shot across the bow. We'll just have to wait and see what happens next.

Best 73

Jerry

: Fwd: The Friendly Skies

The plane's cabin was being served by an obviously gay flight attendant who was just as obviously enjoying himself. He came swishing down the aisle and said to the man and the woman seated beside him, "Captain Marvey has asked me to announce that he'll be landing the big scary plane shortly, lovely people, so if you could just put up your trays that would be super."

On his trip back up the aisle, he noticed that the woman hadn't moved a muscle. "Perhaps you didn't hear me over those big brute engines. I asked you to raise your trazy-poo so the main man can pitty-pat us on the ground."

She calmly turned her head and said, "In my country, I am called a Princess. I take orders from no one!"

"Well, sweet cheeks, in my country, I'm called a Queen so I outrank you. Put up the tray, bitch!"

Mr. Hollingsworth isn't concerned about enforcement outside the US as you correctly state he has zero enforcement power there. However he is does have enforcement power in the US and is concerned about the US operators who are operating illegally in the 10 meter band and will be doing something about it.

28.0 to 29.7 is AMATEUR worldwide under the treaty. All signing nations have a duty to enforce the rules in their own country, aid other countries in enforcement efforts, and use the ITU as a conduit to complain. It may very well be that other countries are bitching thru the ITU about lax American enforcement. Nothing ignorant or arrogant about it.

From: Dave or Debby <truth@planetc.com>
Message-ID: <3a0f14da@news.planetc.com>
Source record: 59049

You Super Techs out there--I have a hard one for you. Last PM I saw noise come over a CB when the stereo or CD was on, like little sparks of audio comming over the CB. CB antenna was grounded & matched good and the AM/FM antenna was mounted on fiberglass and not grounded. We tried another CB & same problem. It had an external amp for the stereo, which was grounded. Have you seen this & what will fix it? E mail me with answer or post.
Thanks!
Dave

Don't know what the radio is worth, as I am not familiar with it. Maybe someone here can give you a ballpark appraisal. If the mic is indeed a "special edition" and is in excelent or near-mint condition, I'd sell the mic separately and start the bidding at 50 or 60 bucks. Don't worry, it will go up. My ³ç and that's about it!

Too Many Radios,

If this was done, I am certain that it was aimed at the "truckers" who have "landed" on 28.085. They can clearly be heard down/up there on that frequency. They are domestic truckers, and that would be what Mr. Hollingsworth is after. It has nothing to do with what is "world-wide", just US stations operating where they are not supposed to be. I am pretty sure that, as has been stated here before, the 10 meter line will be defended. After all, if they don't, the folks will just move farther and farther afield. I think, from what I've heard, that this is what FCC is thinking about by moving to "head 'em off at the pass". LOL!

Do you really think the FCC would bother going after mobile truckers
on 28.085? Talk about a waste of tax payer money and time. They are
only attempting to scare away intruders. There will be no realistic
effort to physically stop truckers in violation.

5145. Re: SSB Offset question and Superstar 3900 clarifier question

Newsgroup: rec.radio.cb
Date: 2000-11-12 00:00:00 UTC

Again, I think this is just a different way of saying/thinking the
same thing. Regardless, the frequency at tp1 in a 148/grant changes
with the mode, and that difference is 1.5Khz between USB and AM, and
another 1.5Khz between AM and LSB. This is also the point at which the
PDC-256 frequency counter is inserted, and the PDC-256 shows the freq
change between the modes.

-SSB

On or about Sun, 12 Nov 2000 13:42:42 -0500, "Fred Hambrecht"
<Fred@w4jle.com>, using the forum rec.radio.cb did say:

:Of course they are, you will see that 1.5 Khz is in the middle of the audio
:passband 0-3Khz.
:
:Do not confuse setting a passband with setting a freq. The carrier freq is
:fixed except in FM, in the FM mode the reference freq is set to the channel
:freq and then varied around that freq at an audio rate.
:
:Go back to your Sam and follow from the oscillator to the final, in the
:sideband mode the carrier reference is the same as on AM, it is simply
:suppressed in the balanced modulator. Next the unwanted sideband is filtered
:out. The adjustments you have eluded to simply sets the passband of the
:desired sideband. Hope that helps.

I say it once again you are a true dumbass, I bet you only say this after you look over your shoulder to see if there is a black man around, if not then you say it.

...Good Ole' WWCR..... I figured that shortwave broadcast station would fold up once all the people who bought supplies for the 'Y2K Meltdown' realized they'd been ripped off. Wonder how many actually bought the $4000 'one year supply' of freeze dried food and survival supplies? .....Just outta' curiosity... what's the newest 'disaster/apocalypse' WWCR's sellin' now?

I don't believe the message was intended for the DX audience.. they've been
making noise for some time now about problems on 10m here within the US.
